

Note To Reviewer

Revision to Form 33 (From Voluntary to Require)

OSHA is proposing to require that all State Onsite Consultants (Consultants) use the Revised Form 33 (revised in October, 2000) if they collect information in the course of their consultation visit. There is no additional burden to the consultant. By requiring the use of the form, data will be standardized and will ease analysis of data. In addition, by requiring the form Consultants will have a valuable tool to ensure all necessary safety and health programs elements are assessed.
