Veterinary Practitioner Name				
Predominant Breed				

1. YES NO Sheep or goats inspected and found free of Scrapie
2. Clinical signs suggestive of scrapie observed by the producer or inspector

{ } No clinical Signs of Scrapie	{ } Excitable
{ } Incoordination	{ } Abortions
{ } Weight Loss	{ } Convulsions
{ } Itching/Rubbing	{ } Skin Abrasions from Rubbing
{ } Involuntary Muscle Tremors	{ } Nibbling and Licking Movements
3. YES NO NA Animals in the flock exhibiting signs of scrapie are immediately reported to a State representative, APHIS representative, or an accredited veterinarian.
4. YES NO Sexually intact animals officially identified when sold or they leave the premises
5. Written or computer records kept

YES NO Identification Type of Official ID used _____
YES NO Sales Information - ID, buyer, date sold
YES NO Purchase Information - ID, buyer, date purchased
YES NO Deaths - Date, Cause of Death
6. YES NO NA Exposed QR or RR ewes that were not removed or redesignated as part of the flock plan are retained until they die or are slaughtered or euthanized and to submit tissues from these sheep for official testing as directed by APHIS or the State.

 _____ Number of Exposed Ewes remaining in flock
7. YES NO Are Sire Rams Genotypes - Number RR _____; QR _____; QQ _____; Unknown _____
8. YES NO Discussed notification and testing plan for testing some animals that die at over 14 months of age.
9. YES NO NA Animals designated for testing are retained until they have been third eyelid tested or until they die or are euthanized and had tissues submitted for official testing.
10. YES NO Exposed Ewes with QQ Genotype Retained in Flock (If YES, go to 12)
11. COMMENTS:

Flock Owner Signature	Inspector Signature
-----------------------	---------------------

******ALL FLOCKS RETAINING EXPOSED QQ SHEEP******

12. Additional Record Keeping Requirements

YES NO Sex and Breed

YES NO Date of Birth

YES NO Animal Sire and Dam Information

13. YES NO All animals officially identified within the flock before they reach one year of age.

14. YES NO Retains all genetically susceptible exposed ewes that were not removed as part of the Flock plan or that are later added to the susceptible flock until they die, are slaughtered or are euthanized and to submit tissues from these sheep for official testing.

******TRACE FLOCKS RETAINING EXPOSED QQ SHEEP******

15. _____ Number of Exposed QQ sheep remaining in the flock

16. YES NO NA Genetically susceptible animals that were born after the high-risk animal lambed are not sold other than direct to slaughter unless they are third eyelid test negative at over 14 months of age. (The offspring of an RR ram, when only RR rams are present on the premises meet this requirement).

******PREVIOUSLY INFECTED/SOURCE FLOCKS RETAINING EXPOSED QQ SHEEP******

17. _____ Number of Exposed QQ sheep remaining in the flock

18. YES NO NA Sexually intact female sheep that are of unknown or QQ genotype and female goats are only removed from the premises by permit for slaughter, destruction, or research. (Offspring of an RR* ram, when on RR rams are present on the premises are considered R? sheep if they have not been genotype.)

19. YES NO No female goats have been added to the flock by purchase or natural addition until all genetically susceptible exposed ewes have been removed or this plan completed.

20. YES NO After each lambing, placenta and bedding are disposed of it by burial, incineration, or composting in an area to which animals do not have access.

21. YES NO NA Confined lambing facilities are cleaned at the conclusion of the lambing season in accordance with the guidelines published in the Scrapie Flock Certification Program standards.

22. Genetically susceptible ewes which are retained or are acquired

YES NO NA Are tested at over 14 months of age and prior to lambing by the third eyelid test and found negative. Susceptible sheep added to the flock after completion of the flock cleanup plan are tested at owner expense.

YES NO NA Are maintained separate and apart from the rest of the flock

YES NO NA Are identified with at least two forms of official ID including the APHIS provided EID

YES NO NA Only RR rams are kept in the separate area where genetically susceptible ewes are maintained; male animals maintained in the area where genetically susceptible ewes are maintained must be castrated, removed to another premises, or double tested RR before they reach sexual maturity
