Pacific States Marine Fisheries Commission
205 SE Spokane St, Suite 100
Portland, OR 97202

Dear Mr. Charles Smith

We would like to invite you to participate in a cost earnings survey of commercial fishing vessel owners being conducted by the Pacific States Marine Fisheries Commission in cooperation with the National Marine Fisheries Service. This survey targets vessel owners who hold a federal limited entry groundfish permit with a fixed gear endorsement. This survey updates a similar survey conducted during 2009. Our goal is to support fisheries management decision-making and to generate information that is required to help meet legal and regulatory requirements.

You can respond to this voluntary survey by; 1) completing the questionnaire and returning it in the enclosed self-addressed stamped envelope, 2) answering the questionnaire on-line by following the enclosed instructions for on-line response, or 3) meet with an in-person interviewer to complete the questionnaire. A representative of Gilmore Research, a private market research firm hired by the National Marine Fisheries Service and Pacific States Marine Fisheries Commission, will begin attempting to contact you by phone about ten days after the mailing of this letter. The Gilmore Research representative will be able to answer any questions you may have about the various response options, and help you determine which option works best for you.

We appreciate the confidential nature of the data being collected by this survey. When publishing survey results, we will combine your responses with information provided by other participants, and report it in summary form so that responses for any individual vessel cannot be identified. If a Freedom of Information Act (FOIA) request is received for the data collected by this survey, we will seek to protect the confidentiality of the survey responses under Exemption 4 of the FOIA.

Because you and other vessel owners are the only ones that can provide this information, we encourage you to participate in this survey. By collecting information on individual vessels, we can better understand average fleet characteristics as well as diversity within the fleet. Fisheries managers will be better able to consider the effect of regulations.

Thank you for your consideration.

Sincerely,

Carl Lian
