Respondent Burden

The 2010 Decennial Census Local Update of Census Addresses (LUCA) Program

The Local Update of Census Addresses (LUCA) Program is an integral part of the 2010 Census activities that utilizes the expertise of tribal, state, and local governments to improve the accuracy and completeness of the address list used to take the census.

The U.S. Census Bureau invited the chief executive/highest elected official of your tribal government to participate in this program. Your tribal government selected Option 1, Title 13 Full Address List Review, computer-readable format. This option allows you to:

- Review the Census Bureau's address list for your reservation and/or off-reservation trust lands including **city-style**¹ and **noncity-style**² residential addresses.
- Comment on any single or multiunit structure or **group quarters**³ city-style address in a census block on the address list using add, correct, delete, correction, not in jurisdiction, or nonresidential action codes and identify (flag) group quarters addresses.
- Challenge the count of addresses for any census block on the address count list.

¹ The term **city-style address** is defined as an address that consists of a house number and street or road name, for example, 201 Main Street. However, the address may or may not be used for the delivery of mail, and may include apartment numbers/designations or similar identifiers. *See Chapter 2 for a complete definition.*

² The term **noncity-style address** is defined as a mailing address that does not use a house number and street or road name. This includes rural routes and highway contract routes, which may include a box number, post office drawers, or general delivery. *See Chapter 2 for a complete definition.*

³ A **group quarters** is a place where people live or stay that is normally owned or managed by an entity or organization providing housing and/or services for the residents. *See Chapter 2 for a complete definition.*

- For census blocks containing all noncity-style addresses, you can challenge **only the count of addresses** for census blocks on the Census Bureau's address count list; you **cannot** comment on individual noncity-style addresses.

Note: *For census blocks with a mix of city-style and noncity-style addresses, you may comment on individual city-style addresses **or** challenge the count of addresses for the census block, but cannot do both within the same block. However, it is to your benefit and the Census Bureau's that you provide city-style address updates wherever applicable, rather than challenging the count of addresses in a census block.*

- Identify any additions, deletions, or corrections to boundaries, roads, or other physical features on the Census Bureau paper maps or submit an updated version of the digital map file (shapefile) provided by the Census Bureau.

Background

The Census Address List Improvement Act

The Census Address List Improvement Act of 1994 (Public Law 103-430) strengthened the Census Bureau's partnership capabilities with tribal, state, and local governments by expanding the methods the Census Bureau could use to exchange address information. Designed to improve the accuracy of the Census Bureau's address list, the Act authorized the Census Bureau to provide individual addresses to officials of tribal, state, and local governments who agreed to conditions of confidentiality. Census 2000 marked the first decennial census for which the Census Bureau could provide its address list for review to governments that signed the required confidentiality agreement. (*See Appendix A for the terms of the LUCA Program Confidentiality and Security Guidelines.*)

The Census Bureau's Master Address File (MAF)

In preparation for Census 2000, the Census Bureau created the Master Address File (MAF) by merging the 1990 Address Control File⁴ with the latest version of the U.S. Postal Service's (USPS) Delivery Sequence File⁵ (DSF). The MAF is a nationwide database of all addresses used to support many of the Census Bureau's operations. Besides containing mailing addresses and ZIP Codes, an address record in the MAF also contains geographic information about the location of addresses. In areas where there are noncity-style addresses (e.g.,

⁴ The 1990 residential address list used to label questionnaires, control the mail response check-in operation, and determine the nonresponse follow-up workload.

⁵ A computerized file containing all delivery point addresses serviced by the U.S. Postal Service (USPS). The USPS updates the DSF continuously as its letter carriers identify addresses for new delivery points or changes in the status of existing addresses.

rural route or post office box number), the address record may contain additional information such as a location description.

The Topologically Integrated Geographic Encoding and Referencing (TIGER®) Database

Address records in the MAF are linked to feature segments in the Topologically Integrated Geographic Encoding and Referencing (TIGER®) database. The TIGER® database includes the geographic coordinates and names of all streets, water features, and other linear features, and boundaries for all jurisdictions and statistical areas (census tracts⁶, census blocks⁷, etc.) used to tabulate decennial census data. The TIGER® database also includes address ranges⁸ along streets that have city-style addresses and the hierarchy of census geographic area codes from the tribal level down to individual census blocks (www.census.gov/geo/www/geodiagram.html). By linking address records in the MAF to the TIGER® database, the Census Bureau is able to identify street segments along which an individual address exists and determine the geographic code that applies to that address.

The Census Bureau's Geography Division regularly updates the MAF/TIGER database from various sources. In addition to the USPS DSF, other sources of updates include current household surveys, special censuses, and local sources.

LUCA Program Responsibilities

Census Bureau's LUCA Program Responsibilities

The Census Bureau's LUCA program responsibilities include:

- Provide training to LUCA Program participants.
- Provide the necessary materials to participants.
- Provide technical assistance.
- Process updates submitted by LUCA participants.
- Conduct a 100% Address Canvassing (field check) operation. The Census Bureau will visit each census block within your reservation and/or off-reservation trust land during this operation to update our address list and validate your LUCA submissions.

⁶ A **census tract** is a small, relatively permanent statistical division of a county or statistically equivalent entity, delineated for the purpose of presenting Census Bureau statistical data.

⁷ A **census block** is a geographic area bounded by visible features, such as streets, roads, streams, and railroad tracks, and invisible features, such as the boundaries of governmental units and other legal entities. Census blocks are the smallest area for which the Census Bureau collects and tabulates statistical information.

⁸ **Address ranges** are the lowest and highest address numbers used to identify structures along each side of a street segment that has city-style addresses. Usually one side of the street has even address numbers and the other side has odd address numbers.

- Provide feedback materials for your review.
- Provide assistance to participants to resolve any address discrepancies.
- Provide for a formal appeal of disputed addresses by an independent federal agency outside of the Census Bureau and the Department of Commerce.

Participant's LUCA Program Responsibilities

As participants in the LUCA program, your responsibilities include:

- Select your LUCA tribal liaison and reviewers. *(The Census Bureau suggests that individuals in your reservation and/or off-reservation trust land involved in zoning enforcement not work on this program since this may create a conflict of interest.)*
- Sign and return the Registration Form.
- All tribal liaisons, reviewers, and anyone with access to Title 13, United States Code (U.S.C.) materials must read, understand, and agree to abide by the Census Bureau's Confidentiality and Security Guidelines *(See Appendix A for the terms of the LUCA Program Confidentiality and Security Guidelines)*.
- All tribal liaisons, reviewers, and anyone with access to Title 13 materials must sign and return to the Census Bureau the Confidentiality Agreement Form.
- Complete and return the Self-Assessment Form.
- Complete and return the Participation Option/Product Preference form.
- Ensure that everyone working on the LUCA program understands the procedures for participating in the program and Census Bureau terminology and concepts.
- Keep Census Bureau addresses, and maps showing structure points⁹, (housing units and group quarters locations) confidential and ensure their use only for census purposes. *(Although structure points are not displayed on the LUCA materials during the LUCA review phase, they will be provided for the Feedback phase of the program.)*
- Ensure the receipt of all required materials for the LUCA program review.
- Prepare a strategy to conduct the review of LUCA materials.
- Within 120 calendar days of receiving your LUCA materials, complete your address list review and return your updated materials to the Census Bureau.

⁹ A **structure point** is a coordinate location that represents the location of one or more housing units and/or group quarters. Structure points are protected by Title 13. *See Appendix A, Confidentiality and Security Guidelines.*

- Review the Census Bureau’s detailed feedback materials.
- Appeal address discrepancies to the LUCA Appeals Office within 30 calendar days of receipt of feedback materials.
- After the appeals process is complete, return to the Census Bureau or destroy all Title 13 materials.
- The LUCA tribal liaison must verify the return or destruction of Title 13 materials by signing and returning to the Census Bureau the Return or Destruction of Title 13, U.S.C. Materials form.
- All LUCA program reviewers must sign and date the Return or Destruction of Title 13, U.S.C. Materials form.

Training and Technical Support

Census Bureau staff will conduct LUCA training workshops beginning in August of 2007. These training workshops will provide you with hands-on experience in using the 2010 Decennial Census LUCA Program materials. In addition, computer-based training (CBT) is available on the LUCA Program CBT CD-ROM and the LUCA Web site at www.census.gov/geo/www/luca2010/luca.html.

Should you need additional information, please contact your Census Bureau Regional Office toll free at 1-866-511-LUCA (5822) or for technical assistance about computer applications including the MAF/TIGER Partnership Software (MTPS), please call the Help Desk toll free at 1-866-919-LUCA (5822).

Schedule

January–February 2007	LUCA advance notification letters and information materials were mailed to the chief executive/highest elected officials and other tribal contacts in all federally recognized American Indian reservations.
March–June 2007	LUCA Promotional Workshops were conducted.
August 2007	LUCA invitation letters and registration materials were mailed to the chief executive/highest elected officials and a courtesy copy to other tribal contacts in all federally recognized American Indian reservations.
August 2007-January 2008	Invited tribal governments register for LUCA and the Census Bureau mails LUCA review materials to each participating government.

August 2007	LUCA Training Workshops begin.
September 2007–March 2008	LUCA participants review and update the address list and return their comments to their Census Bureau’s Regional Office within 120 calendar days from the receipt of materials.
October 2007–October 2008	Census Bureau reviews participant’s LUCA submissions and updates the MAF/TIGER database.
November 2008–June 2009	Census Bureau prepares for and conducts an Address Canvassing Operation using GPS-equipped hand held computers.
August 2009–October 2009	Census Bureau provides feedback materials to participants showing how we processed each participant’s LUCA submissions.
September 2009–December 2009	Participants review feedback materials and have the opportunity to appeal the results to the LUCA Appeals Office.
September 2009–January 2010	LUCA Appeals Office reviews and adjudicates appeals.

Respondent Burden

The Census Bureau estimates that it will take between 105 and 1,575 hours to complete the LUCA review depending on the number of addresses and rate of address growth and change. This includes the time needed to read the invitation materials and complete the registration forms, and upon receipt of the LUCA materials, to read the instructions, assemble and review the LUCA materials, and provide updates.

Please send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to:

Paperwork Project 0607-0795
4600 Silver Hill Road, Room 3K138
Washington, DC 20233.

Or you may e-mail comments to <paperwork@census.gov>; use "Paperwork Project 0607-0795" as the subject. Please include a copy of your message addressed to <luca@geo.census.gov>.

Under the paperwork Reduction Act, the Census Bureau cannot ask you to respond to a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. The OMB number is found in the upper right corner of each LUCA form.

CHAPTER 2 BEFORE YOU BEGIN YOUR REVIEW

Introduction
What is a Housing Unit?
What are Group Quarters?
Unacceptable Types of Housing Units and Group Quarters
Census Bureau Addresses
Census Tract
Census Block
What is Geocoding?
Strategies for Reviewing the Census Bureau's Address List
Address Sources

Introduction

Chapter 2 explains some of the terms and concepts used by the Census Bureau and recommended strategies for your LUCA review. Refer to the *Glossary* or visit the Census Bureau's Web site at <www.census.gov> for additional terms and definitions.

What is a Housing Unit?

A single-family house, townhouse, mobile home, trailer, apartment, group of rooms, or a single room occupied as a separate living quarters or, if vacant, intended for occupancy as a separate living quarters. A separate living quarters is one in which one or more occupants (or intended occupants, if vacant) live separate from any other individual(s) in the building and have direct access to the living quarters without going through another living quarters, such as from outside the building or through a common hall.

The following types of housing units are acceptable and should be included on the address list you submit to the Census Bureau:

- Houses, including townhouses, condominiums, and apartments.
- Living quarters within an otherwise nonresidential structure such as an apartment within a church, school, or business.
- Mobile homes or trailers occupied as separate living quarters, or if vacant, intended for occupancy as separate living quarters.
- Any housing units under construction that will be habitable (closed to the elements with final roof, windows, and doors) on Census Day, April 1, 2010.

What are Group Quarters?

A place where people live or stay, in a group living arrangement, that is owned or managed by an entity or organization providing housing and/or services for the residents. This is not a typical household-type living arrangement. These services may include custodial or medical care as well as other types of assistance, and residency is commonly restricted to those receiving these services. People living in group quarters are usually not related to each other.

The following types of group quarters are acceptable and should be included on the address list you submit to the Census Bureau:

- Correctional facilities.
- Juvenile facilities.
- Nursing homes.
- Hospitals with long-term care facilities.
- College or university dormitories, fraternities, sororities.
- Dormitories for workers.
- Religious group quarters.
- Shelters.
- Group homes.
- Any group quarters under construction that will be habitable (closed to the elements with final roof, windows, and doors) on Census Day, April 1, 2010.

Note: Housing units and group quarters can exist within the same structure.

Unacceptable Types of Housing Units and Group Quarters

Exclude the following unacceptable types of housing units and group quarters addresses from your address list:

- Condemned or scheduled for demolition.
- Being converted or remodeled for nonresidential purposes.
- Used solely for nonresidential storage.
- Used solely as offices or businesses in which no one is living.
- Used solely for ceremonial purposes.
- Under construction and will **not** be habitable (closed to the elements with final roof, windows, and doors) on Census Day, April 1, 2010.

Census Bureau Addresses

Residential and Nonresidential Addresses

The Census Bureau divides all addresses in two use types, residential and nonresidential. Residential addresses are addresses of housing units and/or group quarters where one or more people could live. Nonresidential addresses are addresses of a structure or unit within a structure that do not serve as a residence, such as commercial establishments, schools, government offices, and churches.

Some structures can contain both residential and nonresidential units, even though they have a single address such as an apartment over a store or a home with an office.

Address Formats

City-Style Address Format

The Census Bureau classifies housing units and group quarters that have a house number and street name address as city-style addresses. Examples of city-style addresses include 212 Morning Star Road or 137 Eagle Lane, Apt. 316. In some instances, the house number may also include an alpha character such as W9254. These addresses are used for mailing or to provide location for emergency services, such as police, fire, and rescue (E-911 addresses).

City-style addresses for housing units in multiunit structures, such as apartment buildings, contain a unit designator, for example, Apt 101 or Suite D or a location designator such as “rear” or “basement” (Refer to *Appendix D, Unit Designation Abbreviations*). The Census Bureau and the USPS treat these designators as part of the housing unit address, and they are included in each affected census address record.

Noncity-Style Address Format

The Census Bureau classifies addresses that do not include a house number and/or a street name as noncity-style addresses. Noncity-style addresses also may **not include a complete** house number and street name address. The majority of noncity-style addresses are located in the more sparsely settled areas of the United States; however, they may exist in small- or medium-sized towns as well. Frequently used noncity-style mailing addresses include:

- General delivery.
- Rural route and box number.
- Highway contract route and box number
- Post Office box only delivery.

