

OMB #: \_\_\_\_\_ Expiration Date: \_\_\_\_

## How To Prepare for Your Appointment

You are scheduled for a home visit on (date of visit) at (time of visit).

Because we may be collecting air, water, and dust samples we would like to ask that before our visit you:

- Do NOT wash bedding or linens for at least a week before the visit.
- Do NOT vacuum, dust, or sweep your floors for at least 3 days before the visit.
- \* Do NOT change any water filters you may have.
- Do NOT do any seasonal cleaning of any wood, pellet, or coal stoves or fireplaces that you may have.

If you use any pesticide products for insects, *please gather the containers for all of the pesticide products you have used in the <u>past 6 months</u>. Our staff would like to look at the labels during the visit.* 

Our data collectors would also like to look at the labels for any **prescription and non-prescription medicines, and any vitamins, minerals, herbals, and other dietary supplements** you have taken <u>since you became pregnant</u>. Please **gather the containers** and have them available during the visit.

Also, if you have any **personal record or calendar** that you keep that would help you to remember the dates of any doctor visits you have had <u>since you became</u> **pregnant**, please have it available so that you can refer to it during the interview.

For a few of the measures, the data collector will need access to your shoulder and upper back area.

## \* If you own one, please wear a sleeveless, loose-fitting shirt.

If you have any further questions about how to prepare for this Study visit, you may contact your Study Center at xxx-xxx.
