

## U.S. Department of the Interior

[Date]

Dear Moderate-Resolution Imagery User,

A few days ago we sent you an email asking you to participate in a nationwide survey regarding the uses and applications of moderate-resolution imagery and the societal benefits it provides. To the best of our knowledge, we've not heard from you yet.

People who have responded have described their experiences, good and bad, in working with moderate-resolution imagery and their desires for how it might be improved. Their insights and input will be extremely useful to policy and decision makers currently discussing the next generation of moderate-resolution satellites, including Landsat.

For this survey to be successful, your input is vital. Only by hearing from nearly everyone we've contacted can we be sure that the results are truly representative of the moderate-resolution imagery user community.

Your voluntary participation in this survey has been approved through the requirements of the Office of Management and Budget (OMB Control # XXX). Participant responses will be released only as summaries; no personal information can be identified. When you submit your completed on-line survey, your email address will be deleted from the mailing list.

Please take a few minutes right now to complete this important survey. If you have any questions or comments, contact us at [fort\\_survey\\_tech@usgs.gov](mailto:fort_survey_tech@usgs.gov).
