PART C. JUSTIFICATION OF NHES QUESTIONNAIRES

NHES:2011 field test data will be collected using different test versions of a household screener questionnaire and two topical questionnaires. The NHES:2011 field test instruments are as follows:

- The household **screener** will be used to engage potential respondents and collect the information needed to identify eligible households and persons for topical surveys. Information that will be used to assess nonresponse will also be collected on some of the forms. The field test includes multiple versions of the screener, which will permit the assessment of survey questions intended to engage the respondent and of different ways of collecting the information needed to identify and sample eligible household members.
- The **Early Childhood Program Participation Survey (ECPP),** to be administered to a parent or guardian knowledgeable about the care and education of children from birth through age 6 and not yet in kindergarten (infants, toddlers, and preschoolers).
- The **Parent and Family Involvement in Education Survey (PFI)**, to be administered to a parent or guardian knowledgeable about the education of children enrolled in school in kindergarten through grade 12 or homeschooled at these grade levels (homeschool version will be administered in 2012 but not in 2011). To reduce respondents' burden, two questionnaires were developed for this survey: one for parents of children attending school and one for parents of homeschooled children. For the field test, the homeschool version will not be used and these households will be coded as ineligible.

As noted throughout this document, the NHES:2011 field test is being conducted to test methodological alternatives for the larger NHES:2012 data collection. The testing of multiple versions of the household screener and topical instrument reflects this goal.

As noted previously, only methodological results will be published from the NHES:2011. However, the NHES:2012 will provide full data sets using similar instruments to those tested during NHES:2011. The topics addressed in the ECPP and PFI have been covered in previous NHES administrations. Many of the items were reworded to account for the change from an interviewer administration mode to a self administrated one. In revising the survey instruments, it was necessary to remove some past ECPP and PFI items and simplify others. The instruments went through multiple rounds of cognitive interviewing and are currently in the final stages of these interviews. In some cases, alternate wording or question structures were proposed. These alternates will be tested through a split panel during the NHES:2011.

The screeners, ECPP questionnaires, and PFI questionnaires appear in Appendix B. It is important to note that question wording and content may be modified as a result of the final round of cognitive interviewing. Topic areas are not expected to change.

C.1 Screeners

The household screener is an essential part of the NHES survey instrumentation. It is used to confirm that the sampled address is a residential address, determine whether the household includes potentially eligible children or youth, and collect information required for conducting within-household sampling.

For the NHES:2011 field test, there are five versions of the screener which will be randomly assigned to households. The four versions differ in their content and the questions used to enumerate children. Content differences are the result of the inclusion of education policy and opinion questions. The NHES:2009 screenout questionnaire will be included as an overall control group. A description of the content of the screeners follows. The screener version that best maximizes response among targeted households will carry forward in the NHES:2012. If it is learned that the screeners have a differential impact on response based on household characteristics (e.g., household size or zip code), we may use multiple screener versions and target them based on frame data in the NHES:2012.

Household Characteristics. All versions of the screener contain household characteristics questions in an effort to collect information about the composition of the household. A household respondent is asked about the number of children 20 or younger living within the household. In the "Engaging" version only, the household respondent is also asked about tenure (rent/own) and length of tenure at this address. Questions are also asked on the Engaging form about highest level of education and language among household members. A telephone number is collected on all screener versions, except the 2009 pilot form, in case topical survey mail contact attempts fail and telephone follow-up is necessary.

Opinions on Current Issues. This content applies only to the "Engaging" versions of the screener, and the specific items are subject to change based on the results of cognitive testing. A household respondent is asked general questions on the quality and safety of schools in his/her community and about school quality nationally. Questions are asked about education or training courses taken by adults to improve skills, keep a job, or find a new job. Also, questions related to household literacy environment are asked, such as the availability of 10 or more books, possession of magazines or other reading materials, and the number of hours the respondent reads each week. These questions have been included on the advice of methodological experts in order to explore a method of increasing response by engaging the respondent with relevant and interesting questions that better reflect the topic

and sponsoring agency. Further potential uses of these items are as measures related to nonresponse to the topical questionnaire.

