| Other | Ensure all brake components are located so that an inspection can be safely conducted without an inspector placing himself in a precarious or unsafe position, (TB MP\&E 98-32). Check for any sharp or protruding objects or areas on the equipment that may create a safety concern or personal injury. Check for potential pinch points at all safety appliance arrangements. Check to ensure that all brackets used solely to support a safety appliance are mechanically fastened. The use of weld on brackets is prohibited. Check to ensure compliance with all applicable federal regulations. Verify coupler height $31 \frac{1}{2}$ inch minimum, $341 / 2$ inch maximum ~ allow up to, but no more than one inch over the maximum height for settling of new truck components. | 231.31(a)(1) |  |

## Footnotes:

1 TB MP\&E 98-18 Ladder treads, handholds of circular cross-section, $13 / 16$ inch diameter and sill steps, $5 / 8$ inch thick and 2 inches wide, when constructed of 6061-T6 aluminum alloy exceeds the current Federal Railroad Administration's requirements
2 Equivalent is determined by multiplying the cross sectional area the result of which may not be less than $3 / 4$ inch.
3 TB MP\&E 98-13 Clear depth means a vertical space the width of, and above the sill/side step material or strap and should be clear and unobstructed for 8 inches.
