

On July 1, 2008 OMB approved ICR 2286.01 and assigned it OMB Control number 2060-0616.

The approval covered only the first component, the survey portion of the ICR. After receiving facility-specific information under the first component of the ICR via the survey, OMB requested that EPA submit its sampling plan for the second component, the emissions testing, and a revised Part B to OMB. OMB gave permission that EPA could resubmit this sampling plan and revised Part B under this OMB Control Number without additional Federal Register notices.