Noncity-style addresses often do not follow any numeric sequence, and may not be associated with the name of the street or highway on which they are located. For this reason, the Census Bureau uses different methods to compile the list of addresses for inclusion into the address list, such as location descriptions (BRICK HSE w/ATTACHED GARAGE ON RIGHT), structure points (geographic coordinates), and census geographic codes (**state code, county code, census tract number, census block number**).

Census Tract

Census tracts are small, relatively permanent statistical subdivisions of a county or statistically equivalent entity, delineated for presenting Census Bureau statistical data.

The proposed criteria for Census tracts for the 2010 Census is that they contain a minimum of 1,200 people with an optimal population of 4,000.

Census tract boundaries are delineated with the intention of being stable over many decades, so they generally follow relatively permanent visible features. However, they may follow governmental unit boundaries and other non-visible features in some instances. Census tract boundaries never cross state or county (or statistically equivalent entity) boundaries.

Each census tract has a unique number and contains numerous census blocks. Census tract numbers contain up to a 4-digit number followed by a decimal point and a 2-digit number for suffixed tracts, e.g., 1234.01. For census tracts without a suffix, the number will contain a period with zero fill, e.g., 4567.00. Leading zeros are not shown on Census Bureau materials.

Note: *When using the Census Bureau shapefiles to geocode an address to a Census Tract number, use the Tractlabel attribute field on the curtracts (current tracts) shapefile.*

Census Block

A census block is an area bounded by visible features such as streets, roads, streams, and railroad tracks and non-visible features such as the boundaries of governmental units and other legal entities. A block is the smallest geographic area for which the Census Bureau collects and tabulates statistical data.

Census blocks may look like a city block or may be large and irregularly shaped, depending upon features. The boundary of a state or a county is always a block boundary.

Census blocks are numbered within census tracts and are unique to the census tract to which they belong. Census block numbers contain a 4-digit number,

and may include a single alpha character suffix reflecting a boundary change or added feature (e.g. 3001A and 3001B).

Note: The 2010 Census LUCA Program addresses are coded to **current** census block/geography.

What is Geocoding?

In order to process your address submissions, the Census Bureau **requires** the inclusion of **census geographic code information**. This link to census geography is referred to as geocoding. Geocoding places an individual address in its correct geographic location, which includes the correct **state, county, census tract, and census block** codes.

Because the Census Bureau counts people where they live, census geographic code information or geocodes support the systematic collection of data that allows Census enumerators to locate an address. They are also important in allocating data from questionnaire responses to the correct location. You **must include census geographic code information** for the Census Bureau to process your address submissions. The Census Bureau will not accept addresses without census geographic codes (geocodes) including the **state, county, census tract, and census block** codes.

You can find these census geographic codes on your LUCA materials.

Note: *When using the Census Bureau shapefiles to geocode an address to a Census Tract number, use the Tractlabel attribute field on the curtracts (current tracts) shapefile.*

Strategies for Conducting the LUCA Program Review

You must decide for yourself how to conduct the LUCA program review. Consider your available time, the information you have readily available, and the staff and computer resources you have. If resources are limited, the Census Bureau recommends focusing on areas where addresses are more likely to be missed or incorrect. For example:

- Areas of new housing construction.
- E-911 address conversion areas.
- Areas that have changed from single-family homes to multi-family homes and vice versa.
- Warehouses that have been converted to residential lofts.
- New mobile home parks or new scattered mobile homes.
- Apartment buildings with irregular or missing numbering schemes for the individual units.

- Newly acquired trust land.
- Addresses near governmental boundaries.

Address Sources

There are many possible sources of address information. Some of these sources may not match the Census Bureau's address list exactly, but they are a good indication of where change is taking place and can help you identify addresses that you need to add to the address list. The following list provides suggestions for address source materials:

- New housing construction or building permits (include units that are under construction only if final roof, doors, and windows will be in place on Census Day, April 1, 2010).
- E-911 address files.
- Housing inspection records.
- Planning or zoning records.
- Tribal utility records.
- School enrollment records.
- Voter registration files.

CHAPTER 3 THE LUCA PROGRAM'S COMPUTER-READABLE ADDRESS LIST AND ADDRESS COUNT LIST

Introduction
Protecting Census Bureau Address Information
The File Names
Software Requirements
Opening the Files
The File Formats

Introduction

The Census Bureau's address list and address count list files for your reservation and/or off-reservation trust land are included on your CD-ROM. This chapter discusses how you must protect the Census Bureau's computer-readable address information and explains the:

- File names and formats.
- Software requirements.
- How to open the files.

Protecting Census Bureau Address Information

The most efficient method to review and match your tribe's address list to the Census Bureau's address list is to copy the address file onto a computer hard drive or a network server in a useable format. You must first ensure the protection of the Census Bureau's Title 13, U.S.C. address information including your Census Bureau computer-readable address file, all address list paper copies, and maps (including copies) containing structure points. (*Structure points will be displayed on the address list and maps, where applicable, for the Feedback phase of the program.*) For detailed information see *Appendix A, Confidentiality and Security Guidelines*.

The LUCA tribal liaison must restrict access to confidential Census address information to only those individuals who have signed the Confidentiality Agreement. This includes all reviewers and anyone with access to Title 13 materials (*See Appendix A for the terms of the Confidentiality and Security Guidelines*). If you need to add additional reviewers during your LUCA review, a blank Confidentiality Agreement Form is included in *Appendix B*. Be sure additional reviewers have read and understand the Confidentiality and Security Guidelines, *Appendix A*, before signing and returning the Confidentiality Agreement Form to the Census Bureau.

Operating systems, programs, applications, and data related to the review of Census Bureau addresses must be accessible only to LUCA program tribal liaisons and reviewers. The automated data processing (ADP) system should

restrict the read, write, delete, and execute functions applicable to the Census Bureau's address information.

The ADP system must use log-on routines that require a user-ID and password that conform to the following guidelines:

- **Assign** a unique user-ID and password for each LUCA Program liaison and reviewer.
- Passwords **must consist** of at least eight (8) nonblank characters consisting of at least one alphabet letter and either one number or one special character (\$, *, &). No more than six consecutive characters (AAAAAA) may appear in the password, and then only once.
- **Reject** passwords that are the same as the user-ID or used within the last 6 months.
- **Encrypt** passwords.
- **Disable** passwords after three bad attempts.
- **Do not display** passwords on terminals or printers.
- **Change** passwords every 90 days (more frequent change is optional) or immediately, if compromised.
- On new accounts, **change the assigned** password to a unique password the first time users log on.
- The ADP system **must display** a warning log-on feature. Computer screens must display a warning that states:
****WARNING*WARNING*WARNING****
YOU HAVE ACCESSED A COMPUTER SYSTEM CONTAINING UNITED STATES GOVERNMENT INFORMATION. USE OF THIS COMPUTER WITHOUT AUTHORIZATION OR FOR PURPOSES FOR WHICH AUTHORIZATION HAS NOT BEEN EXTENDED IS A VIOLATION OF FEDERAL LAW AND CAN BE PUNISHED BY FINE OR IMPRISONMENT (Public Law 99-474). ALL USE MAY BE INTERCEPTED, MONITORED, RECORDED, COPIED, AUDITED, INSPECTED AND DISCLOSED TO AUTHORIZED LAW ENFORCEMENT OFFICIALS. REPORT SUSPECTED VIOLATIONS TO YOUR AGENCY SECURITY OFFICER. USE OF THIS SYSTEM INDICATES YOU CONSENT TO THIS WARNING. LOG OFF IMMEDIATELY IF YOU DO NOT AGREE TO THE CONDITIONS OF THIS WARNING.
****WARNING*WARNING*WARNING****
- If you place Census Bureau address information on a shared computer system, **construct electronic security profiles** to allow only the LUCA tribal liaison and reviewers access to the Census Bureau's address information. **Test your security** to ensure that only the LUCA

tribal liaison and reviewers are permitted access to the Census Bureau's address information.

- **Lock all rooms** containing computers and all associated media during non-work hours.
- **Do not leave** computers with Census Bureau address information unattended during work hours. **Log-off** the computer or **lock** the room whenever you leave.
- **Label** any computer diskettes, CD-ROMs, DVDs, tapes, cartridges or other computer storage media containing Census Bureau address information with the following:
“This document contains information the release of which is prohibited by Title 13 U.S.C. and is for Bureau of the Census official use only.”
- If backup is necessary, **do not send** the tapes, cartridges, or disks off-site. **Store** them in a secured area. **Do not mix, store, or back-up LUCA data with other data.**
- **Clear** magnetic media (tapes, disks, hard drives) containing Census Bureau address information before reuse. To clear magnetic media, overwrite all Title 13 data three times at a minimum using a commercial disk utility program or degauss using a commercial degausser.
- **Program** any software you develop for displaying the Census Bureau addresses to label each affected page of a printout containing Census Bureau address information with the following:

“This document contains information, the release of which is prohibited by Title 13 U.S.C. and is for Bureau of the Census official use only.”

The File Names

The **address list (AL)** file contains all of the residential addresses currently recorded by the Census Bureau for your reservation and/or off-reservation trust land. The **address count list (ACL)** file contains the residential address counts for each census block within your reservation and/or off-reservation trust land. The name of each of the files is:

1. **Address List**–LUCA_AL_TRxxxxTAyyyy.txt
2. **Address Count List**–LUCA_ACL_ TRxxxxTAyyyy.txt

The file's name contains your **Entity ID Code**, a unique identification code assigned by the Census Bureau to your tribe and associated geographic area. This fixed length alphanumeric code is composed of 12 characters.

The tribal code is 6 characters:

- **TR** + a 4-digit numeric code
 - **TR0013**, and

the tribal geographic area code is 6 characters:

- **TA** + a 4-digit numeric code
 - **TA0185**.

Below is an example of a tribal identification code and its associated geographic area:

TR0013TA0185

- TR0013 represents the Utu Utu Gwaitu Paiute Tribe of the Benton Paiute Reservation, and
- TA0185 represents Benton Paiute Reservation, the geographic area associated with the Utu Utut Gwaitu Pauite Tribe.

Examples:

Address List File Names

An example of an address list file name is:

LUCA_AL_TR0016TA1475.txt,

where

TR0016 represents the Seminole Tribe,
and

TA1475 represents the Hollywood Reservation, the geographic area associated with the Seminole Tribe.

Address Count List File Names

An example of an address count list file name is:

LUCA_ACL_TR0022TA0305.txt,

where

TR0022 represents the Blackfeet Tribe of the Blackfeet Indian Reservation,
and

TA0305 represents the Blackfeet Reservation, the geographic area associated with the Blackfeet tribe.

Software Requirements

The files you receive are pipe-delimited ASCII text files, meaning they can be viewed and read as letters and numbers with a text editor. All spreadsheet and database programs can read and understand these text files.

Many commercial spreadsheet and database programs can open the LUCA files. Use spreadsheet programs such as Microsoft Excel or Lotus 123 to open, view, and edit small files. For larger files, use a database program such as Corel Paradox, QuattroPro, Microsoft Access, or dBase¹⁰.

Note: Some computer programs that can open and view pipe-delimited text files **cannot** save an edited file in the correct format. Make sure your program has the ability to save or export a file with pipe-delimited fields. Call the Help Desk toll free at **1-866-919-5822** if you need assistance or more information.

Opening the Files

Refer to the readme.txt file for instructions on opening the encrypted self-extracting address list and the address count list. A case-sensitive password is required to open the file. The Census Bureau will mail the password to you, separate from your LUCA materials.

- The Census Bureau recommends that you make a copy of each of the files and place them on the hard drive of a computer that is password protected. This will preserve the original files should you need to look at an original record or require another original copy of the file.
- To help keep your work organized, create a new directory or new folder on your hard drive. Copy the files from the CD-ROM into that directory or folder.
- When you open the text files with your application, some spreadsheets and databases will prompt you to supply some information about the file. Be prepared to provide the application program with the following:
 - Fields are **delimited**.
 - Delimiter is a **pipe symbol (|)**
 - Text qualifier is **none**.
 - All field types are **text**.

¹⁰The Census Bureau does not endorse or recommend the use of any specific software to view its files. The program names included here are only examples of programs that are able to read computer-readable files.

- It is **critical** that you define all field types as “**text**” including numeric fields such as census tract number, census block number, ZIP Code, and so forth.
- If you need assistance or more information, call the Help Desk toll free at **1-866-919-5822**.

The File Formats

Address List

The Census Bureau's address list contains all of the residential (city-style and noncity-style) addresses known to the Census Bureau within your reservation and/or off-reservation trust land. It also contains census geographic codes (state, county, census tract, census block) that indicate the location of each address.

Each address record in the address list file is a maximum of 466 characters and contains 28 fields of information. The character length of each record may vary. The first row, or header row, of the address list file displays the field names for each data column in the file.

Each address record contains the following fields:

1. **Entity ID Code**—Your Entity Identification Code represents your tribe's name and associated geographic area (reservation and/or off-reservation trust land, where applicable). This fixed length alphanumeric code is composed of 12 characters. Do not edit the Entity ID Code for existing address records. You must include your Entity ID Code on all new records that you add to the Census Bureau's address list.
2. **Line Number**—sequential number for each address record in the file. This field is prepopulated.
3. **MAFID**—unique control number (maximum character length is 9 characters) assigned to each MAF address. Do not edit this field.
4. **Action Code**—edit this field to record the type of change when an update is made to the address list, including:
 - Address adds.
 - Address corrections.
 - Address deletes.
 - Not in jurisdiction addresses.
 - Nonresidential addresses.
5. **State Code**—2-digit current state code assigned to your reservation and/or off-reservation trust land. You may edit this field to record your correct state code.

6. **County Code**—3-digit current county code assigned to your reservation and/or off-reservation trust land. You may edit this field to record your correct county code.
7. **Census Tract Number** Census tract numbers contain up to a 4-digit number followed by a decimal point and a 2-digit number for suffixed tracts, e.g., 1234.01. For census tracts without a suffix, the number will contain a period with zero fill, e.g., 4567.00. You may edit this field to record correct census tract numbers.

Note: *When using the Census Bureau shapefiles to geocode an address to a Census Tract number, use the Tractlabel attribute field on the curtracts (current tracts) shapefile.*

8. **Census Block Number**—Census block numbers contain a 4-digit number plus one alpha character, if applicable, e.g. 3001A. You may edit this field to record correct census block numbers.
9. **Tribal Subdivision Code**—3-digit unique number assigned by the Census Bureau to a legal subdivision of a federally-recognized American Indian reservation, off-reservation trust land, or Oklahoma tribal statistical area. Do not edit this field.
10. **Trust Land?**—displays a “Y” for addresses that are associated with a federally recognized individual and tribal off-reservation trust land. Do not edit this field.
11. **Group Quarters Flag**—displays a “Y” for addresses that are considered group quarters, such as nursing homes or dormitories. You may edit this field for group quarters addresses.

