

FINAL SUPPORTING STATEMENT FOR 10 CFR PART 30  
"RULES OF GENERAL APPLICABILITY TO DOMESTIC LICENSING OF  
BYPRODUCT MATERIAL"  
(3150-0017)

---

CLEARANCE EXTENSION WITH BURDEN REVISIONS

Description of Information Collection

The Nuclear Regulatory Commission's regulations in 10 CFR Part 30 establishes rules applicable to all persons in the United States governing domestic licensing of radioactive byproduct material. The regulations were issued pursuant to the Atomic Energy Act of 1954, as amended, Title II of the Energy Reorganization Act of 1974, as amended, and exemptions from the domestic licensing requirements permitted by Section 81 of the Act. Among the provisions of the licenses issued by the Nuclear Regulatory Commission are conditions which impose requirements on the licensee, including reporting and recordkeeping. These include frequently used established standard license conditions and less frequently used new technology/uses standard license conditions.

Some of the conditions imposed are specific to the particular licensee as dictated by that licensee's particular facilities, equipment, or type of use of material. Other conditions are applied more generally--some to all licensees, and some to certain types of licensees based on the category of use of radioactive material (e.g., radiography, medical human use, etc.). Those are known as "Established standard license conditions." Established standard license conditions are utilized by NRC and the Agreement States to ensure that provisions for protection of public health and safety are imposed consistently among licensees. They are used in conjunction with the requirements in Title 10 of the Code of Federal Regulations (10 CFR) that the licensee commits to when applying for a license. Those standard license conditions which contain reporting or recordkeeping requirements are described in detail in Section 30.34(e)(4).

The new technology/uses standard license conditions are imposed on individual licensees and groups of licensees engaged in new materials uses or the use of new technologies in established materials uses. New technology/uses standard license conditions will be utilized by all NRC regions to ensure that provisions for protection of public health and safety are imposed consistently among licensees. They are used in conjunction with the requirements in Title 10 of the Code of Federal Regulations (10 CFR) that the licensee commits to when applying for a license. Those new technology/uses standard license conditions which contain reporting or recordkeeping requirements similar to those in the regulations and established license conditions are described in Section 30.34(e)(4).

In this rulemaking, the NRC amended its regulations to include jurisdiction over discrete sources of radium-226, accelerator-produced radioactive materials, and discrete sources of naturally occurring radioactive material, as required by the Energy Policy Act of 2005 (EPAAct), which was signed into law on August 8, 2005. This provides a regulatory framework by which to license and regulate byproduct material in accordance with the new, expanded definition. Hours associated with this rulemaking were incorporated into the clearance for 10 CFR 30 in November 2008.

This clearance extension incorporates the information collections contained in the final rulemaking, "Requirements for Expanded Definition of Byproduct Material," amending 10 CFR Part 30, in addition to other parts, and approved by OMB since the last extension period.

A. Justification

1. Need for and Practical Utility of the Collection of Information

Section 30.9(b) requires that an applicant or licensee notify the Commission of information which the applicant or licensee recognizes as having significant implications for public health and safety or the common defense and security. This requirement applies only to information which is not already required to be provided to the Commission by other reporting or updating requirements. The information must be provided within 2 working days to the administrator of the appropriate NRC regional office.

This requirement is necessary because there may be some circumstances in which a licensee possesses some information which could be important to the protection of public health and safety or the common defense and security, but which is not otherwise required to be reported. The codification of this full disclosure requirement should not result in significant additional burdens on applicants or licensees. No formal program is required. It is expected that licensees will maintain a professional attitude toward safety and that, if some potential safety information is identified by the licensee, the information will be provided freely and promptly to the NRC so that the agency can evaluate it and act on it, if necessary.

Section 30.11 provides that the Commission may, upon the application of any interested person or on its own initiative, grant exemptions from the requirements of 10 CFR Parts 30-36 and 39 under specified conditions.

The information submitted under this section is examined by the NRC to determine whether the requested exemption is authorized by law, and will not endanger life or property or the common defense and security, and is otherwise in the public interest.

Section 30.15(b) requires that any person who desires to apply byproduct material to, or to incorporate it into, the products exempted in Section 30.15(a), or who desires to initially transfer for sale or distribution such products containing byproduct material, apply for a specific license pursuant to Section 32.14. Such a license indicates that the product may be distributed by the licensee to persons exempt from the regulations (hereinafter "exempt persons").

The information on the application is necessary to permit the NRC to determine whether the proposed use of byproduct material provides adequate protection of public health and safety. The NRC review of the information and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, AApplication for Material License, @ is used to collect this information and is cleared under OMB Clearance No. 3150-0120.

Section 30.18(d) indicates that no person may, for purposes of commercial distribution, transfer byproduct material in the quantities set forth in Section 30.71,

Schedule B, to exempt persons, except in accordance with a license issued under Section 32.18.

The information on the application is necessary to permit the NRC to determine whether the proposed use of byproduct material provides adequate protection of public health and safety. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.19(b) requires that any person, who desires to manufacture, process, or produce self-luminous products containing tritium, krypton-85, or promethium-147, or to transfer such products to exempt persons for use, apply for a license pursuant to Section 32.22, with a license provision that the product may be transferred to exempt persons.

The information on the application is necessary to permit the NRC to determine whether the proposed use of byproduct material provides adequate protection of public health and safety. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.20(b) requires that any person, who desires to manufacture, process, or produce gas and aerosol detectors containing byproduct material, or to initially transfer such products to exempt persons for use, apply for a license pursuant to Section 32.26, with a license provision that the product may be initially transferred to exempt persons.

The information on the application is necessary to permit the NRC to determine whether the proposed use of byproduct material provides adequate protection of public health and safety. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.21(b) requires that any person who desires to use the capsules for research involving human subjects shall apply for and receive a specific license pursuant to part 35 of this chapter. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.21(c) requires that any person who desires to manufacture, prepare, process, produce, package, repack, or transfer for commercial distribution capsules containing carbon-14 urea for "in vivo" diagnostic use, apply for a license pursuant to Section 32.21, with a license provision that the product may be transferred to exempt persons.

