Dietary Supplements (Vitamins/Minerals): Dietary supplements are often labeled as "dietary supplements" and are used in addition to foods and beverages. Dietary supplements are not intended to replace food. Include vitamins, minerals, antacid/calcium supplement products, fiber supplements, amino acids, performance enhancers, herbs, herbal medicine products, and plant extracts used as dietary supplements. Include products that are taken orally or given by injection. Do not include beverages, such as tea, and skin creams. Meal replacement beverages, weight loss and performance booster drinks, and food bars are considered foods, not dietary supplements.

Health (Care) Professional: A person entitled by training and experience and possibly licensure to assist a doctor and who works with one or more medical doctors. Examples include: doctor's assistants, nurse practitioners, nurses, lab technicians, and technicians who administer shots (i.e., allergy shots). Also include paramedics, medics and physical therapists working with or in a doctor's office. Do not include: dentists, oral surgeons, chiropractors, chiropodists, podiatrists, naturopaths, Christian Science healers, opticians, optometrists, and psychologists or social workers.

Dentist: Medical professional whose primary occupation is caring for teeth, gums and jaws. Dental care includes general work such as fillings, cleaning, extractions, and also specialized work such as root canals, fittings for braces, etc.

Doctor: The term refers to both medical doctors (M.D.s) and osteopathic physicians (D.O.s). It includes general practitioners as well as specialists. It does not include persons who do not have an M.D. or D.O. degree, such as dentists, oral surgeons, chiropractors, podiatrists, Christian Science healers, opticians, optometrists, psychologists, etc.

Prescription Medication: Prescription medications are those ordered by a physician or other authorized medical professional through a written or verbal prescription for a pharmacist to fill. Prescription medications may also be given by a medical professional directly to a patient to take home, such as free samples.

Prescription medications do not include:

- Medication administered to the patient during the event in the office as part of the treatment (such as an antibiotic shot for an infection, a flu shot, or an oral medication) unless a separate bill for the medication is received;
- Diaphragms and IUD's (Intra-Uterine Devices); or
- Some state laws require prescriptions for over the counter medications. Sometimes physicians write prescriptions for over the counter medications, such as aspirin. Consider any medication a prescription medication if the respondent reports it as prescribed. If it is an over the counter medication, however, the prescription must be a written prescription to be filled by a pharmacist, not just a written or oral instruction. If in doubt, probe whether the patient got a written prescription to fill at a pharmacy.

## **ENDURANCE PERFORMANCE—TREADMILL (AGES 6-15)**

### Test protocol (ages 6-11)

Each participant will perform to volitional fatigue. The protocol involves maintaining a fairly constant speed with an increase in incline by 2.5% at 2 minute stages. The main goals of the protocol are: 1) the child will be able to perform the test for 5-12 minutes, and 2) the maximum incline will not exceed 12%. To ensure that most children will be able to perform the test, the protocol will start slowly with walking and then increase in speed at the later stages for very fit children. After a 2 minute warm-up walk, 6-7 year old children will walk at an average speed of 2.75 mph with an increasing incline; 8-9 year old children will walk at an average speed of 3.25 mph, increase to a run of 4.5 mph at the last two stages, with an increasing incline; and 10-11 year old children will walk at an average speed of 3.5 mph, increase to a run of 5.0 mph at the last two stages, with an increasing incline. The protocol includes 7-8 stages as well as warm up and recovery/cool down stages. Children are not expected to be able to complete all stages.

Data collected: Heart rate (before the test and at the end of each stage), treadmill speed and grade, total duration on the treadmill, reasons why participant stopped exercising

## **ENDURANCE PERFORMANCE—TREADMILL (AGES 6-15) continued**

Test protocol (ages 12-15)

The speed and grade for participants 12-15 will be identical to those in the NHANES cardiovascular fitness component from 1999-2006 and based on age, gender, BMI and self reported physical activity level. There will be 4 stages: warm up, stage 1, stage 2 and cool down.

Data collected: Heart rate (before the test and at the end of each stage), treadmill speed and grade, reasons why participant stopped exercising and perceived exertion level during each stage.

**Exclusion Criteria (AGES 3-15)**

All exclusion questions will be asked of the parent/guardian at the check-in to the examination center to identify children who cannot participate in survey components. Pregnant girls will be excluded from the health examination. All other children will be able to participate in the dietary recall interview.

One exclusion question specific to the lower body muscle strength (asked of parents or guardians of children):

In this test, we will be asking your child to push {his/her} legs as hard as {he/she} can against an object. Do you know of any reason why your child should not do the test?

- 4 DON'T KNOW (EXCLUDE FROM EXAM)

IF YES, SPECIFY REASON \_\_\_\_\_

### Test protocol

Children will be tested in a sitting position. Maximum isometric knee extension will be measured using a hand held dynamometer (HHD). The knee will be positioned in approximately 90 degrees of flexion and the dynamometer placed just below the shoe top on the shin. The participant's hips and thigh will be secured to the chair with straps. The participant presses into the HHD slightly to stabilize the device. Participants will then be asked to take 1 or 2 seconds to come to maximum effort, during which they are to push as hard as possible into the HHD. The counterforce to the knee extension force is supplied by a strap with stabilization by a staff person through the HHD. Participants will be given encouragement and asked to stop after 4 to 5 seconds. Participants will be given three tests of each lower extremity.

Data collected: Peak force in pounds/kilograms.

