

Justification for change to OMB #0920-0869

Promoting HIV Testing among Low Income, Young, Heterosexual Black Men

We request a non-substantive change to a previously OMB-approved document-Attachment 3d "One-on-one Survey." This attachment was included in the original OMB package submission, so the burden has been accounted for already. The approval for 0920-0869 was for Phase 1 only. We have completed Phase 1 and added some additional questions to Attachment 3d based on participant responses in Phase 1.

Please see attachment 3d for the specific questions that have been added. After the change request for this survey (Phase 2) is approved, this one-on-one survey will be administered by ACASI to the study participants. The target population is the same as originally approved by OMB, and no change is requested in either burden, participants or methodology with this request.