Note: If you enter a “Y” in the **Group Quarters Flag** field, you **must** provide a group quarters name in the **Location Description or GQ Name** field. The Census Bureau will not process an identified group quarters address record without a group quarters name.

12. **House Number**—housing unit or group quarters assigned house number, which can contain numbers, letters, hyphens, or other characters, e.g., 2718, 1002-3. You may edit this field to record correct house numbers.
13. **Street Name Prefix Qualifier**—examples include, EXT, ALT, BUS, OLD, such as **ALT** Rt 30 or **OLD** Eagle Rd. You may edit this field.
14. **Street Name Prefix Direction**—examples include, N, W, SE, such as **N** Elm St or **SE** Fox Dr. You may edit this field.
15. **Street Name Prefix Type**—examples include, HWY, RT, US, such as **HWY** 154 or **RT** 222. You may edit this field to record correct house numbers.

16. **Street Name**—full street or road name such as **APPLE BLOSSOM** or **9th**. You may edit this field to record correct street names.

Note: Census blocks within your reservation and/or off-reservation trust land that contain no addresses known to the Census Bureau will contain the following statement in the **Street Name** field:

“NO KNOWN ADDRESSES IN THIS BLOCK”

Do not edit records for addresses containing these statements.

17. **Street Name Suffix Type**—examples include, ST, CT, AVE, DR, such as Jefferson **ST** or Winterberry **DR**. You may edit this field.
18. **Street Name Suffix Direction**—examples include, N, W, SE, such as Cherry Dr **S**. You may edit this field.
19. **Street Name Suffix Qualifier**—examples include, EXT, ALT, BUS, such as 6th St **EXT**. You may edit this field.
20. **Location Description or GQ**—description of a living quarters (e.g., Grey Brick Ranch w/White Shutters) or name of group quarters (e.g. Winona Hall).

Note: If you enter a “Y” in the **Group Quarters Flag** field, you **must** provide a group quarters name. The Census Bureau will not process an identified group quarters address record without a group quarters name.

If the value in the **Group Quarters Flag** field is blank, do not edit or add values in the **Location Description or GQ Name** field.

21. **Apartment/Unit Number**—within structure descriptor or identifier. This column may contain apartment unit numbers such as **APT 5** or location designator such as **1st FL FRNT**. (*See Appendix D, Unit Designation Abbreviation Examples.*) You may edit this field to correct and record apartment/unit numbers. You may edit this field to correct or record apartment or unit numbers.
22. **City-Style Mailing ZIP Code**—5-digit ZIP Code for city-style mailing addresses. You may edit this field.
23. **Noncity-Style Mail Delivery Address (RR#, HCR#, or PO BOX#)**—identifies noncity-style mail deliver address such as rural route and box number, post office box number, etc. Do not edit this field.
24. **Noncity-Style Mailing ZIP Code**—5-digit ZIP Code for noncity-style mailing addresses. Do not edit this field.
25. **Structure Point**—4-digit number plus one alpha character assigned by the Census Bureau to a structure that contains a housing unit or

a group quarters address. This field will be blank for the review phase of the LUCA program but will be provided for the Feedback phase of the program. Do not edit this field.

26. **Structure Latitude**—This field will be blank for the Review phase of the LUCA program but will be provided for the Feedback phase of the program. Do not edit this field.

27. **Structure Longitude**—This field will be blank for the Review phase of the LUCA program but will be provided for the Feedback phase of the program. Do not edit this field.

28. **City-Style Address Flag**— records with a **City-Style Address Flag** value of “Y” can be updated. Records with a **City-Style Address Flag** value of “N” cannot be updated.

Note: This field will be blank if “NO KNOWN ADDRESSES IN THIS BLOCK”. Do not edit this field. (*The Census Bureau will not process updates to address records containing an “N” in the City-Style Address Flag column.*)

More information is included in the table on the next page.

Computer-Readable Address List File Record Layout

Figure 3.1: Computer-Readable Address List File Record Layout

Maximum Character Length	Field Name	Description/Notes
12	Entity ID Code	Unique identification code assigned by the Census Bureau to each tribe and reservation (and/or off-reservation trust land).
7	Line Number	Sequential number for each address record in the file
9	MAFID	Unique control number assigned to each MAF address
1	Action Code	Blank field. Valid codes: A, C, D, J, N, entered by the participant.
2	State Code	2-digit Current State Code
3	County Code	3-digit Current County Code
7	Census Tract Number	Up to 4-digit Census Tract Number, plus 2-digit number suffix, if applicable, includes a period for suffixed tracts. If no suffix, includes period and zero fill.
5	Census Block Number	4-digit Current Census Block Number, plus one alpha character suffix, if applicable.
3	Tribal Subdivision Code	3-digit unique number assigned by the Census Bureau to a legal subdivision of a federally-recognized American Indian reservation, off-reservation trust land, or Oklahoma tribal statistical area.
1	Trust Land?	Displays a "Y" for addresses that are associated with a federally recognized individual and/or tribal off-reservation trust land.
1	Group Quarters Flag	Displays a 'Y' if the unit is a group quarters.
35	House Number	Housing unit's or group quarters' assigned house number
3	Street Name Prefix Qualifier	e.g., EXT, ALT, BUS, OLD
2	Street Name Prefix Direction	e.g., N, W, SE
14	Street Name Prefix Type	e.g., HWY, RT, US
100	Street Name	Full street or road name.
14	Street Name Suffix Type	e.g., ST, CT, AVE, DR
2	Street Name Suffix Direction	e.g., N,W, SE
3	Street Name Suffix Qualifier	e.g., EXT, ALT, BUS
100	Location Description or GQ Name	Description of living quarters (Grey Brick Ranch w/White Shutters) or name of group quarters (Winnona Hall)
53	Apartment/Unit Number	Within structure descriptor or identifier, such as APT 5 or 1 st FL FRNT
5	City-Style Mailing ZIP Code	5-digit ZIP Code for city-style mailing addresses
50	Noncity-Style Mail Delivery Address	Rural route and box number, post office box number, etc.
5	Noncity-Style Mailing ZIP Code	5-digit ZIP Code for noncity-style mailing address
5	Structure Point	4-digit number plus one alpha assigned by the Census Bureau to structures (RR, PO Box #, General Delivery, etc.)
11	Structure Latitude	Structure Latitude
12	Structure Longitude	Structure Longitude
1	City-Style Address Flag	Displays "Y" if city-style address, an "N" if noncity-style address.

Example – Pipe-Delimited Address List File – City-Style Address

The following is an example of how the information may appear in the address list file before importing the file using your software program. The example is a city-style address, 1010 Main Street, located in South Dakota, and has a city-style zip code, 56424.

Note that the “Y” in field 28 indicates that this is a city-style address.

```
TR0042TA0605|107|123456789|46|041|9415.00|1026| ||Y |1010| || |MAIN|ST| || |56424| || |
|Y
```

Figure 3.2 displays the data in the appropriate fields.

Figure 3.2: Pipe-Delimited LUCA Program Address List File – City-style Address

Field Number	Field Name	Example
1	Entity ID Code	TR0042TA0605
2	Line Number	107
3	MAFID	123456789
4	Action Code	Blank
5	State Code	46
6	County Code	041
7	Census Tract Number	9415.00
8	Census Block Number	1026
9	Group Quarters Flag	Blank
3	Tribal Subdivision Code	Blank
1	Trust Land?	Y
10	House Number	1010
11	Street Name Prefix Qualifier	Blank
12	Street Name Prefix Direction	Blank
13	Street Name Prefix Type	Blank
14	Street Name	MAIN
15	Street Name Suffix Type	ST
16	Street Name Suffix Direction	Blank
17	Street Name Suffix Qualifier	Blank
18	Location Description or GQ Name	Blank
19	Apartment/Unit Number	Blank
20	City-Style Mailing ZIP Code	56424
21	Noncity-Style Mail Delivery Address	Blank
22	Noncity-Style Mailing ZIP Code	Blank
23	Structure Point	Blank
24	Structure Latitude	Blank
25	Structure Longitude	Blank
26	City-Style Address Flag	Y

Address Count List

The address count list contains the number of housing unit and group quarters addresses on the address list for each census block within your reservation and/or off-reservation trust land. Use the address count list to identify inconsistencies between the Census Bureau's housing unit and/or group quarters address counts and your housing unit and/or group quarters address counts.

Each block record in the address count list file is a maximum of 57 characters and contains nine (9) fields of information. The character length of each record may vary. The first row, or header row, of the address count list file displays the field names for each data column in the file. See *Figure 3.4* for the address count list file record layout.

1. **Entity ID Code**—Your Entity Identification Code represents your tribe's name and associated geographic area (reservation and/or off-reservation trust land, where applicable). This fixed length alphanumeric code is composed of 12 characters. Do not edit the Entity ID Code for existing address records. This field is prepopulated and cannot be edited.
2. **State Code**—2-digit current state code assigned to your reservation and/or off-reservation trust land. This field is prepopulated and cannot be edited.
3. **County Code**—3-digit current county code assigned to your reservation and/or off-reservation trust-land. This field is prepopulated and cannot be edited.
4. **Census Tract Number**—Contains up to a 4-digit number followed by a decimal point and a 2-digit number for suffixed tracts, e.g., 1234.01. For census tracts without a suffix, the number will contain a period with zero fill, e.g., 4567.00. This field is prepopulated and cannot be edited.
5. **Census Block Number**—Contains a 4-digit number plus one alpha character, if applicable, e.g. 3001A. This field is prepopulated and cannot be edited.
6. **Census Count of Housing Unit Addresses**—Census Bureau's most recent count of housing unit addresses within your reservation and/or off-reservation trust land. This field is prepopulated and cannot be edited.
7. **Tribal Count of Housing Unit Addresses**—this field is blank to record your count of housing unit addresses if there is a discrepancy between the Census Bureau's count of housing unit addresses and your count of housing unit addresses.

8. **Census Count of Group Quarters Addresses**—Census Bureau’s most recent count of group quarters addresses within your reservation and/or off-reservation trust land. This field is prepopulated and cannot be edited.
9. **Tribal Count of Group Quarters Addresses**— this field is blank to record your count of group quarters addresses if there is a discrepancy between the Census Bureau’s count of group quarters addresses and your count of housing unit addresses.

Example –Address Count List File Record Layout

Figure 3.4: Address Count List File Record Layout

Maximum Character Length	Field Name	Description/Notes
12	Entity ID Code	Unique identification code assigned by the Census Bureau to each tribe and reservation (and/or off-reservation trust land).
2	State Code	2-digit State Code
3	County Code	3-digit County Code
7	Census Tract Number	Up to 4-digit Census Tract Number, plus 2-digit number suffix, if applicable, includes a period for suffixed tracts. If no suffix, includes period and zero fill
5	Census Block Number	4-digit Current Census Block Number, plus one alpha character suffix, if applicable
7	Census Count of Housing Unit Addresses	Census Bureau’s most recent count of housing unit addresses within your reservation and/or off-reservation trust land
7	Tribal Count of Housing Unit Addresses	Blank field to record your most recent count of housing unit addresses.
7	Census Count of Group Quarters Addresses	Census Bureau’s most recent count of group quarters addresses within your reservation and/or off-reservation trust land
7	Tribal Count of Group Quarters Addresses	Blank field to record your most recent count of group quarters addresses.

The last row records the total number of Census Blocks, Census Bureau Housing Unit Addresses, and Census Bureau Group Quarters Addresses on the address count list. ***You do not need to record your totals.*** See *Figure 3.5* for the “Total Row” Layout.

Figure 3.5: Address Count List File “Total Row” Layout

Maximum Character Length	Field Name	Description/Notes
7	Census Tract Number	The word “Total” appears in this column
5	Census Block Number	Total number of Census Blocks on the address count list
7	Census Count of Housing Unit Addresses	Total number of Census Bureau housing unit addresses on the address count list
7	Tribal Count of Housing Unit Addresses	Blank. You do not need to record your totals.
7	Census Count of Group Quarters Addresses	Total number of Census Bureau group quarters addresses on the address count list
7	Tribal Count of Group Quarters Addresses	Blank. You do not need to record your totals.

Example – Pipe-Delimited Address Count List File

Figure 3.6 is an example of how the information may appear in the address count list file before importing the file using your software program. This example entity ID code TR0042TA0605, is located in California state code 06, and county code 099. There are 765 housing unit addresses and three (3) group quarters addresses in Census Tract 0064.02, Census Block 3015.

TR0042TA0605|06|099|0064.02|3015| 765| |3|

Figure 3.6: Pipe-Delimited Address Count List File

Address Count Record	Field Name
TR0042TA0605	Entity ID Code
06	State Code
099	County Code
0064.02	Census Tract Number
3015	Census Block Number
765	Census Count of Housing Unit Addresses
Blank	Tribal Count of Housing Unit Addresses
3	Census Count of Group Quarters Addresses
Blank	Tribal Count of Group Quarters Addresses

CHAPTER 4 REVIEWING AND UPDATING THE ADDRESS LIST FILE

Action Codes for Updating Address List File

- A–Adding Addresses
- C–Correcting Addresses
- D–Deleting Addresses
- J–Not in Jurisdiction Addresses
- N–Nonresidential Addresses

Saving the File

Action Codes for Updating the Address List File

This chapter provides instructions on making updates to the computer-readable address list. (*Please refer to Chapter 6 for instructions for updating corresponding paper maps or feature shapefiles.*)

There are five action codes you can use to make updates to the address list:

- A–Add
- C–Correction
- D–Delete
- J–Not in Jurisdiction
- N–Nonresidential

You can add or make updates to **city-style** addresses¹¹ only. You must include the appropriate action code with each address record that you add or update. The Census Bureau will only process those address records that contain an action code.

Note: If you know the city-style address for a noncity-style address on the address list, **do not attempt to correct the address**. Instead, add the correct city-style address to the address list as described in the following section, *A – Adding Addresses*.

A–Adding Addresses

Use the “A” Action Code to add only **city-style** addresses for your reservation and/or off-reservation trust land not shown on the Census Bureau’s address list.

Note: You must provide the correct census geographic codes (**i.e., state code, county code, census tract number, and census block number**)

¹¹For census blocks containing all **noncity-style** addresses, you can only challenge the count of addresses for census blocks. For census blocks containing a mix of city-style and noncity-style addresses, you can only update the individual city-style address(es) or challenge the count of addresses for the entire census block; you **cannot** do both. See Chapter 5.

when adding an address record. The Census Bureau **will not accept** addresses without census geographic codes.

