Alabama CSEPP Public Outreach Survey Final Report

July 20, 2009

Data Collected: April 22 – April 27, 2009

Prepared For

Mr. Steven Horwitz CSEPP Headquarters 500 C Street, SW Washington, DC 20472

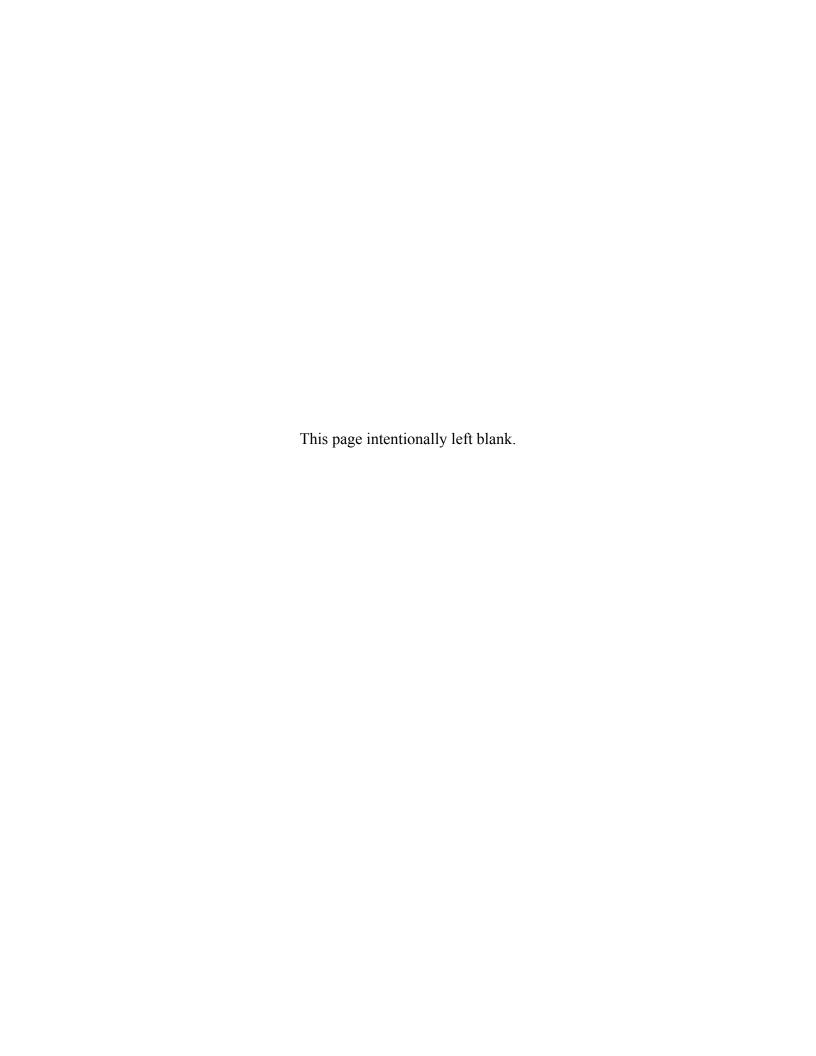

Prepared Under

Task Order: HSFEEM-09-J-0002

This document is for reference only. Readers should not construe this document as representing official FEMA policy or regulations.

This document was prepared for DHS/CSEPP by IEM, 8550 United Plaza Blvd., Suite 501, Baton Rouge, LA 70809.

IEM/TEC09-042

EXECUTIVE SUMMARY

The Anniston Chemical Stockpile Emergency Preparedness Program (CSEPP) uses telephone surveys to measure the effectiveness of its public outreach efforts. A survey was conducted April 22–27, 2009. There were 1008 residents sampled within the Anniston Emergency Planning Zones (EPZs). This survey was designed to ensure a margin of error of ± 3.4 percentage points with a 95% confidence level. This means that researchers are 95% confident that the true proportions for these survey questions are within ± 3.4 percentage points, at the most, of the reported proportions in this document. This executive summary presents the key results of the April 2009 survey.

In order to observe trends and note areas of improvement, as well as areas that still need improvement, results from the first survey (May 2004) are compared to the April 2009 survey results and have been highlighted in this report.

Survey responses in this report are also partitioned by county. The county-specific results in this report refer to the portion of the county within the Anniston EPZs. For this report, we will refer to residents residing in one of the following counties:

- Calhoun County
- Clay County
- Cleburne County
- Etowah County
- St. Clair County
- Talladega County

Key Findings

This section highlights key results of the April 2009 survey. All tabulated responses are provided in Appendix A: Survey Text and Tabulations and Appendix B: Anniston Emergency Planning Zone Cross Tabulations of this report.

