## Hepatitis Notification Message Mapping Guide

### Hepatitis Notification Message Mapping Guide

**VERSION: The version of this Message Mapping Guide is Draft 0.5 dated 6/20/2007.**

This Message Mapping Guide describes the content and message mapping specifications for the fixed set of data elements used to communicate information to meet the requirements for Hepatitis case notification reporting to CDC. The intended audience for this document are the state/local and CDC programs and other public health related organizations interested in using the HL7 V2.5 case notification message specification for transmitting their data elements.

Version 1.0 of the *Message Specification Guide* is used to inform the mapping methodology for this guide NND Mapping Guide version for 1.1.5 sp1 of NEDSS Base System. Last updated 11/29/2006.

#### Understanding the Organization of the Mapping Guide

<a href="#">Revisions</a>	This tab is intended to provide revision control for updates made to the document.
<a href="#">Data Element Index</a>	This tab provides the complete list of data elements of interest requested by the program. The last column cross-references to the tab where the data element is fully specified for messaging.
<a href="#">Key</a>	Key to columns in each Mapping Worksheet
<a href="#">Subject-related</a>	This tab provides the mapping methodology for the demographic variables requested by the program.
<a href="#">Generic Obs.</a>	This tab provides the content for the generic investigation questions. The ones that are not used for Hepatitis reporting are greyed out.
<a href="#">HEP GEN</a>	Every Hepatitis condition is reported using the Generic Observations plus these Hepatitis Generic data elements. When the condition is one of those below, no further data elements are included: <ul style="list-style-type: none"><li>• 10480—Hepatitis, non A, non B, acute</li><li>• 10102—Hepatitis Delta co- or super-infection, acute (Hepatitis D)</li><li>• 10103—Hepatitis E, acute</li><li>• 10120—Hepatitis, viral unspecified</li></ul>
<a href="#">Hep A-Acute</a>	10110 Hepatitis A, acute is reported using the generic data elements plus this set of condition-specific elements
<a href="#">Hep B-Acute</a>	10100 Hepatitis B, acute is reported using the generic data elements plus this set of condition-specific elements
<a href="#">Hep C-Acute</a>	10101 Hepatitis C, acute is reported using the generic data elements plus this set of condition-specific elements
<a href="#">Hep C-Infection</a>	10106 Hepatitis C infection, past or present is reported using the generic data elements plus this set of condition-specific elements.
<a href="#">Hep B-Perinatal</a>	10104 Hepatitis B, virus infection perinatal is reported using the generic data elements plus this set of condition-specific elements.
<a href="#">Associated Lab Report</a>	This tab provides the content requested by the program for use with a Hepatitis associated laboratory report.
<a href="#">Notification Structure</a>	This tab provides the structural elements for the Notification. These variables are not negotiable. Default values are provided for HL7 structural elements that are required but not part of the surveillance data requested.

#### Variables as Observations

# Attachment 1F

## Hepatitis Notification Message Mapping Guide

Other than the variables that map to the Patient Identifier segment (see Subject-Specific tab), all other variables are passed as a series of OBX-Observation/Result segments that are logically tied to the OBR-Observation Request “section header” segment that immediately precedes it. This content presents the real differences between the messages since all types of Notifications are handled in a standard manner up to this point.

Column	Description
<b>Program Variables Section</b>	
PHIN Variable ID	PHIN element UID drawn from the coding system PH_PHINQuestions_CDC
Label	Short name for the data element, which is passed in the message.
Description	Description of the data element as in PHIN Questions.
Data Type	Data type for the variable response expected by the program area
Prog. Req/Opt	Indicator whether the program specifies the field as: <b>R</b> - Required - mandatory for sending the message <b>O</b> - Optional - if the data is available it should be passed
May Repeat	Indicator whether the response to the data element may repeat. "Yes" in the field indicates that it may; otherwise, the field is not populated. Repeats require special processing.
Value Set Name	Name of the pre-coordinated value set from which the response is drawn. The value sets and coding systems are accessible via the Public Health Information Network Vocabulary Access and Distribution Services at <a href="http://www.cdc.gov/PhinVSBrowser/StrutsController.do">http://www.cdc.gov/PhinVSBrowser/StrutsController.do</a> .
Data Validation	Business rules used for validating data integrity.
<b>Message Mapping Methodology Section</b>	
Message Context	Specific HL7 segment and field mapping for the element.
HL7 Data Type	HL7 data type used by PHIN to express the variable.
HL7 Usage	Use of the field for PHIN. Indicates if the field is required, optional, or conditional in a segment. The only values that appear in the Message Mapping are: <ul style="list-style-type: none"> <li>• R – Required. Must always be populated</li> <li>• O – Optional. May optionally be populated.</li> </ul>
HL7 Cardinality	Indicator of the minimum and maximum number of times the element may appear. <ul style="list-style-type: none"> <li>• [0..0] Element never present.</li> <li>• [0..1] Element may be omitted and it can have at most, one Occurrence.</li> <li>• [1..1] Element must have exactly one Occurrence.</li> <li>• [0..n] Element may be omitted or may repeat up to n times.</li> <li>• [1..n] Element must appear at least once, and may repeat up to n times.</li> <li>• [0..*] Element may be omitted or repeat for an unlimited number of times.</li> <li>• [1..*] Element must appear at least once, and may repeat unlimited number of times.</li> <li>• [m..n] Element must appear at least m, and at most, n times.</li> </ul>

## Hepatitis Case Notification Message Mapping Guide

This is the set of variables that may be passed if the Case Notification has an associated Vaccine event report. Vaccine reports are not required to be included with the Notification.

If present, each vaccine event is carried under a segment header with OBR-4 of 'VACRPT'.
