

The USDA National Food Study Consent Form

Your household has been selected randomly to represent others like you in the National Food Study sponsored by the U.S. Department of Agriculture and conducted by Mathematica Policy Research. If you agree to participate, we will ask you to help us collect data for seven days.

We will ask you to:

- Complete three interviews—two in person and one over the telephone
- Save receipts from your food purchases
- Scan food items that you bring into your home during the week
- Keep track of meals and snacks that you get away from home
- Complete three short telephone calls to discuss the foods you acquire during the week

In total, it will take about six to seven hours of your time during the week. After you finish, we will give you \$50. We will also give \$20 to each additional member of your household (over age 5) who reports the foods they get during the week. If you call us to complete three short telephone interviews about the foods you get during the week you will get a \$25 telephone bonus. A one-person household may get \$75 if they complete all survey activities; a four-person household may get up to \$135 if they complete all survey activities.

Taking part in the study is **voluntary**. If you choose to participate, you can skip any question you do not want to answer or that makes you feel uncomfortable. Deciding to take part in the study, or deciding not to, will not affect eligibility and any benefits or services received by anyone in your household—now or in the future.

We are required by law to protect your privacy. We promise to keep your information confidential. Academic and government researchers will use your information in combination with other data to conduct national-level research that would help assure all Americans have access to healthy diet at affordable prices. We may obtain data about your household’s participation in government food programs, such as the SNAP program (formerly food stamps) from state agencies. Any data obtained this way will also be kept strictly confidential and will be used **ONLY** for research and statistical purposes. It is against the law for us to disclose or publish your name or address. All the people who work on this study take an oath to protect the confidentiality of the information we collect.¹

I read the information above and all my questions were answered. By printing my name and signing below, I show that I agree to take part in this study.