Awareness

- Ninety-two percent of residents are aware of the chemical agents being disposed at the Anniston Army Depot.
- There is no significant difference between the counties in the level of awareness.
- This level of awareness has not changed statistically since May 2004 (95%).

Alert and Notification

The following responses indicate the level of trust among the public and how they expect to receive the alert and notification in the unlikely event of a chemical emergency.

- Eighty-four percent of residents are confident they would be notified quickly in the event of a chemical emergency. This number has increased significantly from 69% in May 2004; an increase of 15 percentage points.
- The top responses for all residents regarding how they expect to be alerted of a chemical emergency are siren/loudspeaker (51%), tone alert radio (TAR; 25%), television (17%), and AM/FM radio (10%).
- The percentage of residents who expect to be alerted of a chemical emergency via TAR increased from 17% to 25%, and by weather radios from 1% to 11% points. Similarly, when respondents were asked from where would they seek protective instructions, responses for TARs increased from 10% to 21%, and weather radios from 1% to 9%. This probably can be attributed to the TARs to emergency alert radios (EARs) project that enabled residents to receive free weather radios to replace previously distributed TARs.
- The top responses regarding how residents expect to receive emergency instructions during a chemical emergency are television (33%) and AM/FM radio (27%).

Protective Actions

- Seventy-six percent of residents agree they would be able to protect themselves and their family in the event of a chemical emergency. There has been a significant increase of 11 percentage points, when compared to the first survey conducted in May 2004 (65%).
- When asked what action they would take in the event of a chemical emergency, the top answer was "evacuate" by 48% of all EPZ residents.
- Twenty-six percent of the residents say they plan to shelter in place, the second-mostcommon response.

Shelter-in-Place

- Sixty-eight percent of the residents say they are confident they know how to shelter in place in the event of a chemical emergency. This figure has increased significantly by the margin of error from 61% in May 2004.
- The top responses to the actions EPZ residents intend to take when instructed to shelter in place is to close doors and windows (33%), seal doors and windows of shelter room (32%), and stay inside (18%).
- The top responses regarding how residents expect to be notified when it is safe to stop sheltering in place are AM/FM radio (26%), televison (24%), and TAR (19%).
- Twenty percent of the residents indicate they do not know how they would be notified when it is safe to stop sheltering in place.

Evacuate

■ The top responses to what actions residents would take if instructed to evacuate is to leave home or workplace (32%), evacuate in a specific direction (31%), evacuate using a specific route (20%) and evacuate toward a pre-planned destination (19%).

- Fifty-nine percent of residents have a pre-planned direction, route, and/or destination they would use in the event of an evacuation.
- Only 2% say they would not evacuate in the event of an evacuation.

Emergency Plans

- Forty-four percent of all residents say they have a family emergency plan. This is one area which has not made any significant improvements over the past years. However, significant improvements have been tracked for Cleburne County; from 49% in 2007, it has increased up to 63% in April 2009.
- Sixty-eight percent of all residents indicate that their local emergency management agency has given them information and materials that will help them make a family emergency plan.
- Almost all (96%) EPZ residents are familiar with the major roads and highways in their area and the majority of residents say they have an out-of-area telephone contact (74%) and have identified a room in their home for sheltering in place (73%).
- The percentage of residents who indicate they have the shelter-in-place kit is estimated to be 50%. This figure has increased significantly by the margin of error since May 2004 (40%). Similarly, the percentage of residents with disaster preparedness kit has also increased from 38% in May 2004 to 46% in April 2009.

School Preparedness (K-12)

- Twenty-three percent of all EPZ residents have children in local schools in grades K-12.
- Forty-eight percent of the parents are familiar with the emergency plan at their children's school. No significant change has been observed in the response to this question.
- Eighty-one percent of parents are confident that their children will be safe in the care of the school in the event of a chemical emergency. This has increased significantly from 70% in May 2004; an increase of 11 percentage points
- Fifty-seven percent of parents say they are likely to get their children from school during a chemical emergency. 45% of the parents are very likely and 12% are somewhat likely to get them. This number remains unchanged since the first survey in May 2004.

CSEPP Information

- Ninety-two percent of EPZ residents say that they have received some type of CSEPP information.
- The top response for all residents regarding how they have received CSEPP information is mail (64%).

Conclusions and Recommendations

The Anniston CSEPP public outreach program has matured over the last 5 years and has yielded significant improvements in several areas of public preparedness. There are some areas of improvement on current outreach efforts that would continue to promote public safety awareness and protection. According to the survey results and subsequent analysis, there are five priority areas that would benefit from additional outreach:

- 1. Family Emergency Plans
- 2. Shelter-in-Place
- 3. School CSEPP Education
- 4. Target Young Adults
- 5. Review Preparedness Information for New Residents

For a more detailed description of these conclusion and accompanying recommendations please see the Conclusions and Recommendations section of this report.

