Released May 29, 2009, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, U.S. Department of Agriculture. For information on *Agricultural Prices* see page 47, office hours 7:30 a.m. to 4:00 p.m. ET.

May Farm Prices Received Index Increased 2 Points From Last Month

The preliminary All Farm Products Index of Prices Received by Farmers in May, at 131 percent, based on 1990-92=100, increased 2 points (1.6 percent) from April. The Crop Index is up 2 points (1.3 percent) but the Livestock Index was unchanged. Producers received higher prices for broilers, soybeans, corn, and onions and lower prices for eggs, lettuce, tomatoes, and milk. In addition to prices, the overall index is also affected by the seasonal change based on a 3-year average mix of commodities producers sell. Increased monthly marketings of sweet corn, broilers, grapes, and cantaloups offset decreased marketings of cattle, milk, corn, and apples.

The preliminary All Farm Products Index is down 21 points (14 percent) from May 2008. The Food Commodities Index, at 128, increased 1 point (0.8 percent) from last month but decreased 20 points (14 percent) from May 2008.

Prices Paid Index Down 1 Point

The May Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) is 176 percent of the 1990-92 average. The index is down 1 point (0.6 percent) from April and 8 points (4.3 percent) below May 2008. Lower prices in May for potash & phosphate, feeder pigs, mixed fertilizer, and complete feeds more than offset higher prices for nitrogen, feed grains, gasoline, and LP gas.

¹ Beginning in March 2009, Utah was added and Kentucky removed from the monthly milk price program. The U.S. prices and fat test percents for fluid and all milk include Utah and exclude Kentucky beginning in January 2008.

² Entire month.

³ Including milk diverted to manufacturing.

⁴ IN no longer published due to insufficient manufacturing grade milk volume.

⁵ Before deductions for hauling. Includes quality, quantity, and other premiums. Excludes hauling subsidies.

⁶ Preliminary.

⁷ Animals sold for dairy herd replacement only. Prices published January, April, July and October.

Reliability of Prices Received Estimates

Definition: Prices received represent sales from producers to first buyers. They include all grades and qualities. The average commodity price from the survey multiplied by the total quantity marketed theoretically should give the total cash receipts for the commodity.

Survey Procedures: Primary sales data used to determine grain prices were obtained from probability samples of about 2000 mills and elevators. These procedures ensure that virtually all grain moving into commercial channels has a chance of being included in the survey. Generally, States surveyed account for 90 percent or more of total U.S. production. Livestock prices are obtained from packers, stockyards, auctions, dealers, and market check data from AMS-USDA, private marketing organizations, and state commodity groups and agencies. Inter-farm sales of grain and livestock are not included since they represent very small percentages of the total marketings. Grain marketed for seed is also excluded. Fruit and vegetable prices are obtained from sample surveys and market check data from AMS-USDA, private marketing organizations, state agencies, and universities.

Summary and Estimation Procedures: Survey quantities sold are expanded by strata to state levels and used to weight average strata prices to a state average. State prices are then weighted to a U.S. price based on expanded marketings. Recommendations are prepared by the State Field Offices and reviewed by the Agricultural Statistics Board in Washington, D.C. State recommendations are reviewed for reasonableness with survey data, other States, and recent historic estimates.

Revisions: For most items, the current month's preliminary price represents a 3-5 day period around the 15th of the month. Previous month's prices represent actual dollars received for quantities sold during the entire month. Revisions are published in monthly issues of Agricultural Prices.

Reliability: U.S. price estimates based on probability surveys generally have a sampling error of less than one percent for the major commodities such as corn, wheat, soybeans, cotton, and rice. Current methods of summarization for non-probability commodities are not designed directly to calculate sampling errors. However, analytical measures approximate the U.S. relative sampling errors at around five percent. Any nonsampling errors are attributed to such things as the inability to obtain correct information, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts are made at each step in the survey process to minimize these nonsampling errors.

Prices Paid by Farmers

The May Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) at 176 (1990-92=100), is down 0.6 percent from April 2009 and 4.3 percent from May 2008.

PRODUCTION INDEX: The May index, at 178, decreased 0.6 percent from last month and 6.8 percent from last year. Lower prices in May for potash & phosphate, feeder pigs, mixed fertilizer, and complete feeds more than offset higher prices for nitrogen, feed grains, gasoline, and LP gas.

Feed: The May index, at 185, increased 0.5 percent from April but decreased 7.0 percent from last May. Since April, higher prices for feed grains, concentrates, hay & forages, and feed supplements more than offset lower prices for complete feeds.

Livestock & Poultry: The May index, at 119, decreased 2.5 percent from last month and 6.3 percent from last year. Since April, lower prices for feeder pigs more than offset higher prices for feeder cattle. The May feeder cattle price, at \$99.00 per cwt, is up \$0.40 from the April price. May feeder pigs averaged \$106.00 per cwt, down \$41.00 from April.