Child Enumeration. In all versions of the screener, some form of child enumeration is used; the screeners differ in the layout and design of these questions. The engaging questionnaires use a column format over three pages for collecting information on up to six children within the household. This form of navigation is the same as other areas of the questionnaire. The screen-out questionnaires use a grid format over two pages that are viewable on opposite facing pages when the questionnaire is prepared in booklet format. This form of navigation reduces the space necessary for enumerating children and may be easier for respondents to navigate, reducing the potential for respondent errors such as omission of a child.

The "name" versions ask for the child's first name, initials, or nickname so the selected child can be specified in the topical questionnaire. In both versions, the respondent is also asked for the child's age, gender, enrollment status and grade. These items are used to determine which topical questionnaire will be sent to the household for the sampled child and will also be used to specify the selected child in the topical interview.

Commonly Asked Questions. The back of each version of the screener contains commonly asked questions and responses intended to address questions that may be common among respondents. The purpose of this material is to inform respondents fully and assure them of the sponsorship, legitimacy, and privacy protections of the study.

Exhibit 8 includes item-by-item descriptions of the NHES screeners, below.

C.2 Early Childhood Program Participation Survey

The NHES ECPP interview draws questionnaire items from several previous NHES administrations and is very similar to the NHES:2005 and NHES:2001 ECPP interviews. The following topics are included in the survey:

- Participation in relative care, nonrelative care, and center-based programs, and Early Head Start/Head Start;
- Care/program characteristics such as location, days and hours per week, and cost;
- Care provider characteristics such as language and race/ethnicity;
- Difficulty in finding care and child care selection criteria;
- Family education activities such as visiting a library and reading to a child;
- Emerging literacy and numeracy;
- Children's health and disability;
- Parent characteristics; and
- Household characteristics.

Below, the survey items are discussed in more detail. The descriptions are presented in the order the questions appear in the printed instrument.

Instructions

The first page of the questionnaire identifies the selected child using information from the screener and provides the respondent with instructions for completing the questionnaire. Contact information is provided (a toll free number) in case there is confusion about the selected child or the household has no child fitting the description given.

Section 1. Early Childhood Care and Programs

A major focus of the ECPP Survey is addressed in the first three sections of the questionnaire, which focus on types of nonparental care and education: care by relatives, care by nonrelatives, and center-based programs. Three sets of items within section 1 collect extensive information to describe the different types of nonparental care and education that children may receive. These items provide detailed information on the extent of current participation in the different types of care arrangements and programs, location, amount of time children spend in current arrangements or programs, and the financial cost of current care arrangements or programs to the child's household. This information can in turn be related to children's personal, family, and household characteristics. The following information is collected in each of these series of items:

- The number of current arrangements or programs of the respective type;
- The location of the arrangement or program (including whether programs are located at parents' workplaces);
- The number of days and hours per week the child receives care or attends a program on a weekly basis, and the length of time in attendance of the arrangement or program;
- The language of the care provider;
- Whether the care provider will care for the child when the child is sick;
- Services provided by center-based programs; and
- The cost to the household of the arrangement or program, and assistance in paying for the arrangement.

In addition to these common items, the section on relative care contains an item concerning the relationship of the care provider to the child and an item asking the age of the relative care provider. Age of the nonrelative care provider and if the parent already knew the care provider is also obtained in the nonrelative care section. The section on center-based care asks additional items on whether the center provides health services such as hearing, speech, or vision testing, and if the center is religiously affiliated.

<u>Care Your Child Receives From Relatives (Questions 1-16)</u>. This section collects information regarding care provided on a regular basis by relatives other than the child's parents. This includes grandparents, aunts or uncles, brothers or sisters, etc. Occasional babysitting is explicitly excluded. The care may be provided in the child's home or in another home. For the child care

arrangement in which the child spends the most time, key facets of care such as location, hours, and cost are collected. Limited information on other relative care arrangements is collected to provide a full accounting of time spent in care without undue burden.