INTRODUCTION

This document contains the final analysis from the April 2009 Public Awareness Survey of the Chemical Stockpile Emergency Preparedness Program (CSEPP) site in Anniston, Alabama. This survey is part of a continuing effort to measure the effectiveness of the public outreach efforts in the emergency planning zones (EPZs) of the Anniston Army Depot. This survey was designed to measure the specific knowledge of protective actions and the level of preparedness of residents in the unlikely event of a chemical emergency at the Anniston Army Depot. Where applicable, historical data from previous telephone surveys conducted in 2004, 2006, 2007, and 2008 are included and compared with the 2009 survey results.

The annual CSEPP Public Awareness telephone survey is used to measure the success of outreach efforts of the Anniston Chemical Stockpile Emergency Preparedness Program community, which combine paid advertising with traditional outreach efforts, such as annual calendars and school programs. IEM continues to monitor the effectiveness of the survey and will suggest improvements to the survey questionnaire when applicable. This practice will ensure that site Public Information Officers (PIOs) continue to receive meaningful information from the residents within the EPZs surrounding the Anniston Army Depot.

This survey report contains the following sections:

- Methodology Describes the methodology that was used to design, conduct, and analyze the April 2009 survey
- Survey Results Describes the important survey results that were found in the analysis
- Recommendations Describes recommendations for public outreach based on the survey findings
- Appendices Provides tabulations and cross tabulations of the survey results

METHODOLOGY

Questionnaire Development

The National CSEPP Public Affairs Integrated Process Team (IPT) developed the core questions contained in the Alabama EPZ telephone survey. The Working Integrated Process Team (WIPT) and participating county emergency management agencies' (PIOs) were instrumental in the questionnaire design. IEM personnel assisted the community in developing site-specific questions. The result of this collaboration was a questionnaire that contained both National CSEPP Public Affairs IPT core questions and site-specific questions.

Conducting the Survey

To achieve a representative sample of adults living in the EPZs, respondents were randomly selected to participate in the survey. The Alabama CSEPP community would also like to be able to compare survey results across counties. The entire Anniston EPZ population was stratified by county and samples were drawn randomly from each county. Cleburne County was further stratified by the emergency zones. The sample size for each county was proportional to its true population. At least 30 respondents in each county category were desired in order to make valid statistical comparisons. Therefore, IEM over-sampled counties in the Anniston EPZ in which the proportional sample size was less than 30. The raw data from the April 2009 survey was weighted by county so that the sample proportions for each county are consistent with the true population proportions. For instance, there were 69 completed surveys in Clay County, which were weighed back to represent approximately 0.2% of the total sample. This is consistent with the fact that Clay County residents are approximately 0.2% of the EPZ population according to 2000 U.S. Census data.

Genesys Sampling Systems (Genesys) in Ft. Washington, Pennsylvania, generated the database of telephone numbers necessary for the completion of the surveys. The telephone numbers stratified by the zones in Cleburne County were provided by the county officials.

Calls were conducted in the early evening hours from Wednesday, April 22 to Monday, April 27. Only residents 18 years of age and older were allowed to participate in the survey. To ensure that the highest quality of work was performed, a quality assurance plan was implemented in this survey process that included revisions for increased call taker training, telephone monitoring by IEM, and extensive data quality control checks.

Survey Analysis

Margin of Error

In order to continue to track trends over time, the survey methodology remained the same as was used for the previous surveys conducted in 2004, 2006, 2007, and 2008. The Alabama April 2009 survey was designed to ensure a margin of error of ± 3.4 percentage

points with a 95% confidence level for the total sample percentages. This means that researchers are 95% confident that the true proportions for these survey questions are within ± 3.4 percentage points, at the most, of the reported proportions in this document. It is important to note that a difference of up to 7 percentage points does not imply that the difference is statistically significant. IEM performed further analyses to determine statistical significance as described in the following Logistic Regression section.

Logistic Regression

Logistic regression was used to analyze the relationship between subgroups of survey respondents (e.g., respondent has received CSEPP information, respondent belongs to a particular age group, etc.) and their responses to each of the survey questions.

All variables in the analysis were considered categorical variables and used as explanatory variables in the model. A difference of at least 7 percentage points was considered to be a meaningful difference," as decided by the sites and the CSEPP officials. Effects that were significant at the 0.05 level were then analyzed with linear contrasts to determine group differences. Results that were found to be statistically significant in the logistic regression analysis will be labeled as "significant" differences in this report.

Geography and Population

The region surrounding the Alabama CSEPP site is divided into EPZs. The EPZs are separated into the Immediate Response Zone (IRZ), which is the area closest to the Army installation, and the Protective Action Zone (PAZ), which is the area surrounding the IRZ. Figure 1 shows the EPZ and the proportion of the CSEPP population in each EPZ county.