The information on the application is necessary to permit the NRC to determine whether the proposed use of byproduct material provides adequate protection of public health and safety. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.32(a) requires that applications for specific licenses for byproduct material be submitted on NRC Form 313, "Application for Material License." The NRC reviews the information submitted on the NRC Form 313 to determine whether an applicant for a license has training, experience, equipment, facilities, and procedures for the use of byproduct material that are adequate to protect the public health and safety. NRC Form 313 is cleared under OMB Clearance No. 3150-0120.

Section 30.32(b) provides that NRC may require further statements after the filing of the application, and before the expiration of the license, to enable NRC to determine whether the application should be granted or denied or whether a license should be modified or revoked. Such additional information is sometimes needed to clarify information submitted in the application, or to rectify deficiencies in proposed or existing programs for protection of the public health and safety, the common defense and security, or the environment.

The additional information is reviewed by various NRC organizational units to assess the adequacy of the applicant's physical plant, procedures, and plans for protection of the public health and safety, common defense and security, and the environment. The NRC review and the findings therefore form the basis for NRC decisions concerning the issuance, modification, or revocation of licenses for byproduct material.

The burden and cost associated with further statements is included in the burden and cost data for submittal of applications on NRC Form 313, which is cleared under OMB Clearance No. 3150-0120.

Section 30.32(f) requires that an application for a license to receive and possess byproduct material for the conduct of any activity which the Commission determines will significantly affect the quality of the environment must be filed at least 9 months prior to commencement of construction of the plant or facility in which the activity will be conducted and shall be accompanied by an environmental report required pursuant to 10 CFR Part 51, Subpart A.

Facilities for commercial waste disposal, or other activities covered by this section, are generally large and complex and have the potential to significantly affect the quality of the human environment. NRC's consideration of environmental effects and balancing of alternatives for the project, as mandated by the "National Environmental Policy Act of 1969," which applies only to Federal Government actions, requires the applicant to submit a comprehensive and detailed environmental report. The NRC licensing staff reviews the environmental report to assure that it is complete and that it considers and balances alternatives for the project in order to best protect the environment.

This section refers to and requires the submission of information pursuant to 10 CFR Part 51. The collection of information, the burden imposed on respondents, and the cost to the Government is contained in the supporting statement for 10 CFR Part 51, which is cleared under OMB Clearance No. 3150-0021.

Section 30.32(g) requires that an application for a specific license to use byproduct material in the form of a sealed source or in a device that contains a sealed source must either identify the source or device by manufacturer and model number, as registered with the NRC under Section 32.210 or with an Agreement State, or contain the radiation safety related information that is identified in Section 32.210(c). The section also includes the requirement that the application identify the manufacturer and model number for sources and devices containing radium-226 as registered with a state, and describes information that can be submitted for legacy sources that are not registered. This determination is used to establish that the applicant's proposed equipment and facilities are adequate to protect health and minimize danger to life or property. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.32(h) requires that, as provided by Section 30.35, certain applications for specific licenses must contain a proposed decommissioning funding plan or a certification of financial assurance for decommissioning. Section 30.35 sets forth the requirements for financial assurance and recordkeeping for decommissioning.

The burden and cost data for the information provided in these applications is included under Section 30.35.

Section 30.32(i) requires applicants that will possess amounts of materials requiring an emergency plan to either submit an evaluation demonstrating an emergency plan is not needed or to provide the emergency plan. Those requiring an emergency plan must also commit to providing prompt notification to offsite response organizations and NRC in the event of an event triggering the emergency plan. The evaluation or emergency plans are submitted in the new license application, amendment, or renewal process. NRC Form 313, Application for Material License, is used to collect this information and is cleared under OMB Clearance No. 3150-0120.

The records and reports required in Section 30.32(i) are necessary for the Commission to determine whether the applicant will be able to respond adequately to an accident and to provide the proper notifications to NRC and off site response organizations to adequately protect the public health and safety in the event of an accident.

Section 30.32(j) requires that an application from a medical facility, educational institution, or Federal facility for authorization to produce Positron Emission Tomography (PET) radioactive drugs for noncommercial transfer to licensees in its consortium authorized for medical use include information including evidence of an existing license for a PET radionuclide production facility within the consortium, the applicant's and authorized user's qualifications, and confirmation that the PET drugs to be noncommercially transferred. The NRC review and the findings therefore form the basis for NRC licensing decisions. NRC Form 313, which is used to collect this information, is cleared under OMB Clearance No. 3150-0120.

Section 30.32(j)(3) requires that licensees must notify NRC when an existing authorized nuclear pharmacist (ANP) begins working at the pharmacy that produces PET drugs as provided under 10 CFR 32.72(b)(2).

Section 30.34(b) requires that the licensee provide full information before transferring, assigning, or in any manner disposing of any license through transfer of control to any person. No action is required of a licensee unless and until a transfer of control is initiated.

The information required by Section 30.34(b) is used only to verify that the licensing information that was previously submitted on Form 313, Application for Material License, is still correct, and to permit the NRC to determine whether the proposed licensee provides adequate resources to protect public health and safety. The NRC review of the information and the findings therefore form the basis for NRC licensing decisions.

Section 30.34(e) permits the Commission to incorporate in any license issued pursuant to the regulations in 10 CFR Parts 30-36 and 39, by appropriate rule, regulation or order, additional requirements and conditions with respect to the licensee's receipt, possession, use, and transfer of byproduct material. In addition, reports and the keeping of records may be required, as necessary, to fulfill the purposes of the Atomic Energy Act and regulations of the Commission.

