SUPPLEMENTARY INFORMATION:

Abstract: Beginning in 1997, the U.S. Geological Survey has collected voluntary data regarding amphibian malformations. Sightings are reported via an electronic form. The form is sent to the USGS National Biological Information Infrastructure (NBII)

program, which manages the North American Reporting Center for Amphibian Malformations (NARCAM). Each malformation occurrence submitted is carefully reviewed by trained professional herpetologists for quality and accuracy. Data associated with the validated reports, including species, malformation type, and geospatial information, are made accessible to the public via the NARCAM Web site. Information may be used by scientists and resource managers within Federal, State, and local agencies, as well as the general public, to identify areas where malformed amphibians have been reported, and the rates of occurrence. The NARCAM dataset is the only publicly available, national dataset on amphibian malformations.

We will be requesting OMB approval for an extension of the current form used for the NARCAM data collection efforts.
