## INSTRUCTIONS

The following activity worksheets are to facilitate calculations of Community Rating System (CRS) credit points. They are not used for a community's initial application to the CRS. INITIAL APPLICATIONS FOR THE CRS ARE SUBMITTED USING THE WORKSHEET PAGES IN THE *CRS APPLICATION* (FIA-15A/2007, FEMA Form No. 086-0-23).

These activity worksheets are for internal use by the community for submittal of modifications and recertifications, and for use by the ISO/CRS Specialist during verification and cycle verification of a community's program.

These worksheets are designed to be used in conjunction with the *CRS Coordinator's Manual*. Each section of the worksheets corresponds to a section in the *Coordinator's Manual*. If a section is missing from the worksheets, it is because the *Coordinator's Manual* shows that no data or calculations are required for that section.

It is recommended that these worksheets be photocopied before they are used.

When used for submitting a modification, the Credit Points, Credit Calculation, and Credit Documentation parts of the worksheets should be completed for each activity for which credit is requested. Fill in the blanks with the value for each variable. DO NOT COMPLETE THE VERIFICATION SECTIONS. That is done by the ISO/CRS Specialist during the verification or cycle verification visit.

Each worksheet has a Credit Documentation section. Check the blanks to denote that all of the required documentation is available. In some cases, the documentation must be provided with the modification. In others, checking the appropriate spaces confirms that you will provide the documentation when needed. Please consult the *CRS Coordinator's Manual* if you have questions about which documentation is to be provided with the request for a modification.

ATTACH THE REQUIRED DOCUMENTATION FOR AN ACTIVITY TO THE WORKSHEET FOR THAT ACTIVITY. If the documentation is ordinance language, attach only the necessary page(s) from the ordinance.

MARK THE MARGINS OF THE DOCUMENTATION WITH THE ACRONYM for the element so the ISO/CRS Specialist can identify the basis for the credit. If the document is a certification, it must have an original signature (and seal if required).

Not included in this document are the activity worksheets needed for obtaining credit for management of special flood-related hazards, such as uncertain flow paths, closed basin lakes, ice jams, land subsidence, coastal dunes and beaches, mudflows, coastal erosion, and tsunamis. Those worksheets can be found in the appropriate publications listed in Appendix E of the *CRS Coordinator's Manual* and in Appendix B of the *CRS Application*.

One other worksheet is not part of this document: AW-501 (Repetitive Loss List) is generated separately by the Department of Homeland Security's Federal Emergency Management Agency (FEMA) when needed, and provided to the community.

#### 454 Credit Documentation:

- a. Stormwater Management Regulation (SMR):
- 1. A copy of the ordinance or law language regulating surface water runoff from new developments in the watershed. For SMR credit, the language must require that peak runoff from new developments be no greater than the runoff from the site in its pre-development condition. As an alternative to such a performance standard, the language may be based on criteria designed to produce the same result on a regional basis (e.g., a standard allowable discharge per acre based on a regional study). The margin next to where this appears in the ordinance must be marked "SMR."
    - Ordinance language from other communities within the watershed with the same or similar regulations. The margin next to where this appears in the ordinance must be marked "SMR," OR
    - Written assurance from a county, regional, or state agency that similar standards are in effect in the upstream communities.
    - Development and permit records that demonstrate enforcement.
  - 2. SZ: The ordinance language that includes the types of development regulated to ensure that peak runoff from new developments be no greater than the runoff from the site in its pre-development condition. Include the part of the ordinance that specifies exemptions to this requirement. The margin next to where this appears in the ordinance must be marked "SZ."
    - Ordinance language from other communities within the watershed with the same or similar regulations. The margin next to where this appears in the ordinance must be marked "SZ," OR.
    - Provide written assurance from a county, regional, or state agency that similar standards are in effect in the upstream communities.
  - 3. DS: The ordinance language that includes the design storm(s) used by the community for stormwater management regulation. This is the recurrence interval for the storm(s) that is/are regulated to prevent increased runoff due to development. If credit is based on language that does not include storm recurrence intervals, the community must provide an estimate of the recurrence intervals. The margin next to where this appears in the ordinance must be marked "DS."
    - Ordinance language from upstream communities within the watershed with the same or similar regulations. The margin next to where this appears in the ordinance must be marked "DS." OR
    - Provide written assurance from a county, regional, or state agency that similar standards are in effect in the upstream communities.
  - 4. PUB: The ordinance language that shows that the community has the authority to inspect all private and public stormwater facilities and ensure that they are properly maintained. The margin next to where this appears in the ordinance must be marked "PUB."
    - Ordinance language that requires that all stormwater facilities be dedicated to the community." OR
    - Ordinance language that allows community staff to enter private property to inspect stormwater facilities, AND allows community staff to perform necessary maintenance." OR
    - Ordinance language that requires the owner(s) of private stormwater facilities to have them inspected at least annually by a registered engineer, to perform all maintenance indicated by such inspections, and to submit copies of all inspection reports and maintenance reports to the community.

