

## **Narrative of Revisions**

*The purpose of the Narrative of Revisions is to clearly indicate revisions to a collection since the previous approval*

Collection Title: Characteristics of Liquid Chemicals Proposed for Bulk Water Movement

OMB Control No.: 1625-0007

Current Expiration Date: 09/30/2010

Collection Instruments: Instructions

The following listed below are revisions to the collection:

- There is no change to the reporting or recordkeeping requirements. The change in burden is an adjustment, as detailed below.
- Decrease in respondents and responses due to a decrease in the estimated annual number of submission requests to the Coast Guard.
- Increase in burden due to the Coast Guard revising the burden hour estimate per response. The burden per response was increased from 3 hours to 30 hours per response to reflect the change in complexity/detail of the information provided. The three hour burden estimate had remained unchanged for approximately 20 years. This change in burden per response resulted in an increase in the estimated annual burden. Recent ICR periodic renewal submission may have underestimated the burden.
- The Coast Guard has dropped the reference to form CG-4355, as the document is no longer used.
- The Coast Guard has created printable instructions for this collection of information.
- Updates are provided for cost burden and government cost associated with this collection of information.