Some survey responses in this report are partitioned by county. The county-specific results in this report refer to the portion of the county within the Alabama EPZs. For this report, we will refer to residents residing in one of the following counties:

- Calhoun County
- Clay County
- Cleburne County
- Etowah County
- St. Clair County
- Talladega County

Survey results were weighted to reflect the 2000 Census Bureau data population distribution within each county.

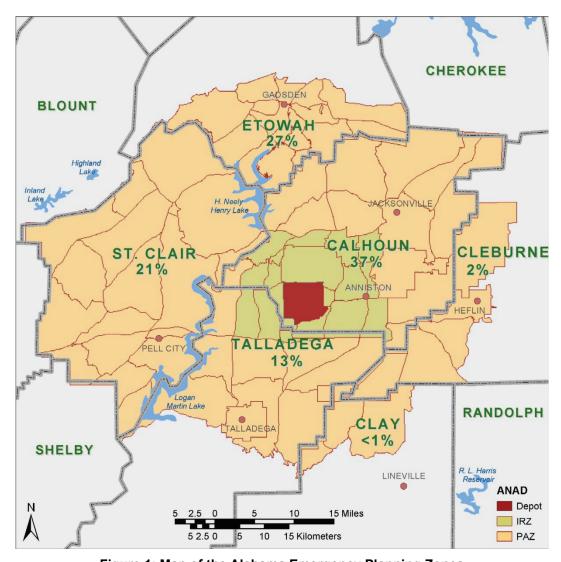

Figure 1: Map of the Alabama Emergency Planning Zones

Table 1 provides three columns of values for each county included in the survey. Column 2 (labeled Raw Frequency) refers to the actual number of surveys completed for each county. Column 3 (Raw Percentage) refers to the actual percentage of surveys completed for each subgroup. Column 4 (Weighted Percentage) is calculated by adjusting the sample proportions for each County-EPZ combination to be consistent with the population proportions according to the 2000 Census Bureau.

Table 1: County Breakdowns

Response	Raw Frequency ¹ April 2008	Raw Percentage ² April 2008	Weighted Percentage ³ April 2008
Calhoun County	310	31%	37%
Clay County	69	7%	<1%
Cleburne County	120	12%	2%
Etowah County	226	22%	27%
St. Clair County	175	17%	21%
Talladega County	108	11%	13%

¹ "Raw Frequency" refers to the actual number of surveys completed for each subgroup. ² "Raw Percentage" refers to the actual percentage of surveys completed for each subgroup.

³ "Weighted Percentage" is calculated by adjusting the sample proportions for county and emergency planning zones to be consistent with the true population proportions according to the 2000 United States Census Bureau.

SURVEY RESULTS

The analysis of the survey data has been constructed in a way to associate the change in public understanding over time to specific outreach efforts undertaken between survey intervals. These analyses provide a useful set of data for the Public Affairs IPT and local PIOs, who provide public education. The survey questions can be divided into groups based on general areas of concern such as awareness of chemical weapons, specific knowledge of protective actions, and so on as presented in Table 2. Improvements have been tracked over the course of the surveys and have been reported under each subsection in this report.

Table 2: Focus Areas

CSEPP Emergency Preparedness Focus Areas		
Awareness

Evacuation		
Shelter-in-place		
Family Emergency Plans		
School Preparedness		
CSEPP information		
Levels of Trust and Control		
-		

In this section, results from the general areas of concern such as awareness of chemical weapons, specific knowledge of protective actions, are provided in subsections. Under each subsection, answers to the survey questions pertaining to the addressed concern are provided. The responses are compared with historical data where applicable. Trends in the survey data highlight the progress made through public outreach over the course of several years. In order to observe trends and note areas of improvement, as well as areas that still need improvement, results from the first survey (May 2004) are compared to the most recent survey results (April 2009). The methodology to track improvement addresses the following questions:

- 1. Where were we before? (looking at the baseline survey data)
- 2. Where are we now? (comparing the current survey figures with the baseline data)

Cross tabulations and historical comparisons that were found to be statistically significant with a 95% confidence level in the logistic regression model are documented in this section. Responses specific to individual counties have also been presented following the response for the entire sample of residents. A complete list of the question wording,

tabulated responses, and applicable historical comparisons is available in Appendix A: Survey Text and Tabulations. Detailed cross tabulations are provided in Appendix B: Anniston Emergency Planning Zone Cross Tabulations.

Awareness of Chemical Agents

Respondents were asked the following question to assess the level of awareness among the residents of the chemical agents that are being destroyed at the Anniston Army Depot (ANAD).

Are you aware of the chemical agents that are being destroyed at the Anniston Army Depot? (Q1)

Figure 2 shows that 92% of residents living in the EPZ are aware of the chemical agents that are currently being destroyed at the Anniston Army Depot.

