Proposed Project

Cost and Follow-up Assessment of Administration on Aging (AoA)—Funded Fall Prevention Programs for Older Adults—New—National Center for Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

NCIPC seeks to examine cost of implementing each of the three AoA-funded fall prevention programs for older adults (Stepping On, Moving for Better Balance and Matter of Balance) and to assess the maintenance of fall prevention behaviors among participants six months after completing the Matter of Balance program.

To assess the maintenance of fall prevention behaviors, CDC will conduct telephone interviews of 300 Matter of Balance program participants six months after they have completed the program. The interview will assess their knowledge and self-efficacy related to

falls as taught in the course, their activity and exercise levels, and their reported falls both before and after the program. The results of the follow-up assessment will determine the extent to which preventive behaviors learned during the Matter of Balance program are maintained and can continue to reduce fall risk.

The cost assessment will calculate the lifecycle cost of the Stepping On, Moving for Better Balance, and Matter of Balance programs. It will also include calculating the investment costs required to implement each program, as well as the ongoing operational costs associated with each program. These costs will be allocated over a defined period of time, depending on the average or standard amount of time these programs continue to operate (standard lifecycle analysis ranges from five to 10 years). As part of the lifecycle cost calculation, these data will allow us to compare program costs and to identify specific cost drivers, cost risks, and unique financial attributes of each program.

Local program coordinators for the 200 sites in each of the AoA-funded states will collect the cost data using lifecycle cost spreadsheets that will be returned to CDC for analysis.

The results of these studies will support the replication and dissemination of these fall prevention programs and enable them to reach more older adults.

There are no costs to respondents other than their time.