1. Create a new record or start/insert a new row.
2. Enter an “A” in the **Action Code** field.
3. Enter the required address information in the appropriate fields for each new address:

- a. Entity code.
- b. State code.
- c. County code.
- d. Census tract number.

Note: When using the Census Bureau shapefiles to geocode an address to a Census Tract number, use the *Tractlabel* attribute field on the *curtracts* (current tracts) shapefile.

- e. Census block number.
- f. Group quarters flag (*if applicable*).

(i.) Enter a “Y” in the **Group Quarters Flag** field for a group quarters address.

Note: If you enter a “Y” in the **Group Quarters Flag** field, you must provide a group quarters name in the **Location Description or GQ Name** field. The Census Bureau will not process an identified group quarters address record without a group quarters name.

- g. House number.
- h. Street name prefix qualifier.
- i. Street name prefix direction.
- j. Street name prefix type.
- k. Street name.
- l. Street name suffix type.
- m. Street name suffix direction.
- n. Street name suffix qualifier.
- o. GQ name (*if applicable*).

(i.) Add the name of the group quarters in the **Location Description or GQ Name** field.

Note: If you enter a “Y” in the **Group Quarters Flag** field, you must provide a group quarters name. The Census Bureau will not process an identified group quarters address record without a group quarters name.

- p. Apartment/unit number (*if applicable*).

To add apartment/unit numbers or mobile homes whether occupied or vacant, use the following procedure:

- (i.) Create one record for *each individual unit* and add each individual unit designator, if known.
- (ii.) If the apartment/unit designators are unknown, but you know the number of units at the multiunit structure, enter “*#” in the **Apartment/Unit Number** field for each unit added.

The “*” character will alert the Census Bureau that the actual unit identifiers are unknown and that we need to obtain further information during our field check of the address. The “#” is the sequential number, i.e., 1,2,3,4, etc.

For example, the new multiunit structure located 505 Frontier Blvd, contains 20 units. You don’t know the actual individual unit numbers or designators, but you know there are 20 units:

- (1.) Create 20 records with the correct census geographic codes (i.e., **state code, county code, census tract number, census block number**) and the street address, 505 Frontier Blvd.
- (2.) For each unit added at 505 Frontier Blvd, enter in sequence, the appropriate “*#” in the **Apartment/Unit Number** field.

For example, for the first unit added at 505 Frontier Blvd, enter “*1” in the **Apartment/Unit Number** field; for the second unit record added, enter “*2” in the **Apartment/Unit Number** field, and so on, until you get to the twentieth unit record, where you enter “*20” in the **Apartment/Unit Number** field.

- q. City-style mailing ZIP Code (*if the address is a mailing address*).

If applicable, add new streets or other map features on the Census Bureau map(s) as shown in *Figure 6.3, Adding a New Street on the Paper Map*, or in the Shapefiles section of Chapter 6.

C–Correcting Addresses

Enter a “C” in the **Action Code** field for the following situations and

replace all incorrect census geographic codes (i.e., **state code, county code, census tract number, and census block number**) and/or address information with the correct information:

- a. Incorrect state code.
- b. Incorrect county code.
- c. Incorrect census tract number.

Note: *When using the Census Bureau shapefiles to geocode an address to a Census Tract number, use the Tractlabel attribute field on the curtracts (current tracts) shapefile.*

- d. Incorrect census block number.
- e. Incorrect house number.
- f. Incorrect street name prefix qualifier.
- g. Incorrect street name prefix direction.
- h. Incorrect street name prefix type.
- i. Incorrect street name.
- j. Incorrect street name suffix type.
- k. Incorrect street name suffix direction.
- l. Incorrect street name suffix qualifier.
- m. Incorrect group quarters name.
- n. Incorrect apartment/unit number.
- o. Incorrect ZIP Code.

Examples

The following scenarios provide examples for the most common corrections to the address list:

- 1. Correcting a street name.
- 2. Correcting the location of a street and its corresponding addresses.
- 3. Correcting an incorrect house number or an incorrect apartment/unit number.
- 4. Conversion of a single housing unit to a multiunit structure.
- 5. Conversion of a multiunit structure to a single housing unit.
- 6. Conversion of a group quarters to a single housing unit.
- 7. Conversion of a single housing unit to a group quarters.

1. Correcting a Street Name

The address list incorrectly shows C St instead of Cedar Dr, the correct street name.

- a. Enter a “C” in the **Action Code** field.
- b. In the **Street Name** field, delete C St for all of the affected addresses and enter Cedar Dr.

If necessary, correct the street name on the Census Bureau map(s) as shown in *Figure 6.4, Correcting a Street Name on the Paper Map* or in the Shapefiles section of Chapter 6, so that the maps match the new information on the address list.

2. Correcting the Location of a Street and its Corresponding Addresses

The address list shows 100 through 106 N Jefferson St as located in Census Block 2014. According to local sources, N Jefferson St is located in Census block 2015.

- a. Enter a “C” in the **Action Code** field.
- b. In the **Census Block Number** field, delete the incorrect census block number (2014) and enter 2015.

If applicable, correct the location of streets on the Census Bureau map(s) as shown in *Figure 6.5, Correcting the Location of a Street on the Paper Map*, or in the Shapefiles section of Chapter 6, so that the maps match the new information on the address list.

3. Correcting an Incorrect House Number or an Incorrect Apartment/Unit Number

Incorrect House Number:

The address list shows a house number as 102 Coolspring St. The house number is actually 1002.

- a. Enter a “C” in the **Action Code** field.
- b. Delete 102 and enter 1002.

Incorrect Apartment/Unit Number:

The A, B, and C apartment numbers for 1004 Coolspring St are incorrect. The apartment numbers are 1, 2, and 3.

- a. Enter a “C” in the **Action Code** field.
- b. Delete the A, B, and C in the **Apartment/Unit Number** field and enter 1, 2, and 3.

4. Conversion of a Single Housing Unit to a Multiunit Structure

The single housing unit at 1070 Main St is now a multiunit structure containing 10 apartments.

- a. Copy the corrected **original** address record as many times as needed for each additional unit, in this instance nine (9) since the original address already exists on the aDDRESS IIS_t. (*When copying an address record, delete the Line Number and MAFID before editing the record.*)
- b. Enter a “C” in the **Action Code** field for the original corrected address. Enter the first unit designator in the **Apartment/Unit Number** field. In this instance, number 1.
- c. *For each of the new nine (9) records at the original address:*
 - i. Enter an “A” in the **Action Code** field.
 - ii. Enter the unit designation in the **Apartment/Unit Number** field, if known.

(1) If the apartment/unit numbers are unknown, but you know the number of units at the multiunit structure, enter “*#” in the **Apartment/Unit Number** field for each unit added.

The “*” character will alert the Census Bureau that the actual unit identifiers are unknown and that we need to obtain further information during our field check of the address. The “#” is the sequential number, i.e., 1,2,3,4, etc.

- (2) For each unit added, enter in order, the appropriate “*#” in the **Apartment/Unit Number** field. For example, for the first unit added, enter “*2” in the **Apartment/Unit Number** field; for the second unit record added, enter “*3” in the **Apartment/Unit Number** field, and so on, until you get to the tenth unit record, where you enter “*10” in the **Apartment/Unit Number** field.

5. Conversion of a Multiunit Structure to a Single Housing Unit

The multiunit structure at 3010 1st Street has been converted to a single housing unit.

- a. Enter a “C” in the **Action Code** field for the *first* unit address record.
- b. Remove the unit designation in the **Apartment/Unit Number** field.
- c. For the remaining units, enter a “D” in the **Action Code** field. See the next section, *D–Deleting Addresses*.

6. Conversion of a Group Quarters to a Single Housing Unit

The group quarters at 4310 Washington St., Fair Haven Home, has been converted to a single housing unit.

- a. Enter a “C” in the **Action Code** field.
- b. Remove the “Y” in the **Group Quarters Flag** field.
- c. Remove the name of the group quarters, Fair Haven Home, in the **Location Description or GQ Name** field.

7. Conversion of a Single Housing Unit to a Group Quarters

The single housing unit located at 9430 Maple Ave has been converted to a group quarters, the Greenhill Home.

- a. Enter a “C” in the **Action Code** field.
- b. Enter a “Y” in the **Group Quarters Flag** field.

Note: If you enter a “Y” in the **Group Quarters Flag** field, you must provide a group quarters name. The Census Bureau will not process an identified group quarters address record without a group quarters name.

- c. Add the name of the group quarters in the **Location Description or GQ Name** field.

D–Deleting Addresses

Enter a “D” in the **Action Code** field. *Be very careful when using this action code.* Do not make corrections to any other fields.

Before deleting an address, ensure that the housing unit or group quarters does not exist, is uninhabitable, or is a duplicate address. Duplicate addresses are those that are incorrectly listed twice on the address list for the same residential address.

For example, the Census Bureau’s address list lists 1010 Bluebird St and 1010 S Bluebird St. Your tribe’s address sources indicate that there is a 1010 S Bluebird St but no 1010 Bluebird St. After confirming that 101 Bluebird St does not exist you would enter a “**D**” in the **Action Code** field for 1010 Bluebird St.

Note: Do not use the “**D**” action code for existing nonresidential addresses; instead, use the “**N**” nonresidential action code.

Example

1. Deleting Addresses That No Longer Exist

In this example, there are two streets and their associated addresses to delete.

- 1) All of the housing units along a portion of Hillsview Rd between Census Blocks 1005, 1007 and 1008 have been demolished, and this section of the street no longer exists.

Deleting the addresses on Hillsview Rd:

- a. Enter a D in the **Action Code** column for all of the addresses that have been demolished or no longer exist on Hillsview Rd.
 - b. *Do not make corrections to any other fields.*
- 2) All of the houses on Dakota St between Census Blocks 1002, 1003, 1004, and 1005 have been demolished. The entire street no longer exists.

Deleting the addresses on Dakota St:

- c. Enter a D in the **Action Code** column for all of the addresses that no longer exist on Dakota St.
- d. *Do not make corrections to any other fields.*

If necessary, make corrections to the map(s), as shown in *Figure 6.6, Deleting Streets on the Paper Map*, or refer to the Shapefiles section in Chapter 6, so that the maps match the new information on the address list.

J–Not in Jurisdiction Addresses

Enter a “**J**” in the **Action Code** field for addresses that are not on your reservation and/or off-reservation trust land. Do not make corrections to any other fields.

Example

The housing unit at 3107 1st Street is not on your reservation and/or off-reservation trust land.

- a. Enter a “J” in the **Action Code** field.
- b. *Do not make corrections to any other fields.*

N–Nonresidential Addresses

Enter an “N” in the **Action Code** field for addresses that are used for any purpose other than residential such as a business, church, school, government office, etc. Do not make corrections to any other fields.

Before entering an “N” action code, **ensure that the address does not contain a living quarters**. Some structures can contain both residential and nonresidential units even though they have a single address such as an apartment over a store or a home with an office.

Example

The housing unit at 3103 1st Street is now a business.

- a. Enter an “N” in the **Action Code** field.
- b. *Do not make corrections to any other fields.*

It is **very important** that you provide the correct census geographic codes, (i.e., **state code, county code, census tract number, census block number**) in the appropriate fields when updating the Census Bureau’s address list. Accurate information will enable the Census Bureau to be successful in finding addresses during our field verification operation.

Saving the File

Save the file frequently to avoid possible loss of work. In addition to saving the file often, you should back up the file each week. Do this in the event of hardware faults and/or software corruption. This process ensures that, at most, a week’s worth of work is lost.

When you have finished updating the address list file:

- Save to a new file **only those records that have an entry in the “Action Code” field** as a pipe-delimited, ASCII text file. *(If you need further instruction on saving a pipe-delimited, ASCII text file, please call the Help Desk toll free at 1-866-919-5822.)*

- Name the file containing your tribe's address list
TRxxxTAyyyy_LUAL.txt (*TRxxxTAyyyy is your entity identification code*) found on your LUCA materials.
 - Make a copy of your edited file to keep for your records and to use during the Feedback phase of the program.
 - All address list copies are Title 13 address information. **Keep all copies in a secure location.**
- * See Chapter 7 for preparing and submitting your Title 13 LUCA materials to the Census Bureau.**

Chapter 5

Reviewing and Updating the Address Count List File

- The Address Count List File
- Updating the Address Count List File
- Reviewing and Editing the Address Count List File
- Saving the File

The Address Count List File

The address count list file contains the count of housing unit and group quarters addresses on the address list for each census block within your reservation and/or off-reservation trust land. Use this list to challenge the count of addresses for any census block within your reservation and/or off-reservation trust land that you believe to be incorrect.

Updating the Address Count List File

If a census block contains a mix of city-style and noncity-style addresses, you can comment on the individual city-style addresses on the address list **or** challenge the count of addresses for the entire census block on the address count list, but you **cannot** do both within the same block.

If your address list and the Census Bureau's address list contain only noncity-style addresses for a census block, you can challenge the count of addresses for that block only if a discrepancy exists.

Note: It is to your benefit and the Census Bureau's that you provide city-style address updates wherever applicable, rather than challenging the count of addresses in a census block.

Reviewing and Editing the Address Count List File

Once you have successfully imported and opened the file (see Chapter 3, *Opening the Files*), review the Census Bureau's current housing unit address count for each census block within your reservation and/or off-reservation trust land. If there is a discrepancy between the Census Bureau's current housing unit address count and your tribe's address count for any census block, record the correct address count in the Tribal **Count of Housing Unit Addresses** column for that particular census block.

Record any discrepancy between the Census Bureau's current address counts for group quarters and your address counts for group quarters in the **Tribal Count of Group Quarters Addresses** column.

Example

The Census Bureau’s address count shows 765 housing unit addresses and three (3) group quarters addresses in Census Tract 0064.02, Census Block 3015. Your tribe’s address records indicate that there are actually 783 housing unit addresses and four (4) group quarters addresses in the census block.

To update the address count record:

- Record the 783 housing unit addresses in the **Tribal Count of Housing Unit Addresses** field.
- Record the four (4) group quarters addresses in the **Tribal Count of Group Quarters Addresses** field.

Figure 5.1: Adding Local Counts to the Address Count List

Entity ID Code	State Code	County Code	Census Tract Number	Census Block Number	Census Count of Housing Unit Addresses	Tribal Count of Housing Unit Addresses	Census Count of Group Quarters Addresses	Tribal Count of Group Quarters Addresses
TR0019TA0265	06	099	0064.02	3015	765	783	3	4

Make any necessary corrections to the Census Bureau maps.

Saving the File

Save the file frequently to avoid possible loss of work. In addition to saving the file often, you should back up the file each week. Do this in the event of hardware faults and/or software corruption. This process ensures that, at most, only a week’s worth of work is lost.

