

Explanation of Difference in Proposed Burden Hours

The 2007 ICB proposed revision of 67,600,000 burden hours for Form 8913 could not be attained as requested. Form 8913 contains a worksheet with burden computations, also.

The combined total hours for the worksheet and the form, using the Arthur D. Little (ADL) database, resulted in a total of 67,608,000 burden hours. Using the variables from the ADL formula would not achieve the *exact* revised hours.