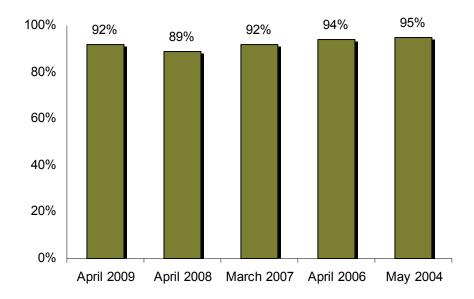

Figure 2: Percentage Aware of Chemical Agents

Trend Analysis

The level of awareness has not changed significantly since May 2004 (95%). However, the static nature of these numbers is due to the high level of awareness of chemical agents among the residents. Having met the initial goal of CSEPP public awareness, recent surveys show that the focus should now shift toward promoting specific preparedness actions. There is no significant difference between the counties when comparing the awareness levels of the residents.

Alert and Notification

In the event of a chemical emergency at the Anniston Army Depot, the public will be alerted of the emergency and receive emergency instructions through several sources. The following questions were asked to determine through which sources residents expect to receive the initial alert and how they expect further notifications after the alert.

The following are warning systems for the Alabama CSEPP community:

- The Emergency Alert System (EAS) on television and radio is available to residents in the immediate response zone (IRZ) and the protective action zone (PAZ).
- Sirens are distributed throughout the IRZ and in most parts of the PAZ.
- Tone alert radios (TAR) have been distributed in the IRZ and selected areas of the PAZ, including portions of Calhoun, Clay, and Talladega Counties.
- Route Alerting is available in the PAZ for specific emergency zones in Clay, St. Clair, and Talladega Counties.

The EAS channels provide the public multiple ways to obtain information from official sources. However, if segments of the public are not aware of these official channels, they may not receive alert and notification in a timely manner. The following questions were asked of respondents in order to determine how the public expects to receive the alert and notification in case of an emergency. Results also provide insight as to which segments of the public may require additional outreach in order to increase awareness of official channels.

How would you know if there were a chemical emergency at the Anniston Army Depot? (Q2)⁴

The most common source for the initial emergency alert is siren or loudspeaker with 51%. This is consistent with the previous years. Overall, 51% of residents responded "Siren/Loudspeaker" in 2009, which has significantly decreased from 66% in 2004. As shown in Figure 3, other top sources of alert include Tone Alert Radio (25%), Television (17%), and Weather radio (11%).

-

⁴ Multiple responses were accepted for this question.

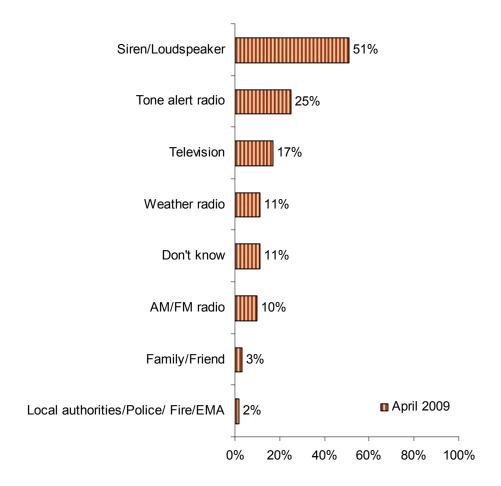

Figure 3: Sources of Emergency Alert

As illustrated in Figure 4, there have been increases up to 10 percentage points for weather radio, which is among the top responses to how residents expect to receive emergency alert.

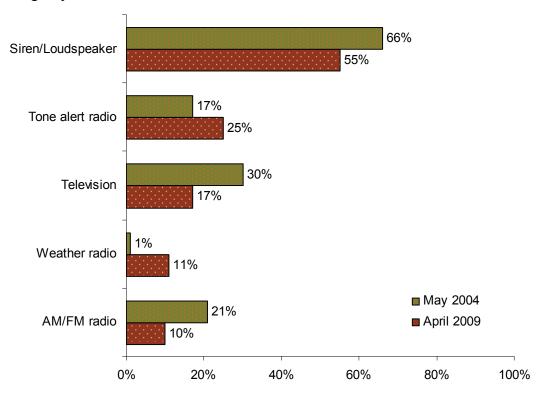

Figure 4: Observed Trends in Sources of Emergency Alert

If a chemical accident occurred at the Anniston Army Depot, from where would you get instructions on how to protect yourself and your family when you hear the warning signals? (Q8)⁵

Figure 5 shows that Television/News (33%) and AM/FM Radio (27%) remain the top two sources through which residents expect to receive further notification during a chemical emergency.

