

**RETROVIRUS EPIDEMIOLOGY DONOR STUDY-II (REDS-II)
HBV/HCV RISK FACTOR QUESTIONNAIRE**

You are being asked to take part in a research survey which is jointly conducted by _____ Red Cross Blood Center, Institute of Blood Transfusion (of Chinese Academy of Medical Sciences), the Johns Hopkins School of Medicine and the United States National Institute of Health. The objective of this survey is to learn about the risk factors for HBV and HCV infection among blood donors. Results from this survey will be used to design more effective mechanisms to further improve blood safety.

Information provided by our volunteer blood donors is very valuable in further improving blood safety. We appreciate your participation in the questionnaire study. We would like to ask you some questions about your health and lifestyles. It will take about 20 minutes to complete these questions. In order to protect your confidentiality, your name and other personal identifiable information will not be asked. You are assigned a study number. Your answers will be identified by your study number, not by any of your personal information. Protecting donors' privacy and confidentiality is a very important goal of our work. This study protocol has been reviewed and approved by research ethic committees at Chinese Academy of Medical Science and Johns Hopkins School of Medicine.

Your participation is voluntary. You have the right to not answer any question or withdraw at any time. But we would like you to be as complete and truthful as possible for those questions you do answer. After you finish the questionnaire, please mail it directly to us using the enclosed pre-addressed, postage-paid return envelope. To protect your privacy, please do not write down your name on the questionnaire or the envelope. In stead of filling this form, you may also complete this survey online at our website: www.fei???.com.cn.)

Please be aware that the questionnaire is only used for the purpose of identifying risk factors for viral hepatitis, and not for any other purposes, such as disease diagnosis. This survey includes donors who may or may not have had preliminary abnormal results from donor screening. If you had a preliminary abnormal test result, you should have been notified by our blood center. In this case, please follow blood center's advice to seek further testing if you have not already done so. But if you have not received notification from the blood center for further testing, you may not need to do so because your donor screening test results were normal.

Thank you for taking the time to help us with this important study. Please accept the RMB 10 as a token of our gratitude for your effort. If you have any question about the study, please call local blood center at _____. Thanks for your contribution to blood safety.