Fertilizer: The May index, at 282, is down 5.4 percent from April and 23 percent below May a year ago. Since April, lower prices for potash & phosphate and mixed fertilizer more than offset higher prices for nitrogen.

Chemicals: The May index, at 151, is unchanged from April but increased 11 percent from last May. Since April, prices are higher for herbicides, insecticides, and fungicides/other.

Fuels: The May index, at 204, is up 2.0 percent from a month earlier but 49 percent below May 2008. Compared with last month, prices are higher for gasoline, LP gas, and diesel.

Machinery: The May index, at 220, is unchanged from April but increased 6.3 percent from last May. Since April, prices are higher for self-propelled machinery but lower for tractors.

CONSUMER PRICE INDEX: The April 2009 Consumer Price Index, as issued by the Bureau of Labor Statistics, for all urban consumers (CPI-U) increased 0.2 percent before seasonal adjustment to a level of 213.240 (1982-84=100). This compares with the March index of 212.709. For the 12-month period ending in April, the overall index decreased 0.7 percent.

¹ Effective January 1995, prices of commercial prepared feeds are based on current U.S. prices received for corn, soybeans, alfalfa hay, and all wheat.

² Simple average of monthly ratios, January through December.

³ The price of commercial prepared broiler feed is based on current U.S. prices received for corn and soybeans. The modeled feed uses 58 percent corn and 42 percent soybeans.

⁴ The price of commercial prepared layer feed is based on current U.S. prices received for corn and soybeans. The modeled feed uses 75 percent corn and 25 percent soybeans.

⁵ The price of commercial prepared turkey feed is based on current U.S. prices received for corn, soybeans, and wheat. The modeled feed used 51 percent corn, 28 percent soybeans, and 21 percent wheat.

⁶ The price of commercial prepared dairy feed is based on current U.S. prices received for corn, soybeans, and alfalfa. The modeled feed uses 51 percent corn, 8 percent soybeans, and 41 percent alfalfa.

⁷ Number of bushels of corn equal in value to 100 pounds of All Hogs, live weight.

⁸ Number of bushels of corn equal in value to 100 pounds of Steers & Heifers, live weight.

Reliability of Prices Paid Estimates

Definition: Prices paid by farmers represent the average costs of inputs purchased by farmers and ranchers to produce agricultural commodities. Conceptually, the average price when multiplied by quantity purchased should equal total producer expenditures for the item.

Survey Procedures: The prices paid data are obtained from establishments that sell goods and services to farmers and ranchers. Annually, about 8,500 firms are randomly selected from lists by type of item sold with an average response rate in the range of 75-80 percent. Firms are asked to report the price for the specified item "most commonly bought by farmers" or that was the "volume seller". Approximately 135 items are surveyed each March to represent all production input items purchased. The survey reference period for most items is the 5 business days centered around the 15th of the month. Separate prices paid surveys are conducted for agricultural chemicals, fuels, feed, fertilizer, machinery, and seed.

Summary and Estimation Procedures: The annual March Prices Paid Survey is summarized as a nonprobability survey. Average prices reported are aggregated to the region and U.S. level using weights available from expenditure data and other administrative sources. Price recommendations are prepared by the State Field Offices and Headquarters for review by the Agricultural Statistics Board in Washington, D.C. Also, the change in price level for individual items surveyed are combined to the regional and U.S. levels, and are published as prices paid indexes referenced to a specific base period. Prices paid indexes for new autos and trucks, building materials, farm supplies, motor supplies, and marketing containers are updated based on price changes measured in selected Bureau of Labor Statistics (BLS) indexes.

Revisions: Any revisions are published in the monthly and in annual issues of Agricultural Prices. The basis for revision must be supported by additional data that directly affect the level of the estimate. More revisions are likely for March when separate prices paid surveys are conducted, in lieu of BLS indexes, by the USDA to measure price change.

Reliability: Current methods of summarization for the March data are not designed directly to calculate sampling errors. However, analytical measures approximate the U.S. relative sampling errors for major items around 10 percent. Any nonsampling errors are attributed to such things as the inability to obtain correct information, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts are made at each step in the survey process to minimize these nonsampling errors.

Program Change: Effective January 1, 1995, the National Agricultural Statistics Service updated the weights and changed the construction of its prices paid and received by farmers indexes. A Federal Register Notice dated October 28, 1994 discussed these program modifications.

A 1990-92 reference and base period replaced the 1977 reference and 1971-73 base weight period. Five-year moving average weights replaced the current fixed 1971-73 base period weights. The 1910-14=100 price indexes, required by statute for computing parity prices, were linked forward based on the changes in the new 1990-92=100 indexes. The new indexes were constructed by multiplying the ratios of the current prices to the base period prices by the moving average weights (adjusted for seasonal marketing patterns for the prices received indexes).