When you have finished updating the address count list file:

- Save to a new file only those records with an entry in the **Tribal Count of Housing Unit Addresses** field and/or the **Tribal Count of Group Quarters Addresses** field as a pipe-delimited, ASCII text file. *(If you need further instruction on saving a pipe-delimited, ASCII text file, please call the Help Desk toll free at 1-866-919-5822.)*
- Name the file containing your tribe’s address list TRxxxTAyyyy_LUAL.txt (TRxxxTAyyyy is your entity identification code) found on your LUCA materials.
- Make a backup copy of your edited file to keep for your records and to use during the Feedback phase of the program.

*** See Chapter 7 for preparing and returning your LUCA materials to the Census Bureau.**

Digital File Submission

Boundary and Annexation Survey

Introduction

The Census Bureau provides you with one set of paper maps or shapefiles as a reference for locating individual addresses and for updating and correcting your reservation's and/or off-reservation trust land's features and boundaries. If you requested to receive paper maps, you also receive a Map Sheet to Block Number Relationship List that identifies the map sheet(s) on which each census block is located. *See Figure 6.2, The Map Sheet to Block Number Relationship List.*

Reading a Census Bureau Paper Map

There are three types of paper map sheets:

1. Index Sheets
2. Parent Sheets
3. Inset Sheets

Index Sheets – for reference (if more than one map sheet)

- Cover the entire extent of your reservation and/or off-reservation trust land.
- Divided into numbered grids.
- Each numbered grid area corresponds to area covered by a parent sheet
- Used with reservations and/or off-reservation containing more than one parent sheet.

- Index sheets are for reference; please do not make updates to the index maps because the updates are difficult to incorporate into our database due to the smaller scale.

Parent Sheets – for map updates

- Detailed view of a section of your reservation and/or off-reservation trust land.
- Corresponds to a grid and grid number on the index sheet.
- Shows detail for features and geographic areas.
- Used for map updates.

Inset Sheets – for map updates to congested areas

- Shows the detail of congested areas on parent sheets.
- Corresponds to a notation on a parent sheet.
- Shows detail for features and geographic areas.
- Used to make updates for congested areas only.

The Census Bureau paper map shows some of the same information found on a typical road map, such as streets and roads, water features, and legal boundaries. However, the Census Bureau map displays this information using symbols unique to the Census Bureau.

The map displays the following information:

- Entity Boundaries.
- Entity name and FIPS Entity Code.
- Census tract boundaries.
- Census tract numbers.
- Census block boundaries.
- Census block numbers.
- Streets.
- Street names.
- Water features.

Refer to *Figure 6.1* on the next page for an example of a Census Bureau paper map.

Figure 6.1: Example of a Census Bureau Paper Map

Information contained in the map border:

- The key to adjacent areas, if your reservation and/or off-reservation trust land has multiple map sheets.
- Signature box for the Boundary and Annexation Survey (BAS) Official. (Use the signature box for the Boundary and Annexation (BAS) Official only if you are submitting boundary updates.)
- Entity identification information.
- Bar code.
- Scale.
- North arrow.
- MAF/TIGER Accuracy Improvement Project (MTAIP) credit for counties that have undergone the MTAIP process:

- The MTAIP project acquired geographic information system (GIS) files, aerial photography, and global positioning system (GPS) data from various sources nationwide to update the TIGER[®] database.
- One of the primary goals of the project was to develop a highly accurate geographic database of the United States. The Census Bureau focused on improving the accuracy of street feature coordinates to provide base information suitable for use with GPS-equipped hand held devices that would facilitate the gathering of accurate location and census information for all living quarters and workplaces.

The symbols on the map legend include:

- Boundaries
- Transportation
- Other Features
- Landmarks
- Footnotes and Notes

Refer to *Appendix B* for a detailed description of the map legend.

The Map Sheet to Block Number Relationship List

The Map Sheet to Block Number Relationship List is provided for use with paper maps. The list identifies the map sheet or sheets on which each census block is located and is sorted by census tract number and census block number in ascending order as shown in *Figure 6.2* on the next page.

49.01	3003	1						

Examples of Feature Updates

Adding a new street and associated address ranges¹² on the paper map

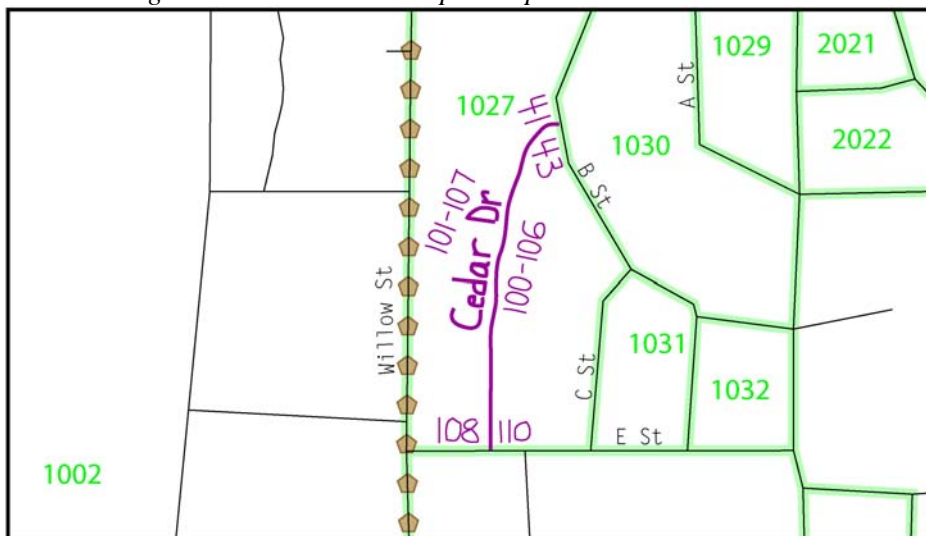

During your review, you may find addresses missing from the Census Bureau's address list that are on streets that are partially or entirely missing from the maps.

For example, Cedar Dr is a new street with newly constructed housing units in census tract **2623.00** and census block **1027**. The addresses are missing from the address list and the street is missing from the map.

The address ranges for this street are 100 through 106 on the east side of the street and 101 through 107 on the west side of the street.

The address breaks are between 41 and 43 on B St and 108 and 110 on E St.

Figure 6.3: Adding a New Street on the Paper Map

1. Using a purple pencil, draw the location of the new street on the map.
2. Print the street name.
3. Print the address ranges for each side of the new street.
4. Print the address breaks¹³ where Cedar Dr intersects B St (41-43) and E St (108-110).

¹²**Address ranges** are the lowest and highest address numbers used to identify structures along each side of a street segment. Usually one side of the street has even address numbers and the other side has odd address numbers.

¹³**Address breaks** are the city-style addresses on each side of a boundary or at an intersection of a street with another street or feature.

5. Be sure that your address list matches the map corrections.

Correcting a street name on the paper map:

The Census Bureau's address list and map below incorrectly shows C St instead of Cedar Dr, the correct street name. The map also does not list the alternate name for the street, which is County Road 9 (Co Rd 9).

Figure 6.4: Correcting a Street Name on the Paper Map

1. Using a purple pencil, cross out the incorrect name, C St, and print the correct name, Cedar Dr above it.
2. Use double hatch marks to show the extent of the name change. In this instance, the entire street needs to be corrected.
3. Print the alternate street name (Co Rd 9) in parentheses.
4. Be sure that your address list matches the map corrections.

Correcting the location of a street on the paper map:

The address list shows 101 through 106 N Jefferson St as located in Census Block 2014. According to your address list sources, N Jefferson St is located east of Jefferson St in Census Block 2015.

At this location, N Jefferson St includes an odd numbered address range¹⁴ from 101 through 105 on the west and an even numbered address range from 100 through 106 on the east.

N Jefferson St intersects Jefferson St between address numbers 502 and 504¹⁵.

Figure 6.5: Correcting the Location of a Street on the Paper Map

1. Using a purple pencil, cross out the incorrect location of N Jefferson St with a series of “Xs.”
2. Redraw N Jefferson St in its correct Census Block, 2015, and print the street name and address ranges along the moved street.
3. Draw an arrow to the correct location of N Jefferson St
4. Print the address breaks where N Jefferson St intersects Jefferson St between address numbers 502 and 504.
5. Be sure that your address list matches the map corrections.

¹⁴ **Address ranges** are the lowest and highest address numbers used to identify structures along each side of a street segment that has city-style addresses. Usually one side of the street has even address numbers and the other side has odd address numbers.

¹⁵ **Address breaks** are the city-style addresses on each side of a boundary or at an intersection of a street with another street or feature.

Deleting a street on the paper map

In this example, there are two streets and their associated addresses to delete.

1. All of the housing units along a portion of Hillsvie Rd between Census Blocks 1005, 1007, and 1008 have been demolished, and this section of the street no longer exists.
2. All of the houses on Dakota St between Census Blocks 1002, 1003, 1004, and 1005 have been demolished. The entire street no longer exists.

Figure 6.6: Deleting Streets on the Paper Map

Deleting a section of Hillsvie Rd on the map:

1. Use a purple pencil to “X” out the section of Hillsvie Rd that no longer exists.
2. Use double hatch marks to define the extent of the deleted segment when deleting only part of the street.

Deleting Dakota St on the map:

3. To delete Dakota St, “X” out the entire street and put a purple line through the name.
4. Be sure that your address list matches the map corrections.

Shapefiles

Shapefiles require the use of GIS software. The Census Bureau provides county-based shapefile layers in Environmental Systems Research Institute¹⁶ (ESRI) shapefile format. Participants that submit shapefiles with feature updates must follow Census Bureau requirements.

To geocode addresses to census blocks, a tabblock shapefile is included.

The shapefiles, created from the MAF/TIGER database, allow you to submit map feature updates electronically. All linear features in the MAF/TIGER database are contained in the edges shapefile. Use the edges shapefile to add, delete, or change linear feature attributes.

In addition to an edges shapefile, the Census Bureau provides shapefiles for legal boundaries that you may edit. Refer to the *Digital BAS Respondent Guide: Tribal Digital BAS Guide* included with your LUCA materials for boundary updates.

For more details on the contents of the shapefiles, view the readme.txt file that is included on the CD-ROM containing your shapefile

Submitting Shapefile Feature Information

In order to submit digital feature information, you must have a GIS capable of importing ESRI shapefiles, editing the features, and exporting layers back into ESRI shapefile format.

The Census Bureau's Shapefile Coordinate System and Projection Information

All shapefiles provided by the Census Bureau are in the following unprojected geographic-based coordinate system:

- GCS_NAD83
- Angular Unit: Degree (0.017453292519943299)
- Prime Meridian: Greenwich (0.000000000000000000)
- Datum: D_North_American_1983
- Spheroid: GRS_1980
- Semi-major Axis: 6378137.000000000000000000
- Semi-minor Axis: 6356752.314140356100000000

¹⁶ All shapefiles provided by the Census Bureau are in Environmental Systems Research Institute (ESRI) format. The use of brand names does not represent an endorsement of a company or its products by the U.S. Government. Due to the wide use of ESRI products by our partners in the GIS community, and ubiquitous use of the shapefile format as a medium for GIS data exchange, the Census Bureau provides data in shapefile format.

- Inverse Flattening: 298.257222101000020000

General File Setup Guidelines

Upon receipt of your shapefiles, follow the setup guidelines listed below before beginning actual updates:

- Open the CD and enclosed zip file to ensure it contains the shapefiles for your entity.
- Copy and decompress the shapefiles to a directory on your server or hard drive.
- Open the shapefile in a GIS.

Note: If you are using GIS software that does not contain a shapefile translator, please contact the Help Desk toll free at 1-866-919-5822 for further instructions.

Changing Our Coordinate System to Match Yours

Our files are in GCS_NAD83 format. Please feel free to project these files into your local coordinate system projection. Most GIS software packages contain projection wizards, or something similar, allowing the user to transform file coordinate systems and projections. For example, if your office uses ArcView to update files, please activate and utilize ArcView's 'Projection Utility Wizard' extension. If using ArcGIS, please use its "Projection Utilities" in ArcToolbox. MAF/TIGER extract shapefiles contain defined projection information in the *.PRJ file. Both ArcView and ArcGIS access the *.PRJ file for projection information; therefore, there is no need for you to define these parameters before changing the file coordinate system.

In addition, if your files are in a datum other than NAD83, you must geographically transform our files to match your datum. Most GIS software has tools for performing geographic transformations on files. If you transform the files to your local coordinate system, we request that you convert them back to the GCS_NAD83 format before submitting the file to the Census Bureau. If you encounter problems transforming our files, please contact the Help Desk toll free at 1-866-919-5822 for assistance.

Feature Information

If you have reviewed your features using our shapefiles and have determined that the Census Bureau needs to add, remove, or rename features in a given area, you may submit your modifications in a

separate layer. To move or correct the shape of a feature, first delete the feature then add the correction.

Use the appropriate update code located in the coding scheme as shown in *Figure 6.9* to identify the type of feature modification needed for submission.

If any issues arise with the shapefiles that you submit, your Census Bureau Regional Office will attempt to contact you to clarify the issue. If clarification is not made prior to our project deadline, the updates may not be incorporated into MAF/TIGER. Your updates are considered temporary until their existence is confirmed during our Address Canvassing Operation.

Updating the Feature Shapefile

Use the edges layer to provide all feature updates to the Census Bureau’s shapefile.

Edges Layer Data Dictionary

The data dictionary defines the attribute information for each feature contained in the edges layer. Refer to *Figure 6.7* for an example of the edges layer data dictionary.

Figure 6.7: Edges Layer Data Dictionary

Field	Length	Type	Description
TLID	10	Integer	TIGER/Line ID
MTFCC	5	String	Feature MTFCC
FIDELITY	1	Integer	Shape Fidelity Flag
FULLNAME	120	String	Feature name
CHNG_TYPE	4	String	Type of digital linear update

- **TLID** is the TIGER/Line® ID
- The MAF/TIGER Feature Class Code or **MTFCC** is used to identify the most noticeable characteristic of a feature.
 - The **MTFCC** is a 5-character code; the first character is a letter describing the feature class. For example, streets and roads are identified as S1400.
 - The Census Feature Class Codes or CFCC were recently changed to the **MTFCC**. A crosswalk is on the following page as well as in the readme.txt file on your CD-ROM.

- If the **FIDELITY** flag contains a value of “1,” the Census Bureau was unable to maintain the boundary’s shape during the MAF/TIGER Accuracy Improvement Process (MTAIP).
 - The MTAIP project acquired geographic information system (GIS) files, aerial photography, and GPS data from various sources nationwide to update the TIGER[®] database.
 - One of the primary goals of the project was to develop a highly accurate geographic database of the United States. The Census Bureau focused on improving the accuracy of street feature coordinates to provide base information suitable for use with GPS-equipped hand held devices that would facilitate the gathering of accurate location and census information for all living quarters and workplaces.
 - To aid the Census Bureau in developing a highly accurate geographic database, please review all line segments (not just roads) in the Census Bureau’s edges layer for lines with a fidelity flag value of “1.” Make necessary boundary corrections to the affected entity if the boundary has been coordinately shifted.

