DEPARTMENT OF THE TREASURY

ALCOHOL TOBACCO TAX AND TRADE BUREAU

Supporting Statement - Information Collection Request

OMB Control Number 1513-0101

TTB REC 5210/13 - Marks and Notices on Packages of Tobacco Products

A. JUSTIFICATION

1. What are the circumstances that make this collection of information necessary and what legal or administrative requirements necessitate the collection?

This submission covers the requirement to obtain information for revenue protection by having the manufacturer, or exporter place a mark and notice indicating the tax classification and quantity on packages, cases, or containers.

Statutory authority for labeling and marking requirements pertaining to tobacco products is set forth in 26 U.S.C. 5723.

Regulatory requirements pertaining to this statutory authority are set forth in:

27 CFR 44.184 27 CFR 4 27 CFR 44,185 27 CFR 4 27 CFR 44.186 27 CFR 4 27 CFR 44.187 27 CFR 4	
27 CFR 44.251 27 CFR 4 27 CFR 44.252 27 CFR 4 27 CFR 44.253 27 CFR 4 27 CFR 44.254	15.43 15.44 15.45 15.45a 15.45b

2. How, by whom and for what purpose is this information used?

TTB needs this information on packages of tobacco products to assure effective administration of the Federal excise taxes imposed on tobacco products. TTB is responsible for the collection of the tax on tobacco products and in conjunction with that function TTB uses the mark and notice to ensure that taxes paid or liability on tobacco products may be verified. Collection of the tax on imported tobacco products and the

protection of the revenue on exported tobacco products are facilitated by the required package information.

3. To what extent does this collection of information involve the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology? What consideration is given to use information technology to reduce burden?

The information collection involves a third party disclosure that is affixed on packages and containers, and therefore the use of automated electronic or other forms of information technology is generally not applicable. TTB will approve, on a case-by-case basis, the use of improved information technology to affix labels.

4. What efforts are used to identity duplication? Why can't any similar information already available be used or modified for use for the purposes described in Item 2 above?

To avoid duplication, the marks and notices on containers are specific to each container. As far as we can determine, similar information is not available any where else.

5. If this collection of information impacts small businesses or other small entities, what methods are used to minimize burden?

This collection of information does not have a significant impact on a substantial number of small businesses or other small entities. It is information that is maintained by the manufacturer as part of cost and quality control measures, and the amount required to be displayed is minimal.

6. What consequences to Federal program or policy activities and what, if any, technical or legal obstacles to reducing burden will occur if this collection is not conducted or is conducted less frequently?

The mark and notice requirement is considered to be the minimum necessary to ensure compliance. The marks and notices contain the minimum amount of information necessary to maintain accountability within the system; any less information would make the requirement meaningless. Less frequent collection of this information would pose jeopardy to the revenue.

7. Are there any special circumstances associated with the information collection?

There are no special circumstances associated with this information collection.

8. What effort was made to notify the general public about this collection of information?

A 60-day Federal Register notice was published for this information collection on Friday, April 25, 2008, 73 FR 22462. The notice solicited comments from the general public. We received no comments.

9. What decision was made to provide any payment or gift to respondents, other than reenumeration of contractors or grantees?

No payment or gift is provided to respondents.

10. What assurance of confidentiality was provided to respondents and what was the basis for the assurance in statute, regulations, or agency policy?

This collection is a third party disclosure on packages and containers to which assurances of confidentiality are not applicable.

11. What justification is there for questions of a sensitive nature?

We do not ask questions of a sensitive nature.

12. What is the estimated hour burden of this collection of information?

Although there are 120 respondents there is only 1 burden hour since placing marks and notices on packaging is an activity that the respondent performs in the normal course of doing business.

13. What is the estimated total annual cost burden to respondents or recordkeepers resulting from this collection of information?

There is no cost associated with this collection.

14. What is the annualized cost to the Federal Government?

There is no cost to the Federal Government.

15. What is the reason for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I?

There are no program changes or adjustments associated with this collection.

16. Outline plans for tabulation and publication for collections of information whose results will be published.

The results of this collection of information will not be published.

17. If seeking approval to not display the expiration date for OMB approval of this information collection, what are the reasons that the display would be inappropriate?

It would be inappropriate to display the expiration date for OMB approval because this is a labeling requirement that is affixed by the respondent, and unlike a form, there is no medium for us to display the date.

18. What are the exceptions to the certification statement?

There are no exceptions to the certification statement.

B. <u>Collection of Information Employing Statistical Methods.</u>

This collection of information does not employ statistical methods.
