

Do you live in the State of Georgia and have a 3-, 4-, or 5-year old child with spina bifida?

Little is known about the natural history of spina bifida. This information is very important and needed to inform guidelines and recommendations for families with a child with spina bifida.

The Centers for Disease Control and Prevention (CDC) are recruiting families from Georgia with a 3-, 4-, or 5- year-old child diagnosed with spina bifida to participate in a research study about the natural history of spina bifida.

We value your input and would like to speak with you.

No invasive procedures involved.

Compensation provided.