- **FULLNAME** is the feature name.

- **CHNG_TYPE** is the type of digital linear update.

Figure 6.8: Census Feature Classification MTFCC to CFCC Crosswalk

Census Feature Classification MTFCC to CFCC Crosswalk**Road Features**

MTFCC	FEATURE NAME	CFCC
S1100	Interstate Highway or Primary Road with limited access	A11, A12, A13, A14, A15, A16, A17, A18, A19
S1200	Primary Road without limited access, US Highway, State Highway, or County Highway, Secondary and connecting roads	A21, A22, A23, A24, A25, A26, A27, A28, A29, A31, A32, A33, A34, A35, A36, A37, A38, A39
S1400	Local Neighborhood Road, Rural Road, City Street	A41, A42, A43, A44, A45, A46, A47, A48, A49, A61, A62

L4165	Ferry Crossing	A65, B40

Change Type Codes for Feature Corrections

Each updated line to the edges layer must contain one of the change type codes (Add Line, Change Attribute, Delete Line) listed in the coding scheme in *Figure 6.9*. Record the change type code in the **CHNG_TYPE** field in the attribute table for each line.

Figure 6.9: Change Type Codes for Feature Corrections

Code	Description
AL	Add Line
CA	Change Attribute
DL	Delete Line

Each feature update must have a change type code in the change type field for the line.

- There are three change type codes:
 1. Add Lines
 - Code – **AL**
 - Used to add a new feature (Road, Railroad, Hydrography, etc.)
 2. Change Attribute
 - Change Name
 - Code – **CA**
 - Used to change the name of a feature
 - Provide the feature's new name in the **FULLNAME** field
 - Change Feature Class
 - Code – **CA**
 - Used to change the feature class code (e.g., a local road mistakenly coded as a highway).
 3. Delete Line
 - Code – **DL**
 - Used to delete a feature

The following are examples of change type codes for feature corrections.

Example

1. Adding a Feature to the Edges Layer

Cedar Dr is a new street that needs to be added to the Census Bureau's shapefile.

- Add or copy the missing street or feature into the edges layer.

In the attribute table:

1. Leave the **TLID** and **FIDELITY** fields blank.
2. Enter the appropriate **MTFCC**. In this example, S1400.
3. Enter the feature name in the **FULLNAME** field (if any), in this case Cedar Dr.
4. Enter **AL** in the **CHNG_TYPE** field.

2. Correcting a Feature Name

Cedar Dr is incorrectly identified as C Street.

In the attribute table:

1. Edit the **FULLNAME** field, in this case correcting it from C Street to Cedar Dr.
2. Enter **CA** in the **CHNG_TYPE** field.

3. Procedure for changing the MTFCC of an existing feature

A local road was mistakenly coded as a highway.

In the attribute table:

1. Edit the **MTFCC** from S1200 to S1400.
2. Enter **CA** in the **CHNG_TYPE** field (i.e., a local road was mistakenly coded as a highway).

4. Deleting a feature

A section of Hillsvie Rd no longer exists. In addition, the entire length of Dakota Street has been replaced by a city park.

In the attribute table:

1. Enter **DL** in the **CHNG_TYPE** field for the segment of Hillsview Rd that no longer exists.
2. Enter **DL** in the **CHNG_TYPE** field for all of the segments for Dakota Street which no longer exist.

5. Moving a street

The Census Bureau shapefile incorrectly shows the location of N Jefferson St.

Add N Jefferson St in the correct location in the edges layer.

In the attribute table:

1. Enter **DL** in the **CHNG_TYPE** field for the incorrect segment(s) of N Jefferson St to be deleted.
2. For the new street segment(s), leave the **TLID** and **FIDELITY** fields blank.
3. Enter the appropriate **MTFCC**.
4. Enter N Jefferson St Street in the **FULLNAME** field.
5. Enter **AL** in the **CHNG_TYPE** field.

To move or correct the shape of a feature, first delete the incorrectly placed or aligned feature and then add the correction.

Figure 6.10 displays the updated attribute table, based on the previous examples.

Figure 6.10: Example Attribute Table Updates

TLID	MTFCC	FIDELITY	FULLNAME	CHNG_TYPE
	S1400		Cedar Dr	AL
	S1400		N Jefferson St	AL
9999999995	S1400	0	Cedar Dr	CA
9999999996	S1400	0	Hillsview Rd	DL
9999999997	S1400	0	Dakota Street	DL
9999999998	S1400	0	Dakota Street	DL
9999999999	S1400	0	N Jefferson St	DL

Attribute table update example:

- Cedar Dr added
- C Street corrected to Cedar Dr
- Segment of Hillsview Rd deleted
- Dakota Street deleted
- N Jefferson St moved

Copy all features with values in the **CHNG_TYPE** field into a new feature update shapefile. The feature update shapefile will resemble what is shown in *Figure 6.11*.

Figure 6.11: Digital Road Correction Example

Metadata

Metadata Requirements

Metadata that describe the data content, coordinate system/projection, author, source, and other characteristics of GIS files are critical for Census Bureau staff to efficiently and accurately process files. The Census Bureau requires that a metadata text file accompany every GIS file and layer submitted.

The Federal Geographic Data Committee's (FGDC) Content Standard for Digital Spatial Metadata provides a national standard that enables the data-sharing public to easily locate critical information about a file and ensure that no critical information is omitted inadvertently when creating metadata. For this reason, the Census Bureau requests that metadata be submitted using this standard. For information about the FGDC and its geospatial metadata standards, please visit <www.fgdc.gov/metadata>.

The Census Bureau requires that the following sections of the FGDC metadata form be completed:

- Citation (information about the originator, publication date, title edition, and other publications or information).
- Description (section that contains an abstract describing your data set).
- Time period of content (section that describes the vintage of the data).
- Spatial domain (information about bounding coordinates).
- Point of contact (general contact information).
- Data quality information (information about attribute accuracy).
- Spatial reference information (section on coordinate system/projection of the data set).
- Entity and attribute information (section that describes the contents of your table).

To help you fulfill the requirement of filling out and submitting metadata, the Census Bureau suggests visiting the United States Geological Survey (USGS) Web site at <www.usgs.gov>. This site contains useful information about FGDC compliant metadata, from which one can read about metadata frequently asked questions, view FGDC metadata examples, and connect to other FGDC related Web pages. The USGS's metadata URL is <www.fgdc.gov/metadata>. Moreover, if you are using Arc/Info, the following link points to a useful Arc Macro Language (AML) tool that, when executed, completes most of the required sections

of the metadata form automatically
<www.marinemetadata.org/tools/refs/FGDCMeta>. (This AML is a product of the Illinois State Geological Survey.)

Note: ESRI's ArcCatalog also has an embedded program that uses the FGDC standard in its creation of geospatial metadata.

If you have questions regarding the metadata requirements, please contact the Census Bureau at the Help Desk toll free at 1-866-919-5822.

Digital File Submission

Use the following as a guide to ensure that you have included all the required layers.

- Name the feature update layer:

LUCA_<entity ID>_LN_changes.shp

The feature update layer must include:

- A value in its "CHNG_TYPE" field that indicates the type of change.
- Only feature updates (do not include unmodified features).
- Include the appropriate metadata.

Boundary and Annexation Survey (BAS)

The Census Bureau conducts the Boundary and Annexation Survey (BAS) each year to determine the inventory of correct names, legal descriptions, and legal boundaries of federally recognized American Indian reservations and/or off-reservation trust lands, counties and equivalent entities, minor civil divisions, and incorporated places. Title 13, U.S.C. authorizes this voluntary survey. Specifically, the Census Bureau requests up-to-date boundary information for Tribal governments and information on the legal actions associated with the changed boundaries. The Census Bureau enters all boundary and area information obtained through the BAS into the TIGER[®] database so that all subsequent map and Census address list products reflect these changes.

During your LUCA review, you may find that the boundary for your reservation and/or off-reservation trust land does not depict the correct current location. You may use your LUCA maps to provide updates to your legal boundaries. If you registered to participate in the LUCA program before

October 31, 2007, you received your 2008 BAS materials with your LUCA program materials.

The BAS materials include the *Boundary and Annexation Survey Tribal Paper Respondent Guide* for paper maps and a Boundary and Annexation Survey form.

If you selected to receive shapefiles, a layer for legal boundaries that you may edit is included. Refer to the *Boundary and Annexation Survey Respondent Guide: Tribal Digital BAS* included with the CD-ROM containing your shapefiles for instructions on making your boundary edit.

CHAPTER 7 SUBMITTING YOUR LUCA PROGRAM UPDATES

Submitting LUCA Program Updates
Shipping Your LUCA Materials

Submitting LUCA Program Updates

After completing your review and update of the LUCA materials, return the materials with updates to the Census Bureau's Regional Office responsible for your reservation and/or off-reservation trust land. Include the inventory form, *Appendix F*, with your returned materials. Please follow the procedures for shipping Census Bureau Title 13 materials as outlined in this chapter.

Preparing the Computer-Readable Address List And Address Count List Files For Submission

- Return **only those records with updates** on a CD-ROM or DVD as explained in Chapters 4 and 5 “Saving the File.”
- Make a copy of your edited files to keep for your records and to use during the Feedback phase of the program.
 - *All address list copies are Title 13 address information. Keep all copies in a secure location.*
- ZIP and password protect the files.
 - If you do not have ZIP software, Freebyte ZIP software is provided on your CD-ROM.
 - Use the case-sensitive password provided to you by the Census Bureau.
- Burn all of the files to a CD-ROM or DVD.

Note: *If you are submitting shapefiles, you may burn all of your files to one (1) CD-ROM or DVD. See the section, Preparing the Shapefiles for Submission.*
- Send the CD-ROM or DVD with updates to your Census Bureau Regional Office as instructed in the section, *Shipping Your LUCA Materials*.
- You **cannot** submit files via e-mail or post the files to an FTP site.

Preparing the Shapefiles for Submission

Note: If you are using ArcGIS, when you copy files to be burned to a CD-ROM, be sure to use ArcCatalog. ArcCatalog will capture all required files such as .dbf, .shp, .shx, etc.

- Compress all updated materials – Shapefiles and Metadata (feature and boundary) – into one ZIP formatted file called:

LUCA_2010_<entity ID>_Return.ZIP

Note: *If you have boundary updates, ZIP the file and burn to a CD-ROM **after** making your boundary updates.*

- Save a backup copy of your updated digital file for your records and to use during the Feedback phase of the program.
- Burn the file to a CD-ROM or DVD.
- Send the CD-ROM or DVD with updates to your Census Bureau Regional Office as instructed in the section, *Shipping Your LUCA Materials*.
- You **cannot** submit files via e-mail or post the files to an FTP site.

Note: *You may burn all of your files (shapefiles, Address List, and Address Count List) to one (1) CD-ROM or DVD.*

Sorting the Census Bureau’s Paper Maps for Submission

- Separate the map sheets with updates from those without updates.
- Make a copy of all map sheets containing updates to keep for your records to use during the Feedback phase of the program.
- Organize the updated map sheets by map sheet number.
- Fold the maps if there are five (5) or fewer map sheets.
- If there are more than five (5) map sheets, roll the maps and mail them in a mailing tube or box.

Return only those map sheets containing updates.

Shipping Your LUCA Materials

- Double wrap all address materials.
- Label both sides of the inner envelope or wrapping with the disclosure notice as shown below and in *Appendix G*:

“This Package Contains U.S. Census Bureau Address Information: DISCLOSURE PROHIBITED BY Title 13 U.S.C.”

- Do not label the outer envelope with the disclosure notice.
- Include the Inventory Form, *Appendix F*.

- Address all envelopes, mailing boxes, mailing tubes, etc. to:

ATTN: GEOGRAPHY

U.S. Census Bureau

Address for your Census Bureau Regional Office

You can find a list of the Census Bureau's Regional Office addresses on the back cover.

- Use the enclosed FedEx label provided to you, if FedEx service is available in your area.
- Use shipping contractors that provide tracking services, such as U.S. Postal Service (USPS) certified or registered mail, FedEx, United Parcel Service (UPS), or similar service.

Chapter 8

Returning or Destroying Census Bureau Title 13, U.S.C. Materials

Program Conclusion

Returning Census Bureau Title 13, U.S.C. Materials

Destroying Census Bureau Title 13, U.S.C. Materials

Program Conclusion

At the **conclusion of the appeals process**, you must return to the Census Bureau or destroy all Title 13, U.S.C. address lists and all copies. If you choose to destroy Title 13, U.S.C. materials, you must follow the Census Bureau's specific guidelines for destroying Title 13 materials as described below or in the Confidentiality and Security Guidelines.

The designated tribal liaison is required to verify the return or destruction of any remaining Title 13 materials, both paper and computer-readable (i.e. paper copies, backup files, etc.) by **signing and returning** to the Census Bureau the Return or Destruction of Title 13, U.S.C. Materials form found in *Appendix H*. If you return your Title 13 materials to the Census Bureau, **this form must be included**. All LUCA Program reviewers and anyone with access to Title 13 materials (includes all persons who signed the Confidentiality Agreement Form) are required to sign and date this form once the appeals process has concluded. Should any tribal liaison, reviewer, or anyone with access to Title 13 materials leave before the completion of the LUCA Program, they are required to sign out of the program by signing and dating this form. If any tribal liaison or reviewer leaves and fails to sign and date this form, the current tribal liaison can sign out on their behalf.

Returning Census Bureau Title 13, U.S.C. Materials

- Double wrap all Title 13 materials. This includes your original CD-ROM and all paper copies and backup files of the Census Bureau's address list and Feedback maps containing structure points.
- Label both sides of the inner envelope or wrapping with the disclosure notice as shown below and in *Appendix G*:

***“This Package Contains U.S. Census Bureau Address Information:
DISCLOSURE PROHIBITED BY Title 13 U.S.C.”***

- Do not label the outer envelope with the disclosure notice.
- Address all envelopes, mailing boxes, mailing tubes, etc. to:

ATTN: GEOGRAPHY

U.S. Census Bureau

Address for your Census Bureau Regional Office

You can find a list of the Census Bureau's Regional Office addresses on the back cover.

- Use the enclosed FedEx label provided to you, if FedEx service is available in your area.
- Use shipping contractors that provide tracking services, such as U.S. Postal Service (USPS) certified or registered mail, FedEx, United Parcel Service (UPS), or similar service.

