

RIN: 1219-AB75

NOTE TO REVIEWER

MSHA is requesting approval of the attached collections of information under OMB control number 1219-0088 to expedite the review of the information collection requirements contained in this proposed rule.

In this analysis, burden hours are reported in total without regard to mine size for those proposed provisions where the time to perform the burden activity does not vary by mine size.

Otherwise, a breakdown of burden hours are reported by mine size for those proposed provisions where the time to perform the burden activity varies by mine size.

The proposed sections that contain information collection requirements with new burdens in the proposed rule are as follows:

OMB control number 1219-0088 §§ 75.360, 75.363, and 75.364.

In addition, there is a decrease in the burden hours associated with some of the existing provisions because rather than taking the burden for conducting the examinations, MSHA is now taking the burden just for the recordkeeping and reporting.