- \_\_\_ A list or map that shows the locations of all publicly and privately owned stormwater facilities for which the community is requesting PUB credit.
- \_\_\_ Documentation that shows that all public and private stormwater facilities have been inspected at least annually. This documentation should include a standard operating procedure for inspections and records of actual inspections and maintenance. This documentation is similar to, and may be combined with, documentation for channel debris removal (CDR) in Activity 540.

5. Impact adjustment. EITHER

- \_\_\_ If the community uses Option 1, it must document that all of the watershed that affects the community is regulated to the same standard. This is true if there is a regional stormwater management standard applied by all upstream communities, or if the community is entirely on an island, and no other communities on the island drain into the community, or if the community's upstream boundaries exactly match the watershed boundaries. Provide an Impact Adjustment Map that shows the area regulated by the community (usually the community's boundaries) (marked "aSMR") and the boundaries of the watershed that affects the community (marked "aW"). aSMR and aW must be equal. OR
- \_\_\_ If the community uses Option 2, rSMR = 0.25 and no documentation is required. OR
- \_\_\_ If the community uses Option 3, it must provide an Impact Adjustment Map. Provide an Impact Adjustment Map that shows the area regulated by the community (usually the community's boundaries) (marked "aSMR") and the boundaries of the watershed that affects the community (marked "aW"). If areas within the upstream watershed are regulated by other communities, their boundaries must also be marked.

b. Watershed Master Plan (WMP):

1. WMP Prerequisites (one prerequisite is credit for SMR):

- \_\_\_ a. Documentation that the community has adopted a watershed management master plan for one or more of the watersheds that drain into the community. The margin next to where this appears in the documentation must be marked "WMP 1.a."
- \_\_\_ c. The section of the plan that includes regulatory standards to manage future peak flows so that they do not increase over present values. The margin next to where this appears in the documentation must be marked "WMP 1.c."
- \_\_\_ d. The section of the plan that includes regulatory standards to manage runoff from all storms up to and including at least the 25-year event. The margin next to where this appears in the documentation must be marked "WMP 1.c."

2. WMP Credit (Basic credit is provided for meeting the prerequisites):

- \_\_\_ b. Documentation that shows management of peak flows for all storms up to and including the 100-year storm. The margin next to where this appears in the documentation must be marked "WMP 2.b."
- \_\_\_ c. Documentation that shows management of peak flows AND volumes so that they do not exceed present values. The plan must include either regulations that meet these criteria, or must be based on a rainfall/runoff model that achieves these results. The margin next to where this appears in the documentation must be marked "WMP 2.c."

