ASSIGNMENT MESSAGE:
Conduct an in-depth investigation of the ATV fatality reported in the attached document using the *ATV Investigation Guideline* of **Appendix 91**. If you have any special concerns about this investigation, please do not hesitate to call your headquarters contact.

A narrative write-up for this IDI is not required (including both ATV and UTV incidents), provided the DRS is completed. If both an ATV and a UTV are involved in the incident being investigated, then both the ATVD and UTVD DRS should be completed. An on-site investigation is not required for either ATVs or UTV incidents.

If the vehicle involved is a Utility Vehicle [UTV] or Recreational Off-highway Vehicle [ROV] (e.g., the vehicle has a steering wheel, seatbelt or other restraint, , roll bar, cargo bed, foot pedals, or bench or bucket seats or side-by-side seating, excluding dune buggies and golf carts), use the Utility Vehicle Guidelines provided at the end of Appendix 91. UTVs are also known as "side-by-side ATVs" indicating that the seating is side-by-side instead of straddle.

Below is a list of vehicle make and models where the vehicle is not an ATV and the UTV investigation guidelines should be used. Please note this is not a comprehensive list of all makes and models of UTVs, but a list to help facilitate the identification of common UTVs.
