<p>The National Household Education Surveys Program (NHES) collects data directly from households on early childhood care and education, children's readiness for school, parent perceptions of school safety and discipline, before- and after-school activities of school-age children, participation in adult and continuing education, parent involvement in education, school choice, homeschooling, and civic involvement. NHES surveys have been conducted approximately every other year from 1991 through 2007 using random digit dial (RDD) sampling and telephone data collection from landline telephones only. Each survey collection included the administration of household screening questions (screener) and two or three topical surveys. Like virtually all RDD surveys, NHES Screener response rates have declined (from above 80% in early 1990s to 53% in 2007) and the decline in the percentage of households with landline telephones (from ~93% in early 2004 to about 75% in 2009 mostly due to conversion to cellular-only coverage) raises issues about population coverage. To address these issues, the NHES is transitioning from a Random Digit Dial (RDD) interviewer administered study to an Address Based Sample, self-administered study. A feasibility test of the methodology was conducted successfully in 2009. In 2011, the National Center for Education Statistics (NCES) will conduct a large scale pilot test to further refine the methodology. A number of interventions to improve response rates and data quality will be tested in 2011. In 2012, NCES will conduct the first full-scale production data collection utilizing the new design. The 2011 test and 2012 data collections will utilize the Parent and Family Involvement in Education (PFI) and Early Childhood Program Participation (ECP) modules. This submission requests OMB's approval for minor changes done to the NHES 2011-12 survey that was approved on October 26, 2010 (OMB# 1850-0768 v.7).</p>