- d. Documentation that shows management of the runoff from all storms up to and including the 5-day event. If a community can demonstrate that an event shorter than five days is the locally appropriate “worst-case” runoff event for stormwater management, it may receive the credit if it uses that event for its regulatory standard. The margin next to where this appears in the documentation must be marked “WMP 2.d.”
  - e. Documentation that the plan identifies existing wetlands or other natural open space areas to be preserved from development to provide natural attenuation, retention, or detention of runoff. The margin next to where this appears in the documentation must be marked “WMP 2.e.”
  - f. Documentation that the plan prohibits development, alteration, or modification of existing natural channels. The margin next to where this appears in the documentation must be marked “WMP 2.f.”
  - g. Documentation that the plan requires that channel improvement projects use natural or “soft” approaches rather than gabions, riprap, concrete, or other “hard” techniques. The margin next to where this appears in the documentation must be marked “WMP 2.g.”
  - h. Documentation that the plan was prepared in coordination with or as a part of the community's floodplain management plan credited under Activity 510. The margin next to where this appears in the documentation must be marked “WMP 2.h.” EITHER
  - The Floodplain Management Plan is mentioned prominently in the stormwater master plan and references in the watershed master plan demonstrate that it is intended to help implement the Floodplain Management Plan. OR
  - Hydrologic output from the watershed master plan is used as input for the Floodplain Management Plan.
3. Impact adjustment. Either:
- If the community uses Option 1, it must document that all of the watershed that affects the community is covered by its watershed master plan(s). This is true if there is a regional stormwater management plan applied by all upstream communities, or if the community is entirely on an island, and no other communities on the island drain into the community, or if the community's upstream boundaries exactly match the watershed boundaries. Provide an Impact Adjustment Map that shows the area covered by the watershed master plan(s) (marked “aWMP”) and the boundaries of the watershed that affects the community (marked “aW”). aWMP and aW must be equal. OR
  - If the community uses Option 2, rWMP = 0.25 and no documentation is required. OR
  - If the community uses Option 3, it must provide an Impact Adjustment Map. Provide an Impact Adjustment map that shows the area covered by the watershed master plan(s) (marked “aWMP”) and the boundaries of the watershed that affects the community (marked “aW”).
- c. Freeboard in B, C, D, and X Zones (FRX):
- A copy of the ordinance or law language that requires elevation of the lowest floor or lowest opening of new buildings. The margin next to where this appears in the documentation must be marked “FRX.”
  - Development and building permit records that demonstrate enforcement.

Public reporting burden for this application is estimated to average 31 hours per response for the application process and 4 hours for annual recertification. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and submitting the application. d. Erosion and sedimentation control regulations (ESC):

- \_\_\_ A copy of the ordinance or law language that requires developers or property owners to use techniques that prevent erosion and soil loss from exposed land. The ordinance(s) or law must designate an office or official responsible for receiving complaints and monitoring compliance and it must include enforcement and abatement provisions. ## REPETITIVE LOSS REQUIREMENTS

### 501 Repetitive Loss List:

- The community has reviewed the repetitive loss list dated \_\_\_\_\_, 200\_\_\_\_, and  
 Attached are updated Repetitive Loss Update Worksheets, AW-501. OR  
 There are no changes to FEMA's repetitive loss list.

As the current CRS Coordinator for \_\_\_\_\_[community name], I have examined the repetitive loss data provided for each of our \_\_\_\_\_[#] assigned repetitive loss properties. For each property in need of update, I have attached an AW-501 that reflects the current and accurate address, the correct NFIP community identification number, and all known mitigation actions with the primary source of funding noted. In addition, to the best of my knowledge and belief, any AW-501 not updated and submitted as part of this application has been checked and is not in need of update at this time.

Signature: \_\_\_\_\_ (Community CRS Coordinator)

### 502 Repetitive Loss Category:

- After updating, the number of properties counted for CRS purposes is:\_\_\_\_ This community is a:  
 Category A community because it has removed all properties from being counted as repetitive loss properties for CRS purposes.  
 Category B community with 1 to 9 properties counted for CRS purposes. OR  
 Category C community with 10 or more properties counted for CRS purposes.

