

OMB No. 0920-0666
National Healthcare Safety Network (NHSN)
Justification for Change

CDC is requesting OMB approval to add a Hemovigilance module to OMB Control No. 0920-0666: National Healthcare Safety Network (NHSN). This module is a response to a recommendation from HHS' Advisory Committee on Blood Safety and Availability (ACBSA) to develop a national system for outcome surveillance that includes recipients of blood and blood products. This information collection request is currently approved for 6,000 respondents and 5,140,345 burden hours. CDC is requesting approval to add 32,200 burden hours for this information collection, for a total of 5,172,545 burden hours. There are no additional respondents for this request as they are already part of the respondent population.