Established Standard License Conditions:

These conditions are developed based on the licensee's particular facilities, equipment, or type of use of material or based on the category of use of radioactive material (e.g., radiography, medical human use, etc.). These conditions are used by all NRC regions to ensure that provisions for protection of public health and safety are imposed consistently among licensees. The established standard license conditions which contain reporting or recordkeeping requirements are described in detail below.

Conditions 22 and 23 Licensed material shall only be used by, or under the supervision of, individuals designated, in writing, by the Radiation Safety Committee (condition 22). The licensee shall maintain records of individuals designated as users for 3 years after the individual's last use of licensed material. Licensed material shall be used by or under the supervision of individuals designated, in writing, by the Radiation Safety Officer (condition 23). The licensee shall maintain records of individuals designated as users for 3 years after the individual's last use of licensed material.

Condition 26 Licensed material contained in Fixed Gauges and Self-shielded Irradiators shall be used by, or under the supervision of, individuals who have received the training described in an application. The licensee shall maintain records of individuals designated as users for 3 years following the last use of licensed material by the individual.

Condition 140 provides that certain licensees may be authorized to hold radioactive material with a physical half-life of less than or equal to 65 or 120 days

for decay-in-storage before disposal in ordinary trash, provided it is held for decay a minimum of 10 half-lives, is determined that its radioactivity cannot be distinguished from background, and all radiation labels are removed or obliterated. The licensee shall maintain a record of each such disposal permitted under this license condition for 3 years. The record must include the date of disposal, the date on which the byproduct material was placed in storage, the radionuclides disposed, the survey instrument used, the background dose rate, the dose rate measured at the surface of each waste container, and the name of the individual who performed the disposal.

Condition 164 The licensee shall conduct a physical inventory every 6 months, or at other intervals approved by the U. S. Nuclear Regulatory Commission, to account for all sources and/or devices received and possessed under the license. Records of inventories shall be maintained for 5 years from the date of each inventory and shall include the radionuclides, quantities, manufacturer's name and model numbers, and the date of the inventory.

Condition 165(i) requires that the licensee maintain records of leak test results in units of microcuries for 5 years.

The new technology/uses standard license conditions:

These conditions are imposed on individual licensees and groups of licensees engaged in new materials uses or the use of new technologies in established materials uses. These conditions are developed to account for the unique properties of the new uses or new technologies and used to ensure the same degree of public health and safety is applied uniformly for similar established and developing materials uses. In most cases, the new technology/uses standard recordkeeping conditions are used to modify the specific information required in recordkeeping requirements for a similar established use. These are also used to document alternative procedures needed to meet the objective of a procedure specifically included in the regulations or established standard license conditions (such as leak test that cannot be performed as described in either the regulations or the established standard leak test license condition). In a few cases, the recordkeeping requirement will be needed to assure unique safety significant information is retained. The new technology/uses standard license conditions may also be used to ensure reporting of events involving the new materials uses and new technologies that are substantially the same as existing reportable events contained in the regulations but are not technically described in the regulation (e.g., reporting an error in the medical use of an emerging medical technology when the unique characteristics of the technology are not specifically addressed in the medical event reporting regulation).

## Orders

This regulation is also cited as the authority, when necessary, for the issuance of orders for the modification of licenses. The Commission may issue an order when licensees are not in compliance with the existing regulations, or in cases where a new safety issue is identified and the existing regulations are not adequate. In addition, orders may be issued when a new threat to the common defense and

security has occurred. Typically the Commission may issue 2 to 3 orders per year. However, in light of the events on September 11, 2001, certain licensees are required to take compensatory actions against terrorist threats. These compensatory actions are issued as orders and may range in numbers from a few orders a year to several hundred.

When the issuance of such orders involves the imposition of reporting or recordkeeping requirements, requests for OMB clearance of the specific information collection requirements are submitted, as necessary.

The information is used by the NRC staff to verify that the licensee has performed required actions in a complete and timely manner.

Section 30.34(g) requires each licensee preparing technetium-99m radio-pharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from strontium-82/rubidium-82 generators to test the generator elute for molybdenum-99 breakthrough or strontium-82 and strontium-85 contamination, respectively, in accordance with Section 35.204. The licensee is required to record the results of each test and maintain records of the test results for 3 years.

The requirement to maintain the records of test results is necessary to permit the NRC inspection staff to determine that nuclear pharmacy licensees and broad medical licensees have conducted the tests to determine the amount of molybdenum-99 in technetium-99 or strontium-82 and strontium-85 in rubidium-82 radioactive drugs before administration to patients. If excessive molybdenum-99, strontium-82, or strontium-85 is present, it would result in unnecessary radiation doses to patients.

Section 30.34(h) requires that each specific licensee and certain general licensees immediately notify the appropriate NRC regional administrator, in writing, following the filing of a bankruptcy petition by or against the licensee or a controlling or affiliate entity. No action is required of a licensee unless and until a petition for bankruptcy is filed.

This information is needed because a licensee who is experiencing severe economic hardship may not be capable of carrying out licensed activities in a manner that protects public health and safety. In particular, a licensee involved in bankruptcy proceedings can have problems affecting payment for proper handling of licensed radioactive material and for decontamination and decommissioning of the licensed facility in a safe manner. Improper materials handling or decontamination activities can lead to spread of contamination throughout a licensee's facility and the potential for dispersion of contaminated material offsite. Financial difficulties can also result in problems affecting the licensee's waste disposal activities.

The information provided by the notification is used by the NRC regional inspection and licensing staff, in consultation with headquarters legal and program staff, to determine the need for prompt NRC response or regulatory action in the event of a potential hazard to public health and safety posed by a licensee that does not have the resources to properly secure the licensed material or clean up

possible contamination. In addition, prompt notification would allow the Commission to take timely and appropriate action in a bankruptcy proceeding to seek to have available assets of the licensee applied to cover costs of cleanup before funds are disbursed and become unavailable for cleanup.