Destroying Census Bureau Title 13, U.S.C. Materials

- Only those individuals who signed the Confidentiality Agreement Form are permitted to destroy the materials.
- Never deposit Census Bureau confidential materials in a trash or recycle container before destruction.
- Store the materials in a secure area in a container labeled "document destruction container" until they are destroyed.
- The destruction process must prevent recognition or reconstruction of the paper or computer-readable information. Use one of the following methods to destroy census confidential materials:
 - Shredding.
 - Chemical decomposition.
 - Pulverizing (such as, hammer mills, choppers, etc.).
 - Burning (only in a facility approved by the Environmental Protection Agency).
 - Clear magnetic media (tapes, disks, hard drives) containing Census Bureau address information before reuse. To clear, overwrite all Title 13 data a minimum of three times using a commercial disk utility program or degauss using a commercial degausser.
 - Clear diskettes by running a magnetic strip of sufficient length to reach all areas of the disk over and under each surface a minimum of three times. If the information cannot be destroyed as suggested, the disk must be damaged in an obvious manner to prevent use in any disk drive unit and discarded.
 - Destroy CD-ROMs and DVDs using a commercial grade shredder, suitable for rendering them unuseable; or cut them up with scissors in an obvious manner to prevent use in a drive unit.

Note: Hand tearing or burying information in a landfill are unacceptable methods of disposal.

If you have questions regarding the destruction of Title 13 materials, contact your Census Bureau Regional Office.

APPENDICES

Appendix A Confidentiality and Security Guidelines

The law requires the U.S. Census Bureau to maintain the confidentiality for all of the information that it collects. The Census Bureau takes its responsibility to protect the confidentiality of the information it collects very seriously. Respondents place their trust in the Census Bureau each time they complete a survey or an interview. This trust in confidentiality is critical to the success of the Census Bureau's mission to collect and report the most accurate data possible. To uphold the law, the Census Bureau requires that all individuals who work with the Census Bureau's confidential materials read, understand, and agree to abide by the confidentiality and security guidelines outlined below.

Why Address Information Is Protected

Title 13, United States Code (U.S.C.), provides for the confidential treatment of census-related information. Chapter 1, Section 9 of the code states:

“Neither the Secretary, nor any other officer or employee of the Department of Commerce or bureau or agency thereof, or local government census liaison, may, except as provided in section 8 or 16 or chapter 10 of this title...

- 1) *use the information furnished under the provisions of this title for any purpose other than the statistical purposes for which it is supplied; or*
- 2) *make any publication whereby the data furnished by any particular establishment or individual under this title can be identified; or*
- 3) *permit anyone other than the sworn officers and employees of the Department or bureau or agency*

thereof to examine the individual reports.”

Section 214 of the Code and the Uniform Sentencing Act of 1984 set the penalty for the wrongful disclosure or release of information protected by Title 13 at a fine of not more than \$250,000 or imprisonment for not more than 5 years, or both.

To implement this law, all Census Bureau employees (both temporary and permanent) take an oath to maintain the confidentiality of the census information they encounter in their work. Census information includes:

- Everything on a completed or partially completed questionnaire or obtained in a personal or telephone interview.
- Individual addresses maintained by the Census Bureau that Local Update of Census Addresses (LUCA) Program liaisons review.
- Maps that identify the location of individual housing units and/or group quarters (“structure points”).

Title 13 of the U.S.C. does not protect generalized address information, such as the address range data available in the Census Bureau's digital shapefile products.

In 1994, the U.S. Congress amended Chapter 1 of Title 13 to allow local government designated census liaisons to review the Census Bureau's address list for their area. This amendment recognizes the important role that local knowledge and participation can play in building and updating an accurate, comprehensive census address list. In

amending this chapter, the Congress reaffirmed the confidential nature of address information.

The Confidentiality Agreement

Each participating government must designate a primary liaison. The primary liaison, all reviewers, and anyone with access to Title 13, U.S.C. materials must understand and sign the Confidentiality Agreement. The Census Bureau considers all individuals who have access to the Census Bureau's address information and maps showing the location of housing units and group quarters, liaisons. Therefore, all Option 1 and Option 2 2010 Decennial Census LUCA Program liaisons, reviewers, and anyone with access to Title 13 materials must sign the Confidentiality Agreement.

Signatures on this form constitute an agreement by each individual to abide by the security guidelines outlined below. While access to Title 13 protected information is temporary, the commitment to keep the information confidential is permanent.

- **The Census Bureau will not deliver the address list materials to Option 1 and Option 2 participants until we have received a completed and signed Confidentiality Agreement and Self-Assessment Form.**
- **Although you may have prior confidentiality agreements on file at the Census Bureau, these will not fulfill the requirements of the 2010 Decennial Census LUCA Program.**

Security Guidelines

The Census Bureau recognizes the fact that the implementation of these guidelines may vary slightly from one

participant to another. Regardless, the result must be the same for each participant – nondisclosure of information protected by Title 13, U.S.C.

The primary liaison accepts the responsibility for protecting and safeguarding the LUCA program materials covered by Title 13, U.S.C. This includes any list that shows individual Census Bureau addresses and any Census Bureau map or digital file that shows individual housing units and/or group quarters location ("structure points"). The primary liaison must restrict access to the Census Bureau's address information to those individuals who have signed the Confidentiality Agreement. The liaison, reviewers, and anyone with access to Title 13 materials must sign the Confidentiality Agreement.

As you read the Census Bureau's security requirements, keep in mind the important role security plays in the overall responsibilities of each LUCA program liaison, reviewers, and anyone with access to Title 13 materials. The Census Bureau must have your full cooperation and commitment to following these guidelines. Together, we will maintain the confidential information entrusted to the Census Bureau by the Congress and the American public.

Protecting Census Bureau Address Information

The Census Bureau will conduct training workshops covering all aspects of the LUCA program. In addition, the workshops will provide the participating governments with an opportunity to review the security guidelines and safeguards to protect against illegal use of Census Bureau address information. Census Bureau staff conducting the workshops will provide information to

help you decide who in your organization needs to have access to the Census Bureau's Address List and will review the civil and criminal penalties for improper or illegal use of the data.

Onsite Visits

To ensure that participating entities or organizations are maintaining adequate security safeguards, the Census Bureau may make on-site visits to review your government or organization's security procedures. The Census Bureau will strive not to disrupt your office operations. A typical visit would include a review of:

- Storage and handling of Census Bureau address information.
- Employee access to Census Bureau address information.
- The physical safeguard of the computers, rooms, and buildings where the Census Bureau address information is stored.
- Instructions to employees about security.
- Data processing operations (including use of passwords).
- Employee awareness of their responsibilities to protect the confidentiality of Census Bureau addresses.

Protecting Paper Copies of Census Bureau Address Information and Maps

- Keep all Census Bureau address information in a locked room during non-work hours. If possible, store the Census address materials and maps showing structure points in locked desks or cabinets.

- During work hours, do not leave a room unattended where Census Bureau address information is stored. Lock the room whenever you leave.
- Do not leave Census Bureau address information unattended at your desk. Return any Title 13 data to secure storage when you are not using it.
- Only make copies of the information necessary to complete your task. Do not leave the copying machine unattended while making copies. All copied material containing Title 13 information must bear the statement:

“This document contains information, the release of which is prohibited by Title 13, U.S.C., and is for U.S. Census Bureau official use only. Wrongful disclosure or release of information can be punished by fine or imprisonment (Public Law 99-474).”

- To FAX a document containing Census Bureau address information to a Census Bureau location, make sure the document is properly labeled with the disclosure statement: **“DISCLOSURE PROHIBITED BY Title 13, U.S.C.”**, verify the FAX number before sending, and arrange for a Census Bureau employee to be at the FAX machine to receive it and acknowledge receipt.
- Do not disclose precise or even anecdotal information about Census Bureau addresses or locations to anyone who has not signed the Confidentiality Agreement Form or is not a Census Bureau employee.

Protecting Computer-Readable Census Bureau Address Information and Maps

Operating systems, programs, applications, and data related to the review of Census Bureau addresses must be accessible only to LUCA program liaisons and reviewers. The automated data processing (ADP) system should restrict the read, write, delete, and execute functions applicable to the Census Bureau's addresses.

The ADP system must use log-on routines that require a user-ID and password that conform to the following guidelines:

- Assign a unique user-ID and password for liaisons, reviewers, and anyone with access to Title 13 materials.
- Passwords must consist of at least 8, nonblank characters consisting of at least one alphabet letter and either one number or one special character (\$, *, &). No more than six consecutive characters (AAAAAA) may appear in the password, and then only once.
- Reject passwords that are the same as the user-ID or that have been used within the last 6 months.
- Encrypt passwords.
- Disable passwords after three bad attempts.
- Do not display passwords on terminals or printers.
- Change passwords every 90 days (more frequent change is optional) or immediately, if compromised.
- On new accounts, the user must change the assigned password to a

unique password the first time they log on.

The ADP system must display a warning log-on feature. Computer screens must display a warning that states:

****WARNING*WARNING*WARNING**
YOU HAVE ACCESSED A COMPUTER
SYSTEM CONTAINING UNITED STATES
GOVERNMENT INFORMATION. USE OF
THIS COMPUTER WITHOUT
AUTHORIZATION OR FOR PURPOSES
FOR WHICH AUTHORIZATION HAS NOT
BEEN EXTENDED IS A VIOLATION OF
FEDERAL LAW AND CAN BE PUNISHED
BY FINE OR IMPRISONMENT (Public Law
99-474). ALL USE MAY BE
INTERCEPTED, MONITORED,
RECORDED, COPIED, AUDITED,
INSPECTED, AND DISCLOSED TO
AUTHORIZED LAW ENFORCEMENT
OFFICIALS. REPORT SUSPECTED
VIOLATIONS TO YOUR AGENCY
SECURITY OFFICER. USE OF THIS
SYSTEM INDICATES YOU CONSENT TO
THIS WARNING. LOG OFF
IMMEDIATELY IF YOU DO NOT AGREE
TO THE CONDITIONS OF THIS
WARNING.
WARNING*WARNING*WARNING**

If Census Bureau address information is placed on a shared computer system, construct electronic security profiles to allow only LUCA program liaisons, reviewers, and anyone with access to the Census Bureau's address information. Test your security to ensure that only LUCA liaisons and reviewers are permitted access to the Census Bureau's address information.

ZIP and password protect Title 13 Census Bureau address information.

Lock all rooms containing computers with Title 13 Census Bureau address information and all associated media during non-work hours.

Do not leave computers with Census Bureau address information unattended during work hours. Log-off the

computer/system or lock the room whenever you leave.

Label any computer diskettes, CD-ROMs, DVDs, tapes, cartridges or other computer storage media containing Census Bureau address information with the following:

“This document contains information, the release of which is prohibited by Title 13, U.S.C., and is for U.S. Census Bureau official use only. Wrongful disclosure or release of information can be punished by fine or imprisonment (Public Law 99-474).”

If backup is necessary, do not send the tapes, cartridges, or disks off-site. Store them in a secured area. **Do not mix, store, or back-up LUCA data with other data.**

Clear magnetic media (tapes, disks, hard drives) containing Census Bureau address information before reuse. To clear magnetic media, overwrite all Title 13 data three times at a minimum using a commercial disk utility program or degauss using a commercial degausser.

Program any software you develop for displaying the Census Bureau addresses to label each affected page of a printout containing Census Bureau address information with the following:

“This document contains information, the release of which is prohibited by Title 13, U.S.C., and is for U.S. Census Bureau official use only. Wrongful disclosure or release of information can be punished by fine or imprisonment (Public Law 99-474).”

Returning Census Bureau Title 13 Materials

Once you have completed your initial review and update of the LUCA materials, return only those materials

with updates to the Census Bureau’s Regional Office responsible for your jurisdiction. Make a copy of all updated pages to keep for your records. Retain all non-annotated Title 13 materials until you receive your feedback materials. Keep all retained address lists and copies in a secure location.

Use the following guidelines to ship the updated materials:

- Ship all Census Bureau confidential material in two opaque sealed envelopes that are durable enough to prevent someone from viewing or tampering with the enclosed materials.
- Label both sides of the inner envelope or wrapping with the disclosure notice:

“DISCLOSURE PROHIBITED BY Title 13, U.S.C.”

- **DO NOT** label the outer envelope with the **“DISCLOSURE PROHIBITED BY Title 13, U.S.C.”** notice.
- Address the outer envelope to:

**ATTN: GEOGRAPHY
U.S. Census Bureau
Address for your Census Bureau
Regional Office**

- Use shipping contractors that provide tracking services, such as U.S. Postal Service certified or registered mail, FedEx, United Parcel Service, or similar service.

Return or Destruction of Census Bureau Confidential Materials

After the appeals process has concluded, **all** Title 13, U.S.C., Census Bureau address lists and maps containing structure points **must be returned or**

destroyed according to the Census Bureau’s specific guidelines for returning or destroying confidential material.

The liaison is required to verify the return or destruction of any remaining Title 13 materials, both paper and computer-readable including all paper copies, backup files, etc. The liaison must sign and return to the Census Bureau the “Return or Destruction of Title 13, U.S.C. Materials” form. In addition, all LUCA program reviewers and anyone with access to Title 13 materials who signed the Confidentiality Agreement are required to sign this form once their participation in the LUCA program has ended. Should any liaison, reviewer, or anyone leave before the end of the LUCA program, they are required to “sign-out” of the program by signing and dating this form.

Only those individuals who signed the Confidentiality Agreement are permitted to destroy Title 13, U.S.C. materials.

- Never deposit Census Bureau confidential materials in a trash or recycle container before destruction.
- Store the materials in a secure area in a container labeled “document destruction container” until they are destroyed.
- The destruction process must prevent recognition or reconstruction of the paper or computer-readable information. Use one of the following methods to destroy census confidential materials:

- Shredding
 - Chemical decomposition
 - Pulverizing (such as, hammer mills, choppers, etc.)
 - Burning (only in a facility approved by the Environmental Protection Agency)
 - Clear magnetic media (tapes, disks, hard drives) containing Census Bureau address information before reuse. To clear, overwrite all Title 13 data a minimum of three times, using a commercial disk utility program or degauss using a commercial degausser.
 - Clear diskettes by running a magnetic strip of sufficient length to reach all areas of the disk over and under each surface a minimum of three times. If the information cannot be destroyed as suggested, damage the disk in an obvious manner to prevent use in any disk drive unit and discard.
- Note:** Hand tearing or burying information in a landfill are unacceptable methods of disposal before destruction.
- Destroy CD-ROMs and DVDs using a commercial grade shredder, suitable for rendering them un-usable, or cut them up with scissors in an obvious manner to prevent use in a drive unit.

