I. Supplementary Information

Abstract: Respondents supply the U.S. Geological Survey with domestic production, exploration, and mine development data for nonfuel mineral commodities. The data obtained from this canvass are used by Government agencies, Congressional offices, educational institutions, research organizations, financial institutions, consulting firms, industry, and the

public. They provide essential mining, exploration, and development information to make domestic ore resource analyses. Tabulations of volumetric data concerning domestic mining operations' use of land can be used to compare the total volume of earth disturbed with the actual crude ore mined and the resulting marketable product. These data are an indicator of the future mining outlook. This information will be published as an Annual Report for use by Government agencies, industry, academia, and the general public.
