This questionnaire asks for information including:

- The characteristics of the school;
- The student body;
- The school's resources;
- Staffing;
- The organization of the school;
- The environment in the curriculum;
- Career guidance and preparation of students for further education.

This information helps illustrate the similarities and differences between groups of schools in order to better establish the context for students' test results. For example, the information provided may help to establish the impact of resource distribution on student achievement – both within and between countries.

### **What is meant by “science?”**

PISA is an international study, and in order to make comparisons between students and schools in different countries, it is necessary to have a common definition of ‘science’. For the purpose of this questionnaire, science refers only to the core science subjects of physics, chemistry, earth science and biology either taught in your curriculum as separate science subjects, or taught within a single ‘integrated-science’ subject. It does NOT include related subjects such as engineering, technology, mathematics, psychology, economics, nor possible earth science topics included in geography courses. If in doubt as to whether a school subject other than physics, chemistry, earth science, biology or integrated-science is science or not, treat the subject as NOT being science.

### **The questionnaire should be completed by the principal or designate.**

It should take about 30 minutes to complete.

If you do not know an answer precisely, your best estimate will be adequate for the purposes of the study.

A number of questions refer to tenth grade. If you do not have a tenth grade at your school then answer these questions for grade nine (or grade eight if you do not have grades nine or ten).

**Your answers will be kept confidential. They will be combined with answers from other principals to calculate totals and averages in which no one school can be identified.**

**Q27 To what extent do you feel that teachers in your school concentrate on developing in students the skills and knowledge that will help them progress towards science-related careers?**

*Science-related career has been used here to include careers that involve a considerable amount of science but are beyond the traditional idea of a scientist as someone who works in a laboratory or academic environment (like a nuclear physicist). As such, a science-related career is not only one in physics, chemistry or biology. Any career that involves postsecondary education in a scientific field is considered science-related. Therefore careers like engineer (involving physics), weather forecaster (involving earth science), optician (involving biology and physics), and medical doctors (involving the medical sciences) are all examples of science-related careers.*

*(Please check only one box)*

These skills and knowledge are not a major part of teachers' pedagogical activities <sub>1</sub>