Appendix B The Map Legend

2010 LOCAL UPDATE OF CENSUS ADDRESSES MAP LEGEND			
SYMBOL DESCRIPTION	SYMBOL	NAME STYLE	
International	☆☆☆☆☆☆	CANADA

Nonvisible Boundary or Feature Not Elsewhere Classified			
Perennial Stream or Shoreline			
Intermittent Stream or Shoreline			

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

¹ Boundaries reshaped during coordinate enhancement are highlighted on the map.
² A "*" following a block number indicates that the block number is repeated elsewhere in the block.
³ Insert footnote about address break here.

The map legend describes the various symbols and colors used on the paper maps. The legend is divided into three columns:

1. The Symbol Description column includes the type of features, boundaries, and geography shown on the map.
2. The Symbol column shows the symbols representing the feature in the symbol description.
3. The Name Style column shows an example of the name of a particular feature such as a road, waterway, or geographic area displayed on the map.

Boundaries

The first group of symbols in the legend refers to different boundary types or geographic area shown on the map. Each type of boundary has a distinct color or symbol.

Transportation

The second group of symbols represents various types of transportation features. Thicker lines identify major roadways such as interstates and U.S. highways while thinner lines represent secondary roads and city streets. Also identified are cul-de-sacs and circles. Jeep trails, walkways, stairways, and ferries, represented by distinctive dashed lines, are included in this section.

Interstate	
U.S. Highway	
State Highway	
Other Road	
Cul-de-sac	
Circle	
Address Range Break ³	
Jeep Trail, Walkway, Stairway, or Ferry	
Railroad	

Pipeline or Power Line	
Ridge, Fence, or Other Physical Feature	
Property Line	
Nonvisible Boundary or Feature Not Elsewhere Classified	
Perennial Stream or Shoreline	
Intermittent Stream or Shoreline	
Geographic Offset and Corridor	

Other Features

The third group of symbols represents other feature types such as pipelines and streams and nonvisible boundaries. Streams and shorelines are blue and geographic offset and corridors are speckled red.

Landmarks

The last group of symbols represents various landmarks on the map such as rivers and lakes, glaciers, airports, cemeteries, golf courses, jails, military installations, parks, and mountain peaks. The area outside of the subject area is speckled gray.

Large River or Lake	
Glacier	
Airport	
Cemetery	
Golf Course	
Jail	
Military Installation	
Park	
Mountain Peak	
Inset Area	
Outside Subject Area	

Footnotes and Notes

The footnote and notes section of the legend provide additional information and details on geographic relationships, boundaries, and symbols

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

¹ Boundaries reshaped during coordinate enhancement are highlighted on the map.

² A "*" following a block number indicates that the block number is repeated elsewhere in the block.

³ Insert footnote about address break here.

CONFIDENTIALITY AGREEMENT LOCAL UPDATE OF CENSUS ADDRESSES (LUCA) PROGRAM 2010 Decennial Census		
PLEASE PRINT		
1. Government name 		
2. Name of LUCA Liaison's Office or Department (<i>Assessor's Office, Planning Department, etc.</i>) 		
3. Address (<i>House number and street name, RR, HC, or PO box number</i>) 		
4. City, State, ZIP Code 		
Responsibilities for Participating in the 2010 Decennial Census LUCA Program <p>All 2010 Decennial Census LUCA Program liaisons, reviewers, and anyone with access to Title 13 materials must agree to keep confidential the U.S. Census Bureau address information (including map structure points provided for feedback) they review or to which they have access. They may use this information solely for suggesting improvements to the Census Bureau's address list and maps. All individuals who will be reviewing Census Bureau addresses or have access to Title 13 materials must sign below to indicate they have read and understand the Census Bureau's results regarding restrictions related to confidential information. By signing this agreement, your government agrees to return or destroy all Title 13, Census Bureau confidential materials to the Census Bureau after the LUCA Program appeals process is complete. In addition, those who sign the agreement indicate that they understand the penalty for disclosing information about addresses or individuals obtained by the Census Bureau, including maps that contain structure points showing the location of housing units or group quarters is a fine of not more than \$250,000 or imprisonment for not more than 5 years, or both. Although access to the data is temporary, this commitment is permanent. You must be at least 18 years of age to sign this agreement.</p>

All LUCA Program liaisons, reviewers, and anyone with access to Title 13 materials are required to sign and date this form at the conclusion of the appeals process. Should any liaison, reviewer, or anyone with access to Title 13 materials leave before the completion of the LUCA Program, they are required to sign-out of the program by signing and dating this form. If any liaison, reviewer, or anyone with access to Title 13 materials fails to sign and date this form, the current liaison can sign-out on their behalf.

U S C E N S U S B U R E A U

GLOSSARY

Address breaks – Address breaks are the city-style addresses on each side of a boundary or at an intersection of a street with another street or another feature.

Address count list – Identifies the number of housing unit addresses and group quarters addresses on the Census Bureau’s address list for each census block within a reservation.

Address range – The lowest and highest address numbers used to identify structures along each side of a street segment that has city-style addresses. Usually one side of the street has even address numbers and the other side has odd address numbers.

American Indian area – A Census Bureau term that refers to any or all of the following entities: American Indian reservation, American Indian off-reservation trust land, Oklahoma tribal statistical area, joint use area, American Indian tribal subdivision, tribal designated statistical area, and state designated American Indian statistical area.

American Indian off-reservation trust land – The United States holds title for specific areas in trust for the benefit of federally recognized American Indian tribes (tribal trust land) or for individual American Indians (individual trust land). Although trust land may be located on or off a reservation, the Census Bureau recognizes and tabulates data only for off-reservation trust land. Census data always associate off-reservation trust land with a specific federally recognized reservation or tribal government.

American Indian reservation – A federal American Indian reservation is an area that has been set aside by the United States for the use of one or more federally recognized American Indian tribes. It covers territory over which a tribe(s) has primary governmental authority. Its boundary is defined by tribal treaty, agreement, executive or secretarial order, federal statute, or judicial determination. A state American Indian reservation is an area that a state government has allocated to a tribe recognized by that state, but not by the federal government.

American Indian tribal subdivision – A legal subdivision of a federally-recognized American Indian reservation, off-reservation trust land, or Oklahoma tribal statistical area. These entities are internal units of self-government or administration that serve social, cultural, and/or economic purposes for American Indians.

Block number – A 4-digit number, plus 1 alpha character block suffix, if applicable, used by the Census Bureau to identify each census block. Census blocks are numbered uniquely within each census tract.

Boundary – A line, either invisible or coincident with a visible feature that identifies the extent of a geographic entity, such as a census tract, city, county, state, or reservation.

Boundary and Annexation Survey – An annual survey to collect information about selected legally defined geographic areas. The BAS is used to update information about the legal boundaries and names of all governmental units in the United States.

Census Bureau address list – A nationwide list of all housing unit and group quarter addresses known to the Census Bureau. In addition to the mailing address and ZIP Code, the address list may identify the location of each housing unit and group quarters.

Census block – A geographic area bounded by visible features, such as streets, roads, streams, and railroad tracks, and invisible features, such as the boundaries of governmental units and other legal entities. A census block is the smallest area for which the Census Bureau collects and tabulates statistical information. Census blocks are numbered within census tracts and are unique to the census tract to which they belong.

Census block number – Census block numbers contain a 4-digit number plus a 1-digit alpha character, if applicable, e.g. 3001A. Suffixes, such as 2011A and 2011B, reflect boundary changes as well as added features.

Census Bureau – An agency within the U.S. Department of Commerce. The Census Bureau is the country's preeminent statistical collection and dissemination agency. It publishes a wide variety of statistical data about people and the economy of the nation. The Census Bureau conducts approximately 200 annual surveys and conducts the decennial census of the United States population.

Census Bureau map – Any map produced by the Census Bureau. A Census Bureau map displays geographic entities used in a Census Bureau sponsored census or survey for which the Census Bureau tabulates data.

Census tract – A small, relatively permanent statistical division of a county or statistically equivalent entity, delineated for the purpose of presenting Census Bureau statistical data. Census tracts never cross the boundary of a county or statistically equivalent entity, but may split other geographic entities; e.g., minor civil divisions and places.

Census tract number – Unique numbers to identify census tracts within a county or statistically equivalent entity. Census tract numbers contain up to a 4-digit number followed by a decimal point and a 2-digit number for suffixed tracts, e.g., 1234.01. For census tracts without a suffix, the number will contain a period with zero fill, e.g., 4567.00. Leading zeros are not shown on Census Bureau maps.

Chief executive/highest elected official – The person most responsible for the governmental activities of a tribal government. This person receives the LUCA Program invitation letter, and must designate a LUCA tribal liaison, if desired.

City-style address – An address that consists of a house number and street name; for example, 201 Oak Street. The address may or may not be used for the delivery of mail and may include apartment numbers/designations or similar identifiers.

Confidentiality – The guarantee made by law (Title 13, United States Code) to individuals who provide information about themselves or their business to the Census Bureau. This item refers to the Census Bureau’s promise of nondisclosure of that information to others.

County – The primary legal division of most states. Most are governmental units with powers defined by state law.

Delivery Sequence File (DSF) – A computerized file containing all delivery point addresses serviced by the U.S. Postal Service (USPS). The USPS updates the DSF continuously as its letter carriers identify addresses for new delivery points or changes in the status of existing addresses.

Edges shapefile – All linear features in the MAF/TIGER database are contained in the edges shapefile. Use the edges shapefile to add, delete, or change linear feature attributes.

Enumeration – The process of interviewing people and recording the information on census forms.

Feature – Any part of the landscape, whether natural (a stream or ridge) or artificial (a road or power line). In a geographic context, features are any part of the landscape portrayed on a map, including nonvisible boundaries of legal entities, such as, city limits or county lines.

Federal Information Processing Standards codes (FIPS codes) – a standardized set of numeric or alphabetic codes issued by the National Institute of Standards and Technology (NIST) to ensure uniform identification of geographic entities through all federal government agencies. The entities covered include: states and statistically equivalent entities, counties and statistically equivalent entities, named populated and related location entities (places and county subdivisions), and American Indian and Alaska Native areas.

Geocodes – Codes that place an individual address in its correct geographic location, which includes the correct **state, county, census tract, and census block** codes.

Geographic Information System (GIS) – A computer system for the storage, retrieval, and maintenance of information about the points, lines, and areas that represent the streets and roads, rivers, railroads, geographic entities, and other features on the surface of the Earth-information that previously was available only on paper maps.

Governmental unit – A geographic entity established by legal action for the purpose of implementing specified governmental functions. Most governmental units provide a number of general government services and raise revenues (usually through taxing authority).

Group quarters – A place where people live or stay, in a group living arrangement, that is owned or managed by an entity or organization providing housing and/or services for the residents. This is not a typical household-type living arrangement. These services may include custodial or medical care as well as other types of assistance, and residency is commonly restricted to those receiving these services. People living in group quarters are usually not related to each other.

Group quarters include such places as correctional facilities, juvenile facilities, nursing homes, hospitals with long-term care facilities, college or university dormitories, fraternities, sororities, dormitories for workers, religious group quarters, shelters, group homes.

Housing unit (HU) – A single-family house, townhouse, mobile home, trailer, apartment, group of rooms, or a single room occupied as a separate living quarters or, if vacant, intended for occupancy as a separate living quarters. A separate living quarters is one in which one or more occupants (or intended occupants, if vacant) live separate from any other individual(s) in the building and have direct access to the living quarters without going through another living quarters, such as from outside the building or through a common hall.

Legal boundary – The legally defined boundary of a governmental unit, usually referring to a county, minor civil division, or incorporated place. The legal boundary identifies the area within a tribal government's jurisdiction, and thus bounds the area of LUCA responsibility.

LUCA tribal liaison – Also known as the program primary liaison or designated tribal liaison. A person voluntarily appointed by the chief executive/highest elected official of each reservation to review the Census Bureau's address list and maps against local records to identify differences.

MAF/TIGER Database – The Census Bureau's nationwide geographic database, which integrates the Master Address File (MAF) and Topologically Integrated Geographic Encoding and Referencing (TIGER) files.

MAF/TIGER Partnership Software (MTPS) – A GIS application provided by the Census Bureau that has customized functionality required by Census Bureau geographic partnership programs.

Map Sheet to Block Number Relationship List – A list identifying census block numbers and the Census Bureau map(s) on which each block is located.

Master Address File (MAF) – A nationwide database of all addresses to support many of the Census Bureau's operations. Besides containing mailing addresses and ZIP Codes, a MAF record also contains geographic information about the location of addresses. Now a part of the MAF/TIGER Database.

Metadata – describes the data content, coordinate system/projection, author, source, and other characteristics of GIS files.

Minor civil division (MCD) – A type of governmental unit that is the primary governmental or administrative subdivision of a county. MCDs are identified by a variety of terms, such as town (in 8 states), township, and/or district, and include both functioning and nonfunctioning governmental entities.

Noncity-style address – An address that does not have a house number and/or street name or may not include a complete house number and street name address. This includes rural route and box number address and highway contract route addresses, etc., which may include a box number, post office boxes and drawers, and general delivery.

Occupied housing unit – A housing unit is classified as occupied if it is the usual place of residence of the individual or group of persons living in it at the time of enumeration or if the occupants are only temporarily absent; for example, away on vacation. Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents, that is, individuals for whom the facility is their usual place of residence.

Place – A concentration of population either legally bound as an incorporated place or identified by the Census Bureau as a census designated place.

Regional Office – One of 12 permanent Census Bureau offices responsible for the Census Bureau's office and field operations within its region.

Shapefile – Data set used to represent geographic features such as streets and boundaries. Shapefiles can represent point, line, or area features and require GIS or mapping software.

Street segment – The portion of a street or road between two features that intersect that street or road, such as, other streets or roads, railroad tracks, streams, and governmental unit boundaries. The Census Bureau records the known address ranges for every street segment with city-style addresses.

Structure Point – A dot on a Census Bureau map, used to show the location of one or more living quarters. A 4-digit number plus 1-digit alpha character assigned within a census block to each structure point. Structure points are stored in the TIGER[®] database.

Topologically Integrated Geographic Encoding and Referencing (TIGER[®]) – A computer database that contains a digital representation of all map features (streets, roads, rivers, railroads, lakes, and so forth) required to support Census Bureau operations, the related attributes for each, and the geographic identification codes for all entities used by the Census Bureau to tabulate data for the United States, Puerto Rico, and Island Areas. Now a part of the MAF/TIGER Database.

Vacant housing unit – A habitable structure containing living quarters that is not occupied. New housing units not yet occupied are classified as vacant housing units if construction has reached a point where exterior windows and doors are installed and final usable floors and a roof are in place. Vacant units are excluded if open to the elements, or if there is positive evidence, such as a sign on the house, that the housing unit is to be demolished or has been condemned.
