

## **Narrative of Revisions**

*The purpose of the Narrative of Revisions is to clearly indicate revisions to a collection since the previous approval*

Collection Title: Waterfront Facilities Handling Liquefied Natural Gas (LNG)  
and Liquefied Hazardous Gas (LHG)

OMB Control No.: 1625-0049

Current Expiration Date: 08/31/2010

Collection Instruments: Instructions

The following listed below are revisions to the collection:

- Increase in burden (respondents/responses/burden hours) are due to 2 factors—
  - An increase in the number of respondents from 107 to 168, which results in an increase in responses and burden.
  - A change in the requirements per rulemaking USCG-2007-27022/RIN 1625-AB13, specifically the addition of a new requirement for a Waterway Suitability Assessment (WSA). The WSA is an applicant-prepared risk-based assessment designed to document and address all safety and security concerns related to the movement of LNG for a particular U.S. port or waterway.
  - The existing OMB-approved total annual burden is 2,838 hours. The rulemaking RIN 1625-AB13 increases that number by 6,666 hours, which includes 4,928 hours for the addition of a WSA to the collection of information, and 1,738 hours to account for a change in the number of respondents. The revised estimated total annual burden is 9,504 hours.
- USCG has created printable instructions for this collection of information.
- Updates are provided for cost burden and government cost associated with this collection of information.
- On May 26, 2010, the Coast Guard published the LNG-LHG Final Rule [75 FR 29420].