Section 30.34(j)(2)(i) requires that each licensee authorized to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium must satisfy the labeling requirements in 10 CFR 32.72(a)(4) for each PET radioactive drug transport radiation shield and each syringe, vial, or other container used to hold a PET radioactive drug intended for noncommercial distribution to members of its consortium.

Section 30.34(j)(2)(ii) requires that each licensee authorized to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium must possess and use instrumentation to measure the radioactivity of the PET radioactive drugs intended for noncommercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check, and instrument adjustment requirements in § 32.72(c) of this chapter.

Section 30.35 sets forth the requirements for financial assurance and recordkeeping for decommissioning. Sections 30.35(a) and (b) specify which licensees are required to submit a decommissioning funding plan or a certification that financial assurance for decommissioning has been provided. Sections 30.35(c) and (d) specify the criteria for and required amounts of financial assurance for decommissioning. Section 30.35(e) specifies the content of the decommissioning funding plan and requires that decommissioning cost estimates be updated every three years. Section 30.35(f) specifies acceptable methods for providing for financial assurance for decommissioning: either through prepayment; a surety method, insurance or other guarantee method; or, in the case of Government licensees, a statement of intent containing a cost estimate for decommissioning

Section 30.35(g) requires that each person licensed under 10 CFR Parts 30, 32-36, and 39 keep records of information important to the safe and effective decommissioning of the facility until the license is terminated by the Commission. Licensees are required to list in a single document (to be held by the licensee and updated once every 2 years) identification of all restricted areas where licensed materials were used or stored, all areas outside of restricted areas where documentation is required for unusual occurrences or spills, and all areas outside of restricted areas where waste has been buried or which contain material such that, if the license expired, the licensee would be required to either decontaminate the area or seek special approval for disposal. This information is needed by the NRC to ensure that no future users of the site will be inadvertently exposed to radiation.

The records and reports required by Section 30.35 are necessary for the Commission to determine whether an applicant will be able to carry out the requirements of Section 30.36 which specify that licensed premises must be decontaminated to a level "suitable for release for unrestricted use" before the

license may be terminated. NRC will review the information to ensure that adequate funds will be available to ensure that the applicant will conduct decontamination efforts in a timely manner and minimize exposure of workers to radioactive materials. The information will also be used to ensure that the decontamination efforts will reduce the residual radioactive contamination sufficiently to protect the public health and safety after the site is released for unrestricted use.

Section 30.36 specifies procedures for terminating licensee responsibility for nuclear materials and clarifies that a license will continue in effect, with respect to possession of byproduct material, until the Commission notifies the licensee in writing that the license is terminated. Section 30.36(d) requires each licensee to notify the Commission in writing of its decision not to renew its license and to either begin decommissioning its site or submit within 12 months of notification a decommissioning plan. Section 30.36(e) requires that coincident with the notification required by Section 30.36(d), licensees maintain all decommissioning financial assurances established by the licensee pursuant to Section 30.35. Section 30.36(e)(2) allows, following approval of the decommissioning plan, that a licensee may reduce the amount of the financial assurance as decommissioning proceeds and radiological contamination is reduced at the site with the approval of the Commission. Section 30.36(g) requires that a decommissioning plan be submitted, if required by license condition or if the proposed procedures and activities necessary to carry out the decommissioning have not been previously approved by the Commission, and these procedures could increase potential health and safety impacts to workers or to the public.

Section 30.36(h) requires licensees in certain circumstances to request license termination (a license amendment process whose burden and cost is included in the supporting statement for NRC Form 313, which is cleared under OMB Clearance No. 3150-0120).

All of the above information required by Section 30.36 is reviewed by the NRC to determine that there is no significant risk to public health and safety before a licensee's responsibility for nuclear materials is terminated and a facility is released for unrestricted use.

Section 30.36(j) requires, as a final step in decommissioning, that a licensee certify the disposition of all licensed material, including accumulated wastes, by submitting a completed NRC Form 314, "Certificate of Disposition of Materials." In addition, this section requires that the licensee conduct a radiation survey of the site where the licensed activities were carried out and note on NRC Form 314 whether or not the survey was conducted and, if so, attach the results, if not separately forwarded to NRC. The radiation survey, similar to those generated during operations, is required to confirm the absence of radioactive materials or to establish the level of residual radioactive contamination. The information on disposal of nuclear materials and the survey are considered the minimum information necessary to establish a record to support a finding that a license can be safely terminated. NRC Form 314 is cleared under OMB Clearance No. 3150-0028.

Section 30.37(a) requires that an application for renewal of a specific license be filed in accordance with Section 30.32. The NRC reviews the information submitted to determine whether an applicant for a license renewal has training, experience, equipment, facilities, and procedures for the use of byproduct material that are adequate to protect the public health and safety.

The burden and cost data for these applications for renewal of specific licenses have been included in the supporting statement for NRC Form 313, which is cleared under OMB Clearance No. 3150-0120.

Section 30.38 requires that an application for amendment of a license be filed in accordance with Section 30.32. The NRC reviews the information submitted to determine whether the licensee has training, experience, equipment, facilities, and procedures for the use of byproduct material that are adequate to protect the public health and safety.

The burden and cost data for these applications for license amendments have been included in the supporting statement for NRC Form 313, which is cleared under OMB Clearance No. 3150-0120.

Sections 30.41(c) and (d) Section 30.41(c) requires that, before transferring byproduct material to a specific licensee or a general licensee who is required to register prior to receipt of byproduct material, the transferor must verify that the transferee's license authorizes receipt of the type, form, and quantity of byproduct material to be transferred. Section 30.41(d) specifies methods acceptable to the Commission for accomplishing the required verification, including:

- (1) The transferor may have in his possession, and read, a copy of the transferee's specific license or registration certificate.
- (2) The transferor may have a written certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of byproduct material to be transferred, specifying the license or registration number, issuing agency, and expiration date.
- (3) For emergency shipments, the transferor may accept oral certification from the transferee, provided it is confirmed in writing within 10 days.
- (4) The transferor may obtain other sources of information compiled by a reporting service from official records of the Commission or Agreement State licensing agency.
- (5) When the above methods of verification are not available, the transferor may obtain and record confirmation from the Commission or Agreement State licensing agency.