Care Your Child Receives from Nonrelatives (Questions 17-33). This section collects information on care provided in a private home on a regular basis by nonrelatives. This includes home child care providers, regular sitters, or neighbors. Care may be provided in the child's home or in another home. Occasional babysitting is explicitly excluded. Key indicators (e.g., location, hours, cost) are collected for the primary nonrelative care arrangement, and hours for other arrangements are collected to provide a full accounting of time spend in care.

Day Care Centers and Preschool Programs Your Child Attends (Questions 34-50). This series collects information on programs provided for groups of children in day care centers, preschools, and pre-kindergartens. This can include daycare centers, preschools, prekindergartens, or center-based Head Start or Early Head Start programs. Key indicators (e.g., location, hours, and cost) are collected for the primary center-based program arrangement, and hours for other arrangements are collected to provide a full accounting of time spend in care.

Early Head Start/Head Start (Questions 37 and 51). Head Start is a federally funded early childhood education program for disadvantaged children. Most participants are 3 to 5 years old. Participation in an Early Head Start program may begin at birth. Respondents with a child in center based care are asked if it is a Head Start arrangement. Following the collection of relative, nonrelative, and center-based care arrangements, respondents are asked if the child has ever attended Head Start or Early Head Start. These items help to characterize the arrangements in which a child participates.

Section 2: Finding and Choosing Care for Your Child (Questions 51-54)

Access to care and early education programs is a topic of concern to experts in child development and early education and to policymakers. This section asks parents if they feel they have good choices for child care where they live and the difficulty parents have had finding the type of child care they want. The last item addresses the importance of factors in choosing child care and early education arrangements.

Section 3: Family Activities (Questions 55-59)

Activities with potential education benefits that families can do together are measured in this section of the questionnaire. Parents are asked about reading to their children and the amount of time spent reading to the child every day. In addition, parents are asked about other activities such as telling a story, teaching letters or numbers, or doing arts and crafts. Also asked of parents is whether someone in the family has visited a library with the child in the past month. These items are indicators of the richness of the child's education environment at home and the parents' involvement in promoting the child's development.

Section 4: Things Your Child May Be Learning (Questions 60-67)

This series measures the child's accomplishment of developmental tasks that indicate readiness for school. Analysts and policymakers are interested in tracking progress in emerging literacy and numeracy across time and examining the relationship of emerging literacy and numeracy with preschool program participation and family education activities.

Section 5: This Child's Health (Questions 68-76)

This section includes items about the child's overall health, any serious medical conditions, and disability services the child may be receiving. The presence of diagnosed conditions is an important risk factor and is related to children's development and education experiences in the preschool years as well as their later experiences in school. Condition status may be associated with access to nonparental care and education programs.

Section 6: Child's Background (Questions 77-84)

Questions about the child's month and year of birth, race/ethnicity, country of origin, and language will be used to examine differences in children's participation in care and education programs. For children whose primary language is not English, a question about participation in English language education is asked. English language education may help children to participate in other early education and prepare for school.

Sections 7 and 8: Child's Mother or Female Guardian/ Child's Father or Male Guardian (Questions 85-115)

These sections collect information on the child's parents or guardians who reside in the household: mother and father, or other guardians if parents are not present. The topics include age at first becoming a parent or guardian, native language, country of origin, education attainment, and employment status. These items on parent characteristics measure factors that may be associated with participation in early care and education and may also indicate risk factors, such as low parent education, that could be associated with participation in care, child development, and preparation for school.

Sections 9 and 10: Your Household and Questions about You (Questions 116-131)

This final series of items collects information on the relationship of people in the household to the child, receipt of public assistance, and household income. Household composition is an indicator of resources for care and opportunity for interaction within the household. Receipt of public assistance and household income are used to classify families according to the economic resources available to them, and to examine the relationship of the family's economic status to early childhood program participation. These variables, taken along with parent characteristics, can be used to identify children who may be at risk in terms of development and education preparation.

Early Childhood Care and Program Interview Research Questions

The items in the Early Childhood Care and Program (ECPP) Interview will obtain information useful for investigating the following research questions.