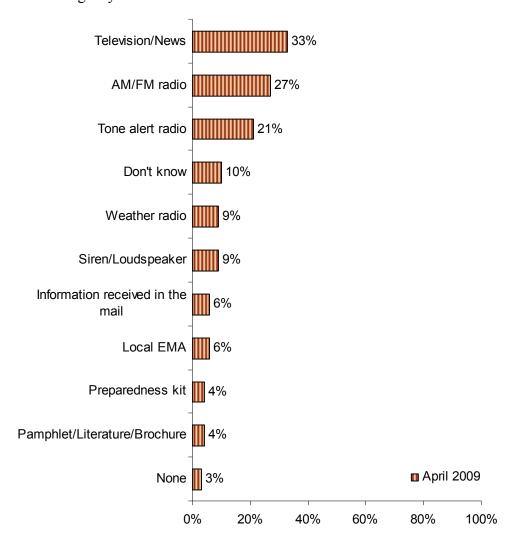

Figure 5: Sources of Additional Emergency Instructions

-

⁵ Multiple responses were accepted for this question.

An estimated 10% of residents responded "I don't know;" this figure has decreased significantly from 22% in May 2004. Figure 6 compares expected sources of notification among residents across the years. In April 2009, TARs and weather radios are noticeably more favored for both alerts and notification when compared with May 2004 figures.

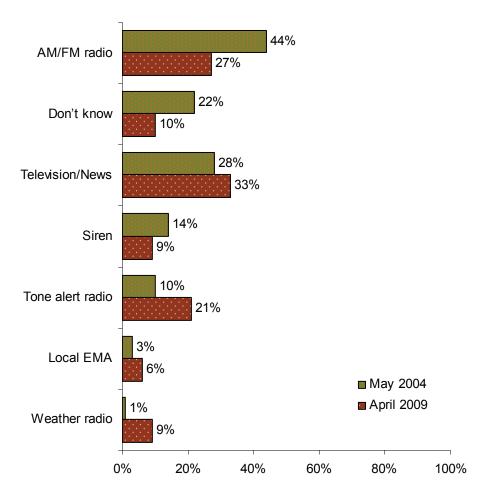

Figure 6: Observed Trends in Sources of Additional Emergency Instructions

Trend Analysis

While most responses are similar when compared to the May 2004 survey numbers, there are changes regarding tone alert radios (TARs) and weather radios. This probably can be attributed to the TARs to emergency alert radios (EARs) project that enabled residents to receive free weather radios to replace previously distributed TARs. The percentage of residents who expect to be alerted of a chemical emergency via TAR increased from 17% to 25%, and by weather radios from 1% to 11% points. While siren/loudspeaker remains the number one response for a chemical emergency alert, this is the first time TARs have replaced the number two response (Television) as the second choice for receiving an alert. Similarly, when respondents were asked from where they would seek protective

instructions, responses for TARs increased from 10% to 21%, and weather radios from 1% to 9%.

It appears that the radio changeover media campaign was successful on many fronts, including prompting residents to recall alert and notification capabilities. An estimated 10% of the residents still indicate that they are not aware of the sources through which they would be notified during an emergency. However, this figure has decreased significantly from 22% in May 2004.

Emergency Plans

Do you or your family have an emergency plan? (Q9)

As shown in Figure 7, overall 44% of the residents say they have an emergency plan. Compared with May 2004 there is slight increase however not statistically significant.

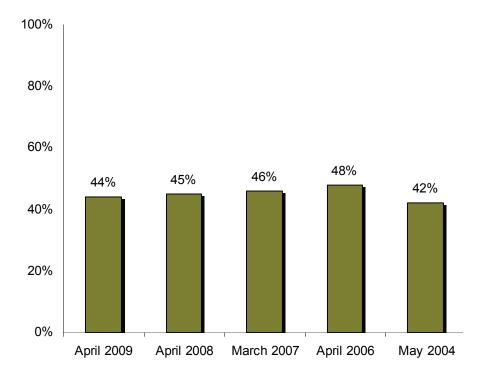

Figure 7: Families who have Emergency Plans

Figure 8 illustrates estimates of the proportion of residents in each county who indicate they have an emergency plan in the event of a chemical emergency.

• In Cleburne County, 63% of the residents have an emergency plan, whereas 37% of the St. Clair County residents have a chemical emergency plan.

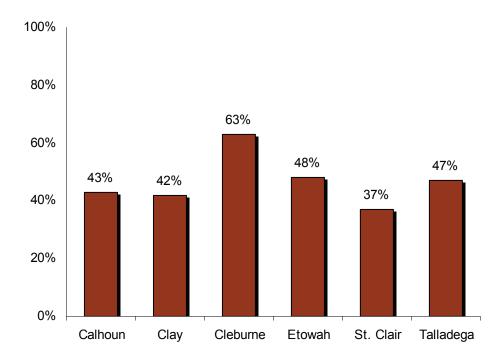

Figure 8: Families who have Emergency Plans by County

Has your local emergency management agency given you the information and materials you would need to make a family emergency plan? (Q10)

Overall, as shown in Figure 9, approximately 68% of the residents have received information from their local emergency management to assist them in developing a family emergency plan. The number of residents that say they received information and materials has decreased by 5 percentages points since May 2004. This decrease is not statistically significant.