The information required by Sections 30.41(c) and (d) is used by transferring licensees to provide assurance that the licensed byproduct material is being transferred to a person who is authorized to receive it. This verification serves as an additional check to prevent transfer of byproduct material to persons who may

not have the facilities, training, experience, equipment, or procedures necessary for the safe handling of the material. Records of these certifications will be reviewed by NRC inspectors during periodic inspections to ensure that licensees have been complying with verification requirements.

Section 30.50 requires licensees to notify NRC of events or conditions that threaten the health and safety of individuals either using or potentially exposed to licensed material.

Section 30.50(a) requires licensees to notify the NRC as soon as possible, but no later than 4 hours, of events that prevent immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed regulatory limits or releases of licensed material that could exceed the regulatory limits.

Section 30.50(b) requires licensees to notify the NRC within 24 hours after the discovery of any of the following events involving licensed material. Licensees must report unplanned contamination events, such as those in which access to an area must be restricted for more than 24 hours by imposing additional radiological controls or by prohibiting entry into the area. It is important that the NRC be notified in such cases because accidental contamination events increase radiation exposure and the risk of ingesting radioactive material. Licensees are required to report events in which equipment necessary to prevent uncontrolled releases of radioactive material, to prevent overexposure to radiation, or to mitigate the consequences of an accident is disabled or fails to function as designed. This includes procedural errors, equipment failure, equipment damage, etc. This notification is necessary in situations in which there are no backup systems available to perform the required safety function. Notification is not required for an individual component failure if redundant systems are operable and available to automatically perform the required function. Licensees are required to report events that require medical treatment of a radioactively contaminated individual at a medical facility. Such events are significant because they may: (1) indicate safety problems in a licensed operation, (2) risk internal contamination through open wounds, and (3) expose medical personnel to radiation and contamination. Prompt notification is necessary so that NRC can ensure that an evaluation is performed and that measures are taken to prevent recurrence. Licensees are also required to report all fires and explosions damaging any licensed material or any device, container, or equipment containing licensed material, so that such events may be promptly evaluated and measures taken to minimize any spread of contamination and determine the performance of features designed to control licensed material.

Licensees are required to make the reports required by Sections 30.50(a) and (b) by telephone to the NRC Operations Center.

Section 30.50(c)(2) requires that, in addition to the telephone report, licensees must submit a written follow-up report within 30 days which includes, in addition to descriptive information, an evaluation of the probable cause, a description of corrective actions taken or planned, and the results of any evaluations or assessments.

Section 30.51 establishes overall record retention requirements applicable to byproduct material licensees for cases in which retention periods are not otherwise specified in the regulations.

Section 30.51(a) requires that each licensee who receives byproduct material must keep records showing the receipt, transfer, and disposal of the byproduct material. It provides for retention of records of receipt of byproduct material as long as the material is possessed and for 3 years following transfer or disposal of the material, provides a 3-year retention period for records of transfer of byproduct material, and provides that records of disposal of licensed material must be maintained until the Commission terminates the license that authorizes the disposal.

Section 30.51(b) requires that records which are required by the regulations in 10 CFR Parts 30-36 and 39 or by license conditions must be maintained for the period specified by the appropriate regulation or license condition. In any case in which a retention period is not specified, the records must be maintained until the Commission terminates the license that authorizes the subject activity.

Sections 30.51(d) and (f) requires that the licensee transfer disposal records, survey records and other records important to decommissioning to the NRC prior to license termination.

Records are necessary as a primary source for determination that licensees have confined their possession and use of byproduct material to the locations and purposes authorized in the licenses and have not violated or failed to observe any of the terms and provisions of the Atomic Energy Act or any regulation or order of the Commission. Records of receipt can demonstrate that the licensee has received byproduct material of the element and mass number and in the chemical and/or physical form specified in the license. Records of transfer can demonstrate that the licensee has transferred byproduct material of the type, form, and quantity that transferees are authorized to receive. Records of disposal can demonstrate that the licensee has obtained approval of disposal procedures and/or has disposed of byproduct material in accordance with NRC regulations. Records of receipt, transfer, and disposal, taken together, can demonstrate that the licensee has possessed at any one time no more than the maximum quantity of byproduct material authorized in the license. The retention periods provide reasonable assurance that records will be available for Commission inspection after the recorded event.

Section 30.55(c) requires that each person who is authorized to possess tritium shall report promptly to the appropriate NRC regional office any incident in which any attempt has been made or is believed to have been made to commit a theft or unlawful diversion of more than 10 curies of such material at any one time or 100 curies of such material in any one calendar year. The initial report shall be followed within 15 days by a written report which contains the details of the incident, its consequences, and any substantive additional information.

The information submitted by licensees under this requirement is used by the regional office to determine whether there has been a diversion or other loss of material and to initiate prompt action in the event of such diversion or loss. The written reports submitted to NRC regional offices are duplicate copies of reports filed with the Federal Bureau of Investigation on the theft or unlawful diversion of tritium.

Appendix A establishes criteria for parent companies to pass the financial test and to obtain a parent company financial guarantee. It specifies various financial ratios, including net worth and asset/liability ratios, and bond ratings. It requires that the licensee notify the NRC within 90 days of any matters coming to the attention of the independent auditor which cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test. If the parent company no longer meets the financial test requirements, the licensee must send notice to NRC of intent to establish alternate financial assurance as specified in the Commission's regulations. The notice must be sent within 90 days after the end of the fiscal year for which year-end financial data show that the company no longer meets the financial test requirements. The notice is necessary to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site.