- 1. To what extent do preschool children (birth to age 6 and not yet in kindergarten) participate in nonparental care and early childhood programs?
 - a. In what different types of nonparental care arrangements/programs do children participate?
 - b. How many children participate in multiple care arrangements/programs?
 - c. Where are care arrangements/programs located?
 - d. How much time do children spend in nonparental care arrangements/programs?

- e. What is the relationship of relative care providers to the children for whom they are caring?
- f. What is the cost and what payment arrangements are made for the cost of care arrangements/programs?
- g. How are child and family characteristics related to the care or early childhood education children receive?
- h. What resources do parents use to find child care?
- i. Is (emergent) literacy and numeracy related to the type of child care, amount of time in child care, or stability of child care?
- j. What is the availability of sick child care?
- k. How does parents' employment status influence their choice of arrangements?
- l. Do parents report difficulty in finding child care?
- m. What factors do parents consider important when selecting child care arrangements?
- 2. How has the participation of preschool children in nonparental care arrangements/programs changed from the 1991 to the present?
 - a. Have the subpopulations of children participating in various types of care arrangements/programs changed?
 - b. Has the amount of time children spend in care arrangements/programs changed?
- 3. Do at-risk children have the same access to nonparental care arrangements/programs as other children?
 - a. Are at-risk children more or less likely to participate in nonparental care arrangements/programs than other children?
 - b. Do at-risk children participate in different numbers and/or types of care arrangements/ programs than those children not classified as at-risk?
- 4. What type of child care subsidies/benefits have parents received from government agencies or from their employers?
- 5. What is the extent of families' involvement in family-child education activities?
 - a. To what extent do families participate in selected education activities at home with their child?
 - b. Is participation in education activities related to preschoolers' emerging literacy and numeracy?

6. How is children's health/disability status related to their participation in nonparental care and education?

These research questions are reflected in exhibit 10 which includes item-by-item descriptions of the ECPP questions and their associated research questions.

C.3 Parent and Family Involvement in Education Survey

The PFI questionnaires draw upon the PFI surveys of 1996, 2003 and 2007. The PFI is for parents of children enrolled in school and was developed for ease of respondent self-administration. The following topics are included in the PFI survey:

- School characteristics such as control (public/private) and school choice;
- Student experiences in school, academic grades, and grade repetition;
- Parent and family involvement/participation in school including involvement in school decision-making and barriers to such participation;
- School practices to involve and support families;
- Family involvement in children's schoolwork;
- Homeschooling (will not be included in 2011 but will be in 2012);
- Family activities such as arts and crafts, visiting a library, or attending a play or concert;
- Children's backgrounds;
- Children's health and disability;
- Parent characteristics; and
- Household characteristics.

School enrollment or homeschooling status and grade are collected for all children in the screener and displayed at the beginning of the self-administered topical interview. Parents of children enrolled in kindergarten through high school, are administered questions on their children's school and their experiences in school. Parents of children in elementary or secondary school are asked about their children's experiences in school and feedback from teachers on school performance, their involvement in school, school practices to involve families, and their involvement in homework. All parents are asked questions on their home activities and family involvement outside of school. Finally, parents of all children are administered items on their children's health and disability and demographic characteristics, the characteristics of parents/guardians residing in the household, and household characteristics.

Below, the survey items are discussed in more detail. The descriptions below begin with the questionnaire for parents of children enrolled in school.

Parent and Family Involvement in Education Questionnaire

Instructions

The first page of the questionnaire identifies the selected child using information from the screener and provides the respondent with instructions for completing the questionnaire. Contact information is provided (a toll free number) in case there is confusion about the selected child or the household has no child fitting the description given.

Section 1: Child's Schooling (Questions 1 through 19)

This section covers questions that are asked of all parents with children in elementary, middle or high school who are not homeschoolers. The section provides detailed information on the characteristics of the school that children attend. This covers topics such as whether the school is a private or public school, whether it is a school that has been assigned or is a school that parents have chosen for their children, whether it is a charter school, and whether it is a Catholic or church-related school. The characteristics of schools provide important contextual variables that may be related to parent and family involvement and children's education experiences.

