pounouripprovi	al for NPS- Sponsored Public Surveys
Project Title Submission Date:	Grand Teton National Park Non-Motorized Survey 2010 June 2, 2010
. Abstract:	Goals of this survey are to learn about non-motorized visitors' trip characteristics and perceptions and to assist park management with issues related to the new non-motorized facilities in the park. Grand Teton National Park's (GRTE) main transportation corridors were designed primarily for motor vehicle travel. In 2008 and 2009, a 7.7-mile segment of paved multi-use pathways separate from the roadway was built. The pathways will be used by bicyclists, pedestrians, and other non-motorized travelers along Teton Park Road, representing a major change to the park's infrastructure. This survey will be administered to GRTE non-motorized travelers along the new pathways and the adjacent Teton Park roadway. (not to exceed 150 words)

Project Information Park(s) For Which Research Grand Teton National Park is to be Conducted: 08/29/2010 (mm/dd/yyyy) **Survey Dates:** 07/16/2010 (mm/dd/yyyy) to Type of Information Collection Instrument (Check ALL that Apply) ×On-Site □ Telephone **Focus Groups** Mail-Back Face-to-Questionnaire **Questionnaire** Face Survey Interview Other (explain) 8. **Survey Justification:** Social science research in support of park planning and management is mandated in (Use as much space as the NPS Management Policies 2006 (Section 8.11.1, "Social Science Studies"). The needed; if necessary include NPS pursues a policy that facilitates social science studies in support of the NPS additional explanation on a mission to protect resources and enhance the enjoyment of present and future separate page.) generations (National Park Service Act of 1916, 38 Stat 535, 16 USC 1, et seq.). NPS policy mandates that social science research will be used to provide an understanding of park visitors, the nonvisiting public, gateway communities and regions, and human interactions with park resources. Such studies are needed to provide a scientific basis for park planning, development.

Background and Literature Review. The 2006 Transportation Plan for Grand Teton National Park (GRTE) proposed 22.5 miles of multi-use pathways for non-motorized travelers. The first 7.7 miles of pathways between Dornan's and South Jenny Lake, completed in 2009, represents a major change to the park's infrastructure. This survey data will be collected from non-motorized travelers using the pathway and adjacent roadway corridor to help park managers understand issues associated with the new infrastructure and document visitors' perceptions of their park experiences.

Recent visitor surveys completed in GRTE include a Visitor Services Project survey (OMB 1024-0224, NPS 08-131) completed in July 2008. This was a general visitor survey. Non-motorized traveler counts and visitor transportation surveys were completed in GRTE in 2007 (Gleason and McGowen, 2009) to learn about travel patterns and visitors perceptions prior to pathway construction (OMB 1024-0224, NPS07-043). None of these surveys contained information related to non-motorized traveler use on the newly constructed pathways. There have not been any visitor surveys to collect data on pathway travelers' since pathways were completed in 2009. This proposed 2010 survey will be the first to collect such data.

- 9. Survey Methodology: (Use as much space as needed; if necessary include additional explanation on a separate page.)
- (a) Respondent universe: GRTE visitors (age 18 and older) who are traveling by a non-motorized mode on Teton Park Road and the adjacent pathways between Dornan's and South Jenny Lake Junction during July and August 2010. The sampling unit is a group of visitors (such as family or friends traveling together).
- (b) Sampling plan/procedures: Two sampling periods are planned for summer 2010, both from Friday through Sunday. Survey data will be collected for 8 hours during the peak periods at intervals throughout the daylight hours near South

Jenny Lake Junction, Taggart Lake parking lot, and near the Craig Thomas Discovery and Visitor Center area. Two groups of 2 researchers each will distribute surveys to non-motorized travelers. Most non-motorized travelers are expected to be using the new pathway, but some may be on the shoulder of the adjacent Teton Road. Both types of visitors will be intercepted. (c) Surveyors will approach every group if possible and every 3rd group if it is a very busy day and ask the eligible group member with the next birthday to complete the survey. Groups that pass by while a surveyor is engaged with a contacted group will not be sampled. It can be difficult to collect survey data from road bikers who are traveling fast along the roadway shoulder, thus signs will be placed along the roadway north and south of the surveyors to encourage bicyclists to stop for the survey. Drinks and snacks will be provided. Signs will also alert motorists to the activity. (d) Instrument administration: A table and chairs will be set up at each survey location. Researchers will approach bicyclists and pedestrians and use the following script to invite survey participants: "Good morning (afternoon), my name is _____. I'm with the Western Transportation Institute and we are working with Grand Teton National Park to learn about non-motorized travel in the park. Could you take 10 minutes to answer some questions today? This survey is voluntary and completely anonymous. Thank you!" Respondents will be given a clipboard, survey, and a pen. Respondents will be able to sit at tables to fill out survey with researchers available to answer questions. Detailed maps will be available as a reference. (e) Expected response rate/confidence levels: Response rates depend on a number of variables; including weather conditions during the sampling event, visibility of surveyors, and time availability and interest of visitors. Surveyors will provide water and snacks at the tables to encourage visitors to stop and complete a survey and maximize response rates. The response rate for a 2007 transportation survey in the park was 64% (OMB 1024-0224, NPS 07-043). Given appropriate conditions, a response rate of 64% is expected for this survey. With 382 completed surveys, we will achieve confidence interval at the 95% level of +/-5%. (f) Strategies for dealing with potential non-response bias: Based on the information collected in the survey log (attached), a non-response bias analysis will be completed. Respondents will be compared with non-respondents on observable characteristics, including transportation mode (foot vs. bicycle), group size, presence/absence of children, weekday, and month. The implications of any nonresponse bias for interpreting results will be discussed in the report. (g) Description of any pre-testing and peer review of the methods and/or instrument (recommended): This survey was revised and shortened based on feedback from the 2007 Grand Teton National Park non-motorized traveler survey. TT Estimated Time to 10 12. Total 74 Complete Initial Burden Contact | Instrument Hours: (mins.):

Total Number of Initial Contacts | **Expected Respondents:**

597	382

13.	Reporting Plan:	Survey results will be compiled, analyzed and presented in a report that will be submitted to GRTE officials by December 2010. Analyses will include frequency tabulations, measures of central tendency, and comparisons between bicycle and foot travelers. A copy of the report will be sent to the NPS Social Science Division to be archived in the Social Science Studies Collection.

The Western Transportation Institute at Montana State University is administering this survey on behalf of Grand Teton National Park. This information will be used to help park managers better understand bicycle and pedestrian issues in the park. Participation in this survey is strictly voluntary.