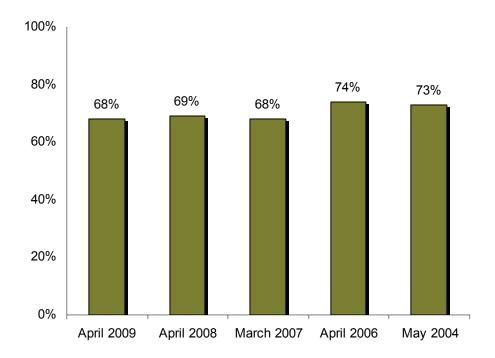

Figure 9: Residents who Received Instructions to Make a Family Emergency Plan

Figure 10 provides the estimated proportions of residents in different counties who have received information from their local emergency management agencies to assist them in developing a family emergency plan. An estimated 85% of residents in Cleburne County and 75% of the Clay County residents have received emergency planning materials.

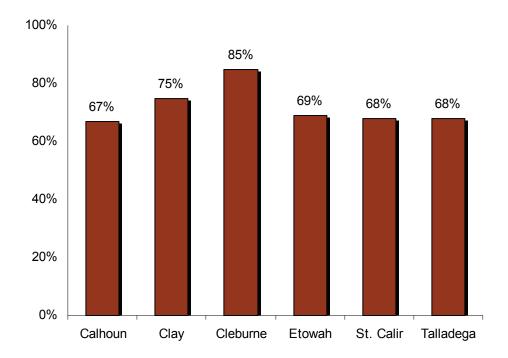

Figure 10: Residents who Received Instructions to Make Family Emergency Plan by County

Please answer "yes" or "no" to the following questions: (Q11)

- 11a. Are you familiar with the names of the major roads and highways in your area?
- 11b. In the event of an emergency, do you have a family meeting place?
- 11c. Do you have an out-of-area telephone contact?
- 11d. Do you have a disaster preparedness kit (emergency supplies such as food, water, medications, first aid supplies, flashlight, and battery-operated radio)?
- 11e. Do you have a shelter-in-place kit with tape, plastic, and instructions?
- 11f. Have you identified a room in your home that you would use for sheltering-inplace?

Several follow-up questions were asked to measure if Alabama EPZ residents have taken specific steps to prepare a complete family emergency plan (Q11). Figure 11 provides a summary of residents who have particular components that contribute to a complete emergency plan. There were also county-specific questions that were asked regarding emergency plan components. Those results are provided in the County-Specific Results section of this report.

The proportion of residents that have identified a room at home/work for sheltering-in-place has increased from 67% in 2007to 73%,

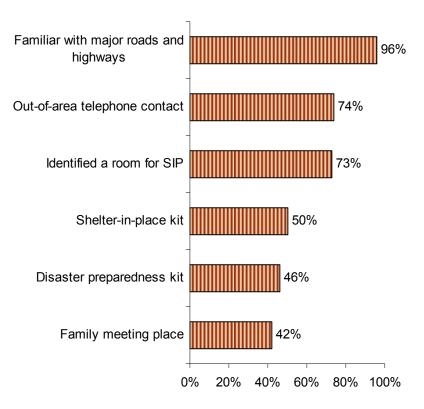

Figure 11: Residents with Emergency Plan Components

Figure 12 compares the percentage of residents with emergency plan components for the current survey with the baseline survey conducted in May 2004. The percentage of residents who indicate they have the shelter-in-place kit is estimated to be 50%. This figure has increased significantly by the margin of error since May 2004 (40%). Similarly, the percentage of residents with disaster preparedness kit has also increased from 38% in May 2004 to 46% in April 2009.

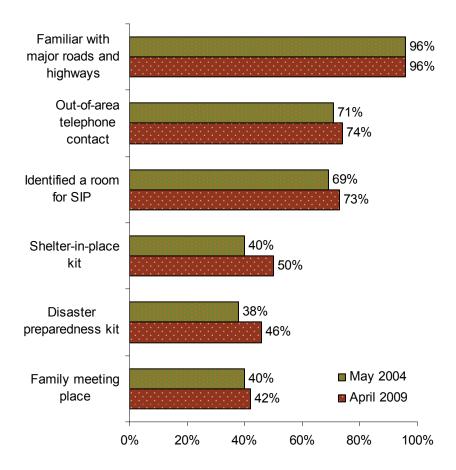

Figure 12: Residents with Emergency Plan Components

Trend Analysis

As stated in the April 2008 report, "Family Emergency Planning" is one area that has remained static for the site since May 2004. However, significant improvements have been tracked for Cleburne County. The percentage of residents in Cleburne County who indicated they have a family emergency plan rose from 49% in 2007 to 60% in 2008 and further to 63% in 2009.