A series of questions (**Questions 6 through 9**) asks for information on whether parents chose the school that their children are enrolled in, including the information that parents obtained about the school before making a choice and whether the school was the parent's first choice for their child.

A list of schools in the family's area will be provided on the last page of the questionnaire. Identifying the child's school permits linking data about schools from existing data sources at NCES, notably the Common Core of Data and Private School Universe Survey. This permits the analysis of family experiences in the context of school characteristics including public/private control, religious affiliation, school size, urbanicity, standardized test performance, and school population measures. These measures can also be used to assess the accuracy of parent responses about school characteristics.

This section of the instrument also includes items that address specifics of children's and families' experiences with schools that may be associated with parent involvement:

- Student experiences in school including grades and academic performance (Questions 13 and 19);
- Teacher feedback on child's school performance and behavior (Question 14);
- Grade repetition since starting kindergarten (**Questions 16**);
- Suspension or expulsion from school (**Question 17**); and
- Parents' plans for their children's education after high school (Question 18).

Section 2: Families and Schools (Questions 20-25)

A core area of interest in the PFI Survey is parents' involvement in their children's schools. This section includes questions on the frequency and nature of parents' involvement in school including attending meetings, volunteering, serving on school committees, and other types of contact with school staff and teachers. Another aspect of parent's contact with the school involves school practices to communicate with parents regarding their child's progress and placement and the parent's expected role. Schools contact parents for various reasons including students' performance, school volunteering opportunities, other methods and opportunities that can help children in their education, and planning for attending college or work after completion of education. The nature of contact could include contact via letters or newsletters as well as email. Finally, parents are given the opportunity to express their level of satisfaction with the school.

Section 3: Homework (Questions 26-31)

Parent and family involvement in homework is another form of support for children's education; Section 3 addresses this topic. This section includes questions about the amount of homework that children receive, the home environment that families create for children to do homework, and the involvement of parents and other family members in ensuring that children complete their homework.

Section 4: Family Activities (Questions 32-34)

Parent and family involvement in non-school activities with potential education benefits represents another way that parents and families can support children's education and development. Parents of children in elementary school are asked about other activities such as telling a story, doing arts and crafts, playing sports and games, or getting involved in other projects. Parents are asked to report on the activities done with their child in the past week and in the past month with anyone in the family. Parents of older children who are in middle or high school are asked similar questions about activities that are appropriate to their age. Again, parents are asked to report on the activities done with their child in the past week and in the past month with any family member.

Section 5: Child's Health (Questions 35-43)

This section includes items to identify disabled children and to determine whether children with disabilities are receiving services. The presence of disabilities is an important risk factor for all children and is related to children's development and education experiences in school. These items will also provide the data to analyze the accessibility of special education and other programs and plans for disabled children.

Section 6: Child's Background (PFI-Enrolled, Questions 44-51)

This section collects demographic information on the child's race/ethnicity and country of origin. These characteristics can be correlated with the various levels of family involvement in children's education.

Sections 8 and 9: Child's Mother or Female Guardian/ Child's Father or Male Guardian (Questions 52-88)

These sections collect information on the child's mother or female guardian and on the father or male guardian who resides in the household. The topics for mothers include age at first becoming a mother or guardian, native language, country of origin, education attainment, and employment status. The same items are asked for fathers, except for the age at first becoming a parent. The alternate version of the questionnaire will test a revised set of items designed to better capture household arrangements. The headings have been revised to Parent 1 and Parent 2 and both parents are asked identical questions. The alternate version will also enumerate everyone in the household and their relationship to the reference child. These items on parental characteristics measure risk factors that could be associated with children's development and progress through school. Other questions within both parent characteristics sections can be used to relate family involvement in education with parents' characteristics including their education, choice of employment as well as the number of hours they work.

For parents of children who attend school, questions about school accommodations for mothers and fathers whose primary language is not English are also included in these sections. These are important indicators of possible barriers to parent involvement.