Appendix C establishes criteria for companies to pass the financial test and to obtain a self guarantee for financial assurance. It specifies various financial ratios, including net worth ratios, and bond ratings. It requires that the licensee notify the NRC within 90 days of any matters coming to the attention of the independent auditor which cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test. If the company no longer meets the financial test requirements, the licensee must send immediate notice to NRC of intent to establish alternate financial assurance as specified in the Commission's regulations within 120 days. If at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys, the licensee must notify NRC within 20 days. The notice is necessary to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site.

Appendix D establishes criteria for companies with no outstanding rated bonds to pass the financial test when they furnish their own guarantee that funds will be available for decommissioning cost. It specifies net tangible worth, assets, ratios of cash flow and ratios of these to the total current decommissioning cost estimates. It requires that the licensee notify the NRC within 90 days of any matters coming to the attention of the independent auditor which cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test. If the company no longer meets the financial test requirements, the licensee must notify the NRC within 90 days of intent to establish alternate financial assurance as specified in the Commission's regulations within 120 days. The notice is necessary to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site.

Appendix E establishes criteria for nonprofit colleges, universities and hospitals to pass the financial test when they furnish their own guarantee that funds will be available to cover the decommissioning cost. It specifies bonds, unrestricted endowment, total revenue ratios, current assets, operating revenues and various other financial ratios. It requires that the licensee notify the NRC within 90 days of any matters coming to the attention of the independent auditor which cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test. If the company no longer meets the financial test requirements, the licensee must send notice within 90 days to NRC of intent to establish alternate financial assurance as specified in the Commission's regulations within 120 days. If at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys, the licensee must notify NRC within 20 days. The notices are necessary to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site.

## 2. Agency Use of the Information

The records that 10 CFR Part 30 requires the licensees to maintain are reviewed during inspections, license renewals, and license amendment reviews to evaluate compliance with NRC radiation safety requirements for possession and use of byproduct material.

The records of receipt, transfer, and disposal of byproduct material are reviewed by the NRC inspectors to determine that licensees have confined their possession and use of byproduct material to the locations, purposes, receipt, and quantities authorized in their licenses.

Reports of significant safety events and theft of radioactive material are used by the agency in evaluating the protective actions required to avoid exposures to radiation or releases of radioactive materials that could exceed regulatory limits and, therefore, impact public health and safety, the common defense and security, and the environment.

Bankruptcy reports, decommissioning plans, decommissioning funding plans, and certifications of financial assurance for decommissioning are reviewed by the NRC to ensure that a licensee has adequate procedures and funds for any necessary clean-up efforts before a licensee's responsibility for byproduct materials is terminated and the site is released for unrestricted use.

## 3. Reduction of Burden through Information Technology

There are no legal obstacles to reducing the burden associated with this information collection. The NRC encourages respondents to use information technology when it would be beneficial to them. NRC issued a regulation on October 10, 2003 (68 FR 58791), consistent with the Government Paperwork Elimination Act, which allows its licensees, vendors, applicants, and members of the public the option to make submissions electronically via CD-ROM, e-mail,

special Web-based interface, or other means. However, the applications and reports do not lend themselves readily to the use of automated information technology for submission because of the varied types of information and the infrequency of submission. Consequently, the current percentage of electronic submissions is zero.

4. Effort to Identify Duplication and Use Similar Information

In general, information required by NRC in applications, reports, or records concerning the transfer, receipt, possession, or use of byproduct material does not duplicate other Federal information collection requirements and is not available from any source other than applicants or licensees. NRC has in place an on-going program to examine all information collections with the goal of eliminating all duplication and/or unnecessary information collections. The collection of this information by use of specified forms and other required reports and records is the most effective and least burdensome means of obtaining the information.

There is no similar information available to the NRC that can be used to evaluate compliance with NRC requirements governing the domestic licensing of byproduct material; to ensure public health and safety from NRC-licensed activities; and to identify trends and events that must be corrected to ensure continued safe practices.

5. Effort to Reduce Small Business Burden

The majority of licensees who use byproduct material are small businesses. Since the health and safety consequences of improper handling or use of radioactive byproduct material are the same for large and small entities, it is not possible to reduce the burden on small businesses by less frequent or less complete reporting, recordkeeping, or accounting and control procedures.

6. Consequences to Federal Program or Policy Activities if the Collection Is Not Conducted or Is Conducted Less Frequently

If the information is not collected, NRC will have no way to assess whether this category of licensee is operating within the radiation safety requirements applicable to the possession, use, or transfer of byproduct material.

The required reports are collected and evaluated on a continuing basis as events occur. Applications for new licenses and amendments are submitted only once. Applications for renewal of licenses are usually submitted every 10 years. Information submitted in previous applications may be referenced without being resubmitted. The schedule for collecting the information is the minimum frequency necessary to assure that licensees will continue to conduct programs in a manner that will assure adequate protection of public health and safety.