**NOTE:** ALL CATEGORY B AND C REPETITIVE LOSS COMMUNITIES MUST COMPLETE THE FOLLOWING SECTION 503 AND SUBMIT THE ACCOMPANYING DOCUMENTATION. CATEGORY C COMMUNITIES MUST ALSO RECEIVE CREDIT FOR A FLOODPLAIN MANAGEMENT PLAN UNDER ACTIVITY 510 (FLOODPLAIN MANAGEMENT PLANNING). A CATEGORY C COMMUNITY WILL REVERT TO CLASS 10 IF IT FAILS TO SUBMIT A PLAN.

### 503 Repetitive Loss Area Outreach Project:

- a. A description of the causes of the repetitive flooding.  
 b. A map with the repetitive loss areas identified.  
 c. The addresses for all the properties in the repetitive loss areas.  
 d. The number of buildings in the repetitive loss areas is: \_\_\_\_\_ (= bRLA).  
 e. The outreach project sent to all properties in the repetitive loss areas.

### The following will be needed at the annual recertification:

- The outreach project sent to all properties in the repetitive loss areas.

- \_\_\_ If the community did not conduct analyses of all the repetitive loss areas, provide the following:
  - a. The number of buildings in the repetitive loss areas where the analyses have been completed (bAA) \_\_\_\_\_.
  - b. The number of buildings in all of the community’s repetitive loss areas (bRLA) \_\_\_\_\_.

### 514 Credit Documentation:

- \_\_\_ RLAA: The completed CRS activity worksheet (AW-510-4) for each analysis.

### 612 Impact Adjustment:

Credit points for each element are adjusted to reflect the extent of coverage of the flood warning program. Local governments should describe the impact of their flood warning program using one of the following options.

#### Option 1:

The flood threat recognition system, the warning dissemination system, and the flood response tasks COVER THE ENTIRE Special Flood Hazard Area (SFHA). \_\_\_\_ Yes \_\_\_\_ No [*Remember, the area credited by the flood warning program is the area where the warning program can forecast specific flood conditions in the future. This includes areas where flood elevations and arrival times can be forecast. It does not include areas where the National Weather Service or others can only predict flooding "along streams and low areas."*]

#### Option 2:

If the flood threat recognition system, the warning dissemination system, and the flood response tasks COVER LESS THAN THE ENTIRE SFHA, the local government may use a default value of 0.25 for rFTR, rEWD, and rORE. \_\_\_\_ Yes \_\_\_\_ No

#### Option 3:

Where local flood warning programs COVER MORE THAN 25% OF THE STRUCTURES, **BUT NOT ALL OF THE STRUCTURES** in the SFHA, the community may use Option 3. Using this option the impact adjustment ratios for FTR, EWD, and ORE are computed by dividing the number of buildings affected by each element by the total number of buildings in the SFHA (bSF).

$$rFTR = \frac{bFTR}{bSF} = rFTR = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

## 710 COMMUNITY GROWTH ADJUSTMENT

### 712 Growth Adjustment Calculation:

- a. Average Growth Rate:

$$\text{AGR1} = \text{USGR} = \underline{\hspace{2cm}}$$

$$\text{AGR2} = \frac{\text{USGR} \quad + \quad \text{CMGR} \quad}{2} = \underline{\hspace{2cm}}$$

AGR = the larger of the two (AGR1 or AGR2)

If AGR is less than 0.0, then AGR = 0.0

If AGR is greater than 5.0, then AGR = 5.0

AGR = \_\_\_\_\_

- b. Community Growth Adjustment:

$$\text{CGA} = 1 + (0.1 \times \text{AGR} \quad \underline{\hspace{1cm}}):$$

CGA = \_\_\_\_\_

Enter this value on AW-720-1.

### 713 Credit Documentation:

\_\_\_\_ If CMGR is used, documentation that the community growth rate (CMGR) data have been accepted by a state or federal agency for reporting requirements.
