**Justification for Change (1010-0057)**

With this submission, we are requesting an adjustment change. During routine program correspondence, it became evident that MMS has not adequately covered the burden for § 250.301(a). Under regulations, both current and past, it states that “Drilling or production facilities shall be inspected daily or at intervals approved or prescribed by the District Manager ... Records ... shall be maintained ... at a nearby manned facility ...” Up to this point, we have only covered the burden for manned facilities (1,000). We are adjusting this burden to include the unmanned facilities (3,000), since respondents have always complied with the regulatory requirement. Therefore, we are requesting an adjustment increase.
