**ABSTRACT:**

The National Cancer Institute (NCI) proposes conducting a Web-based survey with representation from a range of personnel at NCI-designated cancer centers to help inform the development of materials and tools that will support increased accrual to clinical trials. The goal of this formative needs assessment is to better understand the prevalence of promising practices to support accrual to clinical trials. These assessment data will be collected from and analyzed among and within responding institutions. The current research design will focus on collecting data from persons in the cancer centers who have day-to-day responsibility for clinical trial accrual and who are in a position to know about how accrual functions in their center.
