- MA314Q: No changes were recommended.
- MA321T: A representative from Forest Service suggested a definitional change in Section 3. The **Old Version**, Section 3 – Report the total quantity of each species of lumber, sawed ties, and timbers produced from roundwood in this mill in thousands of board feet. Report the production in terms of net shippable volume. If you ship finished lumber, adjust green production per shipments or sales; that is, deduct losses during kiln drying, planing, cutting, and other grading and finishing operations. The **New Version**, Section 3 – Report the total quantity of each species of lumber, sawed ties, and timber produced from roundwood in this mill in thousands of board feet green tally. This new version will be adopted.
