To Whom It Concerns,

Too much data of or about a person harbored in one place is risky. What can help you can also hurt you. If you want more biometric data then I recommend finding a way to "partition the data" so it does not all reside within a single file. If and when your system is compromised by hackers they may get some data but not all of the data. Never assume you won't be hacked. Always assume you will be hacked. Further, whatever password protection you internally employ to gain access to the data should have layers of permission required to obtain the most critical or most sensitive biometric data. Possibly two different level people required to access all the biometric data on one person being required. A new social security number can possibly be assigned if stolen, but new finger prints cannot be.

Sincerely,

Wm Earl Finley, BS, MS, C.P.M., A.P.P.
