725 17th Street, N.W.
Washington, DC 20503

Dear Dr. Schwab:

The staff of the NCHS Questionnaire Design Research Laboratory (QDRL) (OMB No. 0920-0222, exp. 03/31/2013) plans to conduct research to evaluate the Respiratory Health of Healthcare Workers Questionnaire for CDC's National Institute of Occupational Safety and Health (NIOSH).

We propose to start advertising for volunteer participants as soon as we receive clearance and to start testing as soon as possible after that.

Background Information about Cognitive Testing of Questionnaires

The methodological design of this proposed study is consistent with the design of typical cognitive testing research. As you know, the purpose of cognitive testing is to obtain information about the processes people use to answer survey questions as well as to identify any potential problems in the questions. The analysis will be qualitative.

Proposed project: Respiratory Health of Healthcare Workers Questionnaire Evaluation Study

Healthcare is the largest industry in the United States and performs a vital function in society. Evidence from research indicates that healthcare workers have an elevated risk for work-related asthma. In response to this problem, NIOSH began the project "Research to Inform Prevention of Asthma in Health Care." The primary objective is to identify modifiable occupational risk factors for asthma in healthcare that will inform strategies for prevention.

The Respiratory Health of Healthcare Workers Questionnaire that we are evaluating appears as Attachment 1. The testing procedure will conform to the cognitive interviewing techniques that have been described in our generic OMB clearance package.

As many as twenty-five 60-minute cognitive interviews may be conducted with nurses (registered nurses (RN), licensed practical nurses and licensed vocational nurses (LPN/LVN)), Nursing Aides or certified Nursing aides, Housekeepers, Janitors or cleaners, respiratory therapists or respiratory technicians or technologists who are currently employed at a hospital or nursing home, and who may or may not belong to the Service Employees International Union (SEIU).

We plan to recruit respondents through advertisements/flyers, a flyer through the SEIU, and word of mouth. Individuals will be told that their participation in the study is entirely voluntary. The advertisement/flyer is shown in Attachment 2.

At NIOSH's request, the SEIU will inform its Washington, DC area members that the National Center for Health Statistics' Questionnaire Design Research Laboratory (QDRL) in Hyattsville, Maryland will be conducting research evaluating survey questions on respiratory health of healthcare workers through one hour one-on-one interviews in December and individuals interested in participating in the study should call the number provided on the flyer (Attachment 2).

Cognitive interviews will be conducted by QDRL staff members either in the QDRL, or in a private room of a hospital facility, nursing home or mutually agreeable location. With the consent of the participants, the interviews will be recorded on videotape or audiotape. Participants will be informed of taping procedures (including observation if applicable) in the process of reviewing the consent forms, and the equipment will be turned on once it is clear that the procedures are understood and agreed upon.

Individuals participating in the cognitive interview will be paid \$50.00 for their participation. Since the recruitment of respondents for this study is specialized, (i.e., nurses (registered nurses (RN), licensed practical nurses and licensed vocational nurses (LPN/LVN); Nursing Aides or certified Nursing aides; Housekeepers, Janitors or cleaners; Respiratory therapists or respiratory technicians or technologists who are currently employed, working in a hospital or nursing home) the incentive has been slightly increased over and above our normal \$40 incentive to increase participation, reduce the number of cancelations, and maximize time and travel in a particular state/location.

At the end of the interviews, participants will be paid and provided with copies of all papers they signed.

Extreme care will be taken with all tapes and paperwork from the interviews conducted off-site. Tapes and identifying paperwork will be stored in a secured travel case until returned to NCHS, at which point they will be transferred to the usual secured locked storage cabinets.

In total, for this project, the maximum respondent burden will be 25 hours of interviewing in addition to travel time. An updated burden table for this project is shown below:

Projects	Number of Participants	Number of Responses/ Participant	Average hours per response	Response burden
QDRL Interviews				
2) Other questionnaire testing	25	1	1	25