7. Circumstances Which Justify Variation from OMB Guidelines

Contrary to the Office of Management and Budget Guidelines (OMB) in 5 CFR 1320.6(b), NRC requires some information to be submitted in less than 30 days:

- Section 30.9(b) requires that licensees submit a notification to NRC in less than 30 days from the date of identifying information having significant implications for the public health and safety or the common defense and security and which is not covered by other reporting requirements. The requirement to provide notification within 2 working days following the identification of the information is necessary to ensure that NRC is made aware of the significant safety information so as to take prompt action to protect the public health and safety.
- Section 30.34(h) requires that licensees submit a notification to NRC in less than 30 days from the date of filing of a petition for bankruptcy. The requirement to provide notification promptly following the filing of the petition is necessary to ensure that NRC is made aware of the bankruptcy so as to take effective action to protect the public health and safety. Allowing a period of 30 or more days to elapse might preclude NRC from becoming aware of the licensee's distressed financial circumstances in time to prevent the development or aggravation of a potential hazard to the public. Moreover, the United States Code contains requirements regarding notification of creditors in bankruptcy. Section 30.34(h) would require one additional notification. Notifying NRC promptly after the filing of the petition would in fact be less of a burden on the bankrupt licensee than a separate notification later in the proceedings.
- Section 30.50 requires licensees to notify NRC immediately (i.e., within 4 hours) by telephone of events or conditions that threaten the health and safety of individuals using licensed material or that prevent the performance of surveys or other safety-related duties necessary to maintain control over licensed material. It is important that the NRC be notified in such cases because accidental contamination events increase radiation exposure and the risk of ingesting radioactive material. Immediate notification is needed so that such events may be promptly evaluated and measures taken to minimize any spread of contamination and determine the performance of features designed to control licensed material.
- Section 30.55(c) requires that each person who is authorized to possess tritium shall report promptly to the appropriate NRC regional office, by telephone and telegraph, mailgram, or facsimile, any incident in which any attempt has been made or is believed to have been made to commit a theft or unlawful diversion of more than 10 curies of such material at any one time or 100 curies of such material in any one calendar year. The initial report must be followed within 15 days by a written report setting forth the details of the incident and its consequences. Receipt of these reports in less than 30 days is necessary to permit the regional office to determine whether there has been a diversion or other loss of material and to initiate prompt action in the event of such diversion or loss. The written reports submitted to NRC regional offices which set forth the details of the incident, its consequences, and any

substantive additional information are duplicate copies of reports filed with the Federal Bureau of Investigation on the theft or unlawful diversion of tritium.

- Appendix C requires licensees to notify NRC immediately, (i.e., within 4 hours) if the company no longer meets the financial test requirements, of its intent to establish alternate financial assurance as specified in the Commission's regulations within 120 days. It is important that the NRC be notified immediately in such cases to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site so that the decommissioning will be carried out in a manner which protects public health and safety.
- Appendix C requires licensees to notify NRC within 20 days if at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys. It is important that the NRC be notified promptly in such cases to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site so that the decommissioning will be carried out in a manner which protects public health and safety.
- Appendix E requires licensees to notify NRC within 20 days if at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys. It is important that the NRC be notified promptly in such cases to permit NRC to take action to ensure that alternative means of financial assurance are available for decommissioning the licensee's site so that the decommissioning will be carried out in a manner which protects public health and safety.

Contrary to the Office of Management and Budget Guidelines (OMB) in 5 CFR 1320.5(d)(2), NRC requires some records to be maintained for longer than 3 years:

- Condition 164 requires that records of inventories be maintained for 5 years from the date of each inventory so that they will be available for review during inspections for materials accountability.
- Condition 165(i) requires that licensees maintain records of leak tests results for 5 years so that they will be available for review during inspections to demonstrate compliance with NRC radiation safety requirements.
- Section 30.35(g) requires that licensees keep records important to the safe and effective decommissioning of the facility until the site is released for unrestricted use. It is necessary that the records be retained longer than 3 years so that the Commission may determine whether an applicant will be able to carry out the requirements of Section 30.36 which specify that licensed premises must be decontaminated to a level "suitable for release for unrestricted use" before the license may be terminated. NRC reviews the information to ensure that adequate funds will be available to ensure that the applicant will conduct decontamination efforts in a timely manner and minimize exposure of workers to radioactive materials. The information is also used to

ensure that the decontamination efforts will reduce the residual radioactive contamination sufficiently to protect the public health and safety after the site is released for unrestricted use.

- Section 30.51(a) requires retention of records of receipt of byproduct material as long as the material is possessed and for 3 years following transfer or disposal, provides a 3-year retention period for records of transfer of byproduct material, and provides that records of disposal of licensed material must be maintained until the Commission terminates the license. Section 30.51(b) requires that records which are required by the regulations in 10 CFR Parts 30-36 and 39, or by license conditions, must be maintained for the period specified by the appropriate regulation or license condition. In any case in which a retention period is not specified, the records must be maintained until the Commission authorizes their disposition.

These records are necessary as a primary source for determination that licensees have confined their possession and use of byproduct material to the locations and purposes authorized in the licenses and have not violated or failed to observe any of the terms and provisions of the Atomic Energy Act or any regulation or order of the Commission. Records of receipt can demonstrate that the licensee has received byproduct material of the element and mass number and in the chemical and/or physical form specified in the license. Records of transfer can demonstrate that the licensee has transferred byproduct material of the type, form, and quantity that transferees are authorized to receive. Records of disposal can demonstrate that the licensee has obtained approval of disposal procedures and/or has disposed of byproduct material in accordance with NRC regulations. Records of receipt, transfer, and disposal, taken together, can demonstrate that the licensee has possessed at any one time, no more than the maximum quantity of byproduct material authorized in the license. Retention for longer than 3 years, where required, is necessary to provide reasonable assurance that records will be available for Commission inspection after the recorded event.

8. Consultations Outside the NRC

The opportunity for public comment on the information collection requirements was published in the Federal Register on December 10, 2008 (73 FR 75142). No comments were received.

9. Payment or Gift to Respondents

Not applicable.

10. Confidentiality of the Information

Reports submitted are generally subject to public disclosure in accordance with 10 CFR 2.790 and 10 CFR Part 9. Confidential and proprietary information is protected in accordance with NRC regulations at 10 CFR 9.17(a) and 10 CFR 2.390(b).

However, no information normally considered confidential or proprietary is requested.

11. Justification for Sensitive Questions

This information collection does not involve sensitive questions.