**DRUG USE – DUQ**  
**Target Group: SPs 12-15**

The following questions ask about use of drugs not prescribed by a doctor. Please remember that your answers to these questions are strictly confidential.

DUQ.200 The first questions are about marijuana and hashish. Marijuana is also called pot or grass. Marijuana is usually smoked, either in cigarettes, called joints, or in a pipe. It is sometimes cooked in food. Hashish is a form of marijuana that is also called “hash.” It is usually smoked in a pipe. Another form of hashish is hash oil.

**MODIFIED PULL UP (AGES 5-15 YEARS)**

One exclusion question specific to the modified pull-up (asked of parents or guardians of children)

In this test, we will be asking your child to pull {himself/herself} up off the ground using their arms and holding the position. Do you know of any reason why your child should not do the test?

- 1      Yes                    (EXCLUDE FROM EXAM)
- 2      No
- 3      REFUSED                (EXCLUDE FROM EXAM)
- 4      DON'T KNOW            (EXCLUDE FROM EXAM)

IF YES, SPECIFY REASON \_\_\_\_\_

Test protocol

With the participant lying on his/her back on a flat surface, the horizontal bar should be positioned about 1-2 inches above the participant's outstretched arms. The participant is asked to clasp the horizontal bar with an overhand grasp, palms facing away from the body. When the participant is ready, the examiner gives the signal "Go." On hearing the signal "Go," the participant raises his/her body by flexing the arm until the chest touches an elastic band or plate that hangs 8 inches down from the horizontal bar. The body should be kept straight with the hips up and only the heels touching. Then the participant lowers back to the starting position. This procedure should be repeated as many times as possible. The test will stop when the participant pauses for two or more seconds.

Data collected: Number of pull-ups completed

**PLANK (AGES 3-15 YEARS)**

Test protocol

Participants will be tested with the front plank. For this exercise, the participant lies face down on a mat resting on the forearms with palms on the floor. Then the participant pushes off the floor, raising up onto toes and resting on the elbows. The back is kept straight without the stomach dropping or the hips rising up.

Participants should maintain the position for as long as possible. Participants will be able to self-select when they want to stop the test; no undue stress or pressure will be placed on the participant. The test ends when a straight back can no longer be maintained and the hips drop toward the floor, or the participant requests to stop.

Data collected: number of seconds the plank position is held

## **TOTAL GROSS MOTOR DEVELOPMENT (AGES 3-5 YEARS)**

### Test protocol

The Test of Gross Motor Development – Second Edition (TGMD-2) will be used for the motor skills test. The TGMD-2 is a norm-referenced measure of common gross motor skills that develop early in life. The TGMD-2 is made up of 12 skills (six for each subtest):

- Locomotor: run, gallop, hop, leap, horizontal jump, slide
- Object Control: striking a stationary ball, stationary dribble, kick, catch, overhand throw, and underhand roll

Data Collected: Each gross motor skill includes several behavioral components which are presented as performance criteria. For example, performance criteria for the run skill are 1) arms move in opposition to legs, elbows bent, 2) brief period where both feet are off the ground, 3) narrow foot placement landing on heel or toe (i.e., not flat-footed), and 4) nonsupport leg bent approximately 90 degrees (i.e., close to buttocks). If the child performs a behavioral component correctly, DHANES staff will record a 1, if the child does not perform a behavioral component correctly, the staff will record a 0. A partial score, such as 0.5 to show that the child displays the criterion, but is inconsistent, is not allowed.

After recording the result for each of the two trials, staff will total the scores of the two trials to obtain a raw skill set score for each behavioral component. The skill scores add up to a raw subtest score (Locomotor, Object control), which is converted to a standard score using a table in the TGMD-2 Examiner's Manual. Then these standard scores are combined and converted to an overall Gross Motor Quotient.

## UPPER BODY MUSCLE STRENGTH (Age 6-15 years)

### I. Pre-Test Questions:

Participants are excluded from this component if they are unable to hold the dynamometer with both hands (e.g., missing both arms, hands, or thumbs on both hands, or paralysis of both hands). Participants who are able to grip the dynamometer with one hand will still perform the component. Participants who had surgery on either hand or wrist in the last three months will not be tested on that particular hand.

The following pre-test questions are asked about the hand or hands that are eligible for the Grip Test.

- MGQ.050 Have you **ever** had surgery on your hands or wrists for **arthritis** or **carpal tunnel syndrome**? If Yes, which hand.
- MGQ.070 Have you had any pain, aching or stiffness in your **right** hand in the past 7 days? If Yes ask the next two questions.
- MGQ.080 Is the pain, aching or stiffness in your **right** hand caused by **arthritis, tendonitis, or carpal tunnel syndrome**?
- MGQ.090 Has the pain, aching or stiffness in your **right** hand gotten worse in the **past 7 days**?
- MGQ.100 Have you had any pain, aching or stiffness in your **left** hand in the past 7 days? If Yes ask the next two questions.
- MGQ.110 Is the pain, aching or stiffness in your **left** hand caused by arthritis, tendonitis, or carpal tunnel syndrome?
- MGQ.120 Has the pain, aching or stiffness in your **left** hand gotten worse in the past 7 days?
- MGQ.130 Are you right-handed, left-handed, or do you use both hands equally?

### II. Grip Test:

Three data points per hand are captured and the results are recorded in kilograms (kg) to one digit after the decimal point.

Right hand grip strength (readings 1, 2, and 3)	kg
Left hand grip strength (readings 1, 2, and 3)	kg
