prescription drug coverage through a (Medicare Prescription Drug plan/Medicare Advantage plan).] And, in most Medicare drug plans there is a coverage gap, sometimes called a “doughnut hole”. I have a picture to help explain this term.

**SHOW CARD SC1A**

Coverage is divided into four phases in most Medicare drug plans. Depending on the plan, in the first phase, the beneficiary may pay a deductible. In the second phase, the beneficiary pays a portion of the total cost of each prescription and the drug plan pays a portion of the cost. In the third phase, there is a gap in coverage, when most people must pay 100 percent of their drug costs out of their own pockets. This phase is commonly known as the coverage gap, or “doughnut hole”. After paying a certain amount of out-of-pocket costs, the fourth phase of coverage begins. In the fourth phase, the beneficiary pays a small percentage of the total cost of each prescription and the drug plan pays the remaining amount.

Before today, have you heard about the coverage gap or “doughnut hole” that is part of most Medicare drug plans?