Sections 8 and 9: Your Household and Questions about You(Questions 89-106)

This final series of items collects information about who lives in the household with this child, receipt of public assistance, and household income. Receipt of public assistance and household income can be used to classify families according to the economic resources available to them, identify child risk factors, and examine the relationship of the family's economic status to school participation.

Parent and Family Involvement in Education Research Questions

The items in the Parent and Family Involvement in Education Interview will obtain information useful for investigating the following research questions.

- 1. In what ways and to what extent are parents and families involved in their children's schooling?
 - a. To what extent are parents and families involved in choosing their children's schools?
 - b. What are the reasons for parents' school choices and what types of information do parents obtain to make these choices?
 - c. In what ways are parents and families involved directly with their children's schools (e.g., meetings, volunteering, etc.)?
 - d. What is the relationship between parenting style and the extent of parents' and families' involvement in school choice and children's schooling?
 - e. What is the relationship between parent and family involvement in school and student experiences and performance (e.g., grades, retention).
- 2. What are parents' perceptions of communication by teachers or other school personnel with parents or families?
 - a. What is the type and purpose of school communication reported by parents including school contact to discuss both problems and how well the child is doing in school?
 - b. What frequency and modes of school contact with families do parents report?
 - c. What are the differences in parent perceptions of the purpose and frequency of communication by school characteristics?
 - d. How are parent perceptions of school/family communication related to their involvement with the school, in homework, and in learning activities outside of school?
- 3. What types of school practices to involve and support families are reported by parents?
 - a. What are the school practices that parents report?
 - b. What is the relationship between school practices and different types and levels of involvement with the school, in homework, and in learning activities outside of school?

- c. What are the differences in reports of school practices based on school characteristics?
- d. What is the relationship of parent-reported school practices to levels of involvement by socioeconomic status?
- e. What is the relationship between family involvement with the school and parent assessments of the school environment concerning parent and family involvement?
- 4. What are the barriers to school involvement by families?
 - a. What are the language barriers that language minority families face and how do they relate to the type and extent of their involvement with the school?
 - b. Do parent perceptions of the efficacy of their involvement relate to the type and extent of family involvement?
- 5. In what ways and to what extent are parents and other household members involved in their children's homework?
 - a. How does the involvement of household members in homework relate to student experiences and performance?
 - b. How often do household members help children with homework?
 - c. How does the environment that families create for homework completion relate to student experiences and performance?
 - d. How does parenting style relate to the extent of parents' involvement in children's homework?
- 6. In what ways are parents and family members involved in non-school activities with children at home?
 - a. What is the type and extent of family involvement in daily activities and other learning activities of children and how does this relate to student experiences and performance?
- 7. How is children's health/disability status related to family involvement and student behavior, experiences and performance?
 - a. How is children's health related to the level of parent and family involvement in their education?
 - b. What is the extent of parent reporting of children's disabilities?
 - c. How are children's health and disabilities related to the extent of parent and family involvement, school practices, and student experiences and performance?

- d. To what extent do children receive services for disabilities and from what sources?
- e. What is the extent of children's participation in Individualized Education Programs or Plans (IEPs) or enrollment in special education classes?
- f. What is the extent of parents' and families' involvement with the school in developing their children's IEPs?
- g. Are parents satisfied with their children's IEPs or special education classes or services, including the school's communication with the family, the special needs teacher or therapist, and the school's ability to accommodate the child's special needs?
- 8. What is the extent of homeschooling of children during their school years?
 - a. To what extent do homeschooled students also attend schools to receive some of their instruction?
 - b. To what extent do parents use homeschool communities or resources such as distance learning/Internet to obtain materials or develop curricula?
 - c. Of the total school-going years, how many years are children homeschooled?
 - d. What are the reasons for homeschooling by parents?
 - e. What is the role of the Internet and the use of other technology or media for homeschooling instruction and curriculum development?

These research questions are reflected in exhibit 11 which includes item-by-item descriptions of the NHES Parent and Family Involvement in Education Interview questions and their associated research questions.