12. Estimated Burden and Burden Hour Cost

The estimates are based on submittals to NRC in past years. The cost to licensees and applicants is calculated at a rate of \$238 per hour for professional staff for the technical reports and records prepared in response to the 10 CFR Part 30 information collection requirements. This rate is based on NRC's fully recoverable fee rate. The recordkeeping requirements in Sections 30.41(c) and (d), and 30.51 are calculated at a rate of \$47 per hour, because these requirements can be fulfilled using automated equipment, computer-generated reports and administrative/clerical staff.

The number of NRC licensees is known, whereas the total number of Agreement State licensees is an estimate based on NRC's best information available from the Agreement States. NRC uses the ratio of the total of NRC licensees (subject to Part 30) to the total number Agreement State licensees to estimate the number of Agreement State respondents for each section. NRC uses this ratio approach as the total number of Agreement State licensees subject to various Part 30 Sections is not known exactly and, therefore, must be estimated.

NRC Licensees:

The total annual burden is estimated to be about 54,250 hours per year for the 3,869, licensees covered by 10 CFR Part 30 (an approximate 14% reduction in licensees). The details are shown in Tables 1 and 2.

Cost for NRC licensees @ \$47/hour = \$691,323 [14,709 hours (14,362 recordkeeping hours for Sections 30.41(c)&(d) and 30.51+ 347 reporting hours for Sections 30.51(d)&(f)].

Cost for NRC licensees @ \$238/hour = \$9,410,758 [39,541 hours (15,255 recordkeeping hours + 24,286 reporting hours).

The total burden for NRC licensees is 54,250 hours (29,617 hours for recordkeeping and 24,633 hours for reporting) at a cost of \$10,102,081.

Agreement State Licensees:

Based on ratios discussed above, the total annual burden is estimated to be 4.8 times that of NRC licensees or 260,594 hours per year for the approximately 18,571 Agreement State licensees (an approximate 14% increase in licensees). The details are shown in Tables 3 and 4.

Cost for the Agreement State licensees @ \$47/hour = \$3,318,153 [70,599 hours (68,935 recordkeeping hours for Sections 30.41(c)&(d) and 30.51 + 1,664 reporting hours for Sections 30.51(d)& (f)].

Cost for the Agreement State licensees @ \$238/hour = \$45,218,810 [189,995 hours (73,062 recordkeeping hours + 116,933 reporting hours)].

The total burden for Agreement State licensees is 260,594 hours (141,997 hours for recordkeeping and 118,597 hours for reporting) at a cost of \$48,536,963.

The total Part 30 annual burden is 314,844 hours [171,614 recordkeeping hours + 143,230 reporting hours] for a total cost of \$58,347,691.

13. Estimate of Other Additional Costs

NRC has determined that the records storage cost is roughly proportional to the recordkeeping burden cost. Based on a typical clearance, the records storage cost has been determined to be equal to 0.04 percent of the recordkeeping burden cost. Therefore, the records storage cost for this clearance is \$16,338 (171,614 recordkeeping hours x \$238 x 0.0004).

14. Estimated Annualized Cost to the Federal Government

The annual cost for the NRC to review the records and reports required by 10 CFR Part 30 is estimated to be 8,108 hours x \$238/hour, or \$1,929,704. This cost can be broken down into: 6274 hours, or \$1,493,212, for review of the reports submitted to NRC; and 1,834 hours, or \$436,492, for review of the records during inspections. Additionally, the cost for review of reports associated with review of the decommissioning funding plans and decommissioning plans account for 4,568 hours, or \$1,087,184. In addition, technical assistance contracts for review of these plans are estimated at \$120,812. Therefore, the total estimated annualized cost to the Federal government for the 10 CFR Part 30 information collection requirements is approximately \$3,137,700. Application review activities for 10 CFR Part 30 licensees are attributed to and reported under OMB Clearance No. 3150-0120 for NRC Form 313. The burden of certifying the disposition of all licensed material, including accumulated wastes, required for termination of 10 CFR Part 30 licenses is reported under OMB Clearance No. 3150-0028 for NRC Form 314. These costs are fully recovered through fee assessments to NRC licensees pursuant to 10 CFR Parts 170 and/or 171.

15. Reasons for Changes in Burden or Cost

The overall burden has increased by 33,053 hours from 281,791 hours to 314,844 hours.

Based on NRC's estimates, the total number of licensees has increased from 20,631 to 22,440 (increase of 1,809 licensees). There was a reduction in the number of NRC licensees, which decreased from 4,485 to 3,869, in part as a result of Minnesota and Pennsylvania becoming Agreement States. Some decrease may also be due to NRC licensees terminating their licenses.

The ratio used to estimate Agreement State respondents changed from 3.6 to 4.8; therefore, the number of Agreement State licensees increased from 16,000 to 18,571. The ratio changed because the difference in the number of NRC licensees versus Agreement States licensees has increased (Minnesota and Pennsylvania became Agreement States).

The increase in the number of licensees is tied to a corresponding increase in the number of expected responses for various sections, resulting in an overall increase in the burden hour estimate.

Another reason for the increase is an adjustment in the estimate for 30.35(a) and (b) (certification and funding plan). The previous estimate developed for these sections was 100 hours and 300 hours, respectively. The NARM rule estimated 10 hours for each section for an additional 5 NRC licensees and 20 Agreement States. In this renewal, NRC has adjusted our estimate for 30.35(a) and (b) to reflect the correct estimate of 100 hours and 300 hours respectively for all licensees.

There was a change in the overall cost because the hourly rate increased from \$197 to \$238.

16. Publication for Statistical Use

There is no application to statistics in the information collected. There are no plans for publication of this information.

17. Reason for Not Displaying the Expiration Date

The requirements are contained in a regulation. Amending the Code of Federal Regulations to display information that, in an annual publication, could become obsolete would be unduly burdensome and too difficult to keep current.

18. Exceptions to the Certification Statement

There are no exceptions.

B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS

Not applicable.

Table 1. Part 30 Reporting Burden for NRC Licensees<sup>1</sup>
