**INADEQUATELY RESTED BY SLEEP**

Sleep disturbance does not meet criteria for insomnia, but subject describes being inadequately rested by sleep upon waking.

*Do you usually get a good night's sleep?*

*Are you fairly well rested when you get up?*

*Or after sleeping during the day?*

*How do you feel?*

*When did that start?*

**TIREDNESS**

A feeling of being tired or weary at least half the time.

*Have you been feeling especially tired or weary?*

*How much of the time have you felt tired like that?*

**FATIGABILITY**

Child becomes tired or "worn out" more easily than usual.

*Has s/he become tired or "worn out" more easily than usual?*

*Does s/he feel exhausted even by things that would have been no problem before?*

*When s/he gets tired like that, does it take a long time to get over it?*

**IMPAIRMENT/INCAPACITY**

*Two levels of disturbance or impaired functioning are distinguished:*

*Partial Incapacity; refers to a notable reduction of function in a particular area. If a person is still able to do things, but does them less well, or more slowly, then code as a Partial Incapacity.*

*Severe Incapacity; refers to a complete, or almost complete, inability to function in a particular area.*

*With the exception of the lifelong symptoms mentioned below, most incapacities require a decrement or change in functioning. The decrement can predate the primary period but must still be present during the primary period.*

**SYMPTOM DEPENDENCE**

***For incapacity to be rated it must arise demonstrably from the presence of some particular symptoms or disordered behaviors. For instance, a child who has lost friends because her mother would not allow her to associate with them, would not have that loss of friends rated as an incapacity here. Although, of course, it might have had crippling effects on her social life, it would not count as an incapacity because it was not secondary to any psychopathology of the child. However, it would count if the child was too frightened to leave the house and lost her friends because of it.***

***The specific area of psychopathology responsible for the secondary incapacity should be noted. It is not enough to record that a child was incapacitated in certain ways and that the child had certain psychopathological problems. The incapacity must be linked to the problems that seem to have generated it. Often this is difficult when children have multiple problems and incapacities, but the attempt should be made nevertheless. However, this does not mean that a particular incapacity has to be assigned to one single problem. It will sometimes be the case that several symptoms of different types will contribute to a particular incapacity. When this is the case, each contributing problem area should be recorded.***

***It follows that if an incapacity is to be seen as being secondary to other symptoms, then those other symptoms must have been present before the onset of that incapacity. They must also have resulted in a fall-off from a previous level of attainment or proficiency if they are to be regarded as having resulted in an incapacity. Thus a child who had previously been able to function well enough in class might show a reduced ability to participate in group activities, because he felt too miserable to do so. This would be regarded as an incapacity secondary to the affective symptoms. On the other if a child had always been unable to participate in group activities and later became depressed, an incapacity, secondary to depression, would be recorded only if his capacity to participate in group activities suffered a further decrement from its already low level. If there had been no further decrement, an incapacity in relation to depression would not be recorded.***

**LIFELONG SYMPTOMS/BEHAVIORS**

*In the case of symptoms that have been present throughout life, it will be impossible to show a decrement secondary to the symptoms, because both the symptoms and the putative incapacity will have been present simultaneously. In this situation, provided always that the incapacity can be directly related to the symptoms, it is acceptable to rate it as such. An example might be the social incapacities of a hyperactive child who had always shown such behavior from his earliest years and thus always had disturbed peer relationships.*

**SUMMARY OF RULES FOR RATING INCAPACITY,CONT.**

**SITUATION NOT ENTERED**

*If the subject has not entered a particular social situation (e.g. daycare/school) during the preceding three months, but there is clear evidence from past experience that incapacity would have been manifested had s/he been in the situation (e.g. discordant peer relationships would have been present) then that incapacity is rated as being present, and its date of onset should be determined. The intensity rating should not be higher than the previously actually occurring highest intensity. Quite often in such a situation, the incapacity will have been contributory to the failure to enter the social situation under consideration.*

*The incapacitating effects of the psychopathology do not have to be directly due to the behavior of the child but may be mediated by others. For instance, if a boy were excluded from school for constant fighting and trouble making, that would be counted as an incapacitation of school performance just as much as if the child had failed to attend because of his own anxiety about leaving home.*

**ONSETS**

*The rules for dating the onset of incapacities are essentially the same as those for dating symptom onsets. That is, the decision is first made as to whether or not a particular incapacity was present during the 3 month primary period. If it was, then its onset is coded as the date it appeared at the minimum criterion level required by the glossary definition. Once again, there is a proviso that if the incapacity has been present only intermittently, the onset is dated from when the incapacity began again following the last period of one year (or longer) without incapacity. The dates of exacerbations from partial to complete incapacity are also recorded.*

*Even if a child did not code for any problems in the a particular section of the PAPA, the Incapacity section can not be skipped. If you have enough information, not every question needs to be asked.*

Definitions and questions

**PARENTAL RELATIONSHIPS - PARENT #1**

A child should be able to maintain relationships with his/her parents that are relatively harmonious and capable of containing positive and nurturant communication. The number of arguments or fights that a subject is involved in is rated separately. A change in the relationships, temporally associated with other symptomatology, should ordinarily be expected in order to rate incapacity.

**WITHDRAWAL:** Incapacity involving refusal or inability to be involved with, or talk to, parent.

**DISCORD:** Incapacity involving aggression, arguments, fights, or disruptive behavior.

**Does it affect how you along with your "parent"?**

*How?*

*What does s/he do about it?*

*What do you do?*

*Does it cause any arguments?*

*Can you tell me about the last time it did?*