As per the site's request at the August 2008 IPT meeting, IEM researched on the available national figures for measuring preparedness level. The national average reporting the percentage of residents with a family emergency plan, for any kind of emergency, is around 20%. Similar to the CSEPP surveys, Nuclear Regulatory Commission (NRC) conducted a national telephone survey of residents living within Nuclear Power Plant (NPP) Emergency Planning Zones (EPZs) to evaluate public's awareness of radiological emergency notification methods, sources of information during an emergency if one were to take place, and willingness and ability to follow recommended protective actions at the NPP sites. Consistent with national figures, the NRC survey estimates nearly 20% of the residents to be prepared with a family emergency plan for a radiological emergency.

Based on these findings, it appears that the percentage of residents with a family emergency plan is significantly higher at the CSEPP sites. It is recommended that outreach education continues to include information on the basic components of a family emergency plan, with an emphasis on the components that need the most improvement.

Protective Actions

Some of the questions were designed to assess the degree to which citizens in the IRZ and PAZ around the Anniston CSEPP site are knowledgeable about the actions they should take in the event of a chemical emergency at their site, and how prepared they are to act appropriately should an event occur. These questions were also designed to see if residents would conform to the instructions provided by the local emergency management agency in the unlikely event of a chemical emergency.

What actions would you take if you found out there was a chemical emergency at the Anniston Army Depot? (Q3)

EPZ residents were asked to assess which actions they would take if they found out there was a chemical emergency. They were allowed to give multiple responses.⁶ The top responses to this question have been illustrated in Figure 13.

- As seen in previous surveys, a large amount of residents (48%) indicated that they would evacuate.
- 15% of the residents would wait for instructions to evacuate or shelter-in-place

-

⁶ Because respondents were allowed to give multiple answers, totals do not equal 100%.

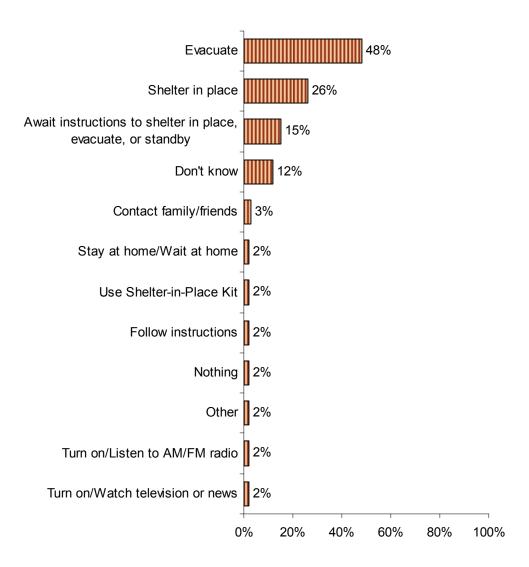

Figure 13: Actions Taken in the Event of a Chemical Emergency

Figure 14 compares the most common actions residents would take in the event of a chemical emergency for the baseline survey (May 2004) and the current survey.

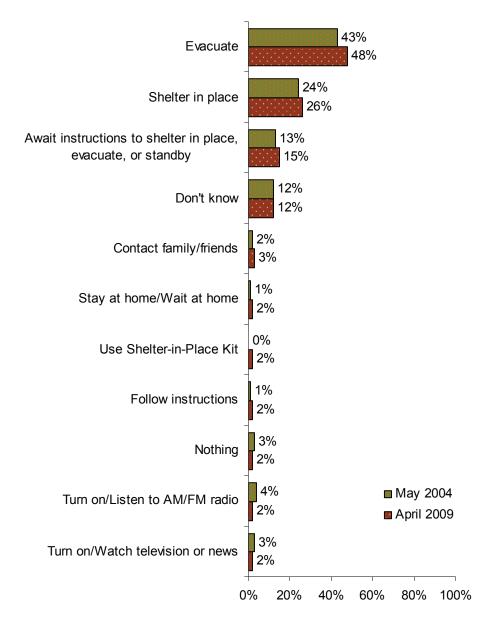

Figure 14: Actions Take in the Event of an Emergency over the years

Shelter-in-Place

Sheltering-in-place is composed of a series of actions taken to make a structure safe from chemical exposure. As a protective action, sheltering in place allows people in immediate danger to protect themselves and their families quickly in their given location.

How confident are you that you know how to shelter in place in the event of a chemical emergency? (Q14)

Figure 15 shows that 68% of all residents in April 2009 indicate they are confident that they can shelter in place properly. This number has increased significantly by the margin of error since the first survey in May 2004.

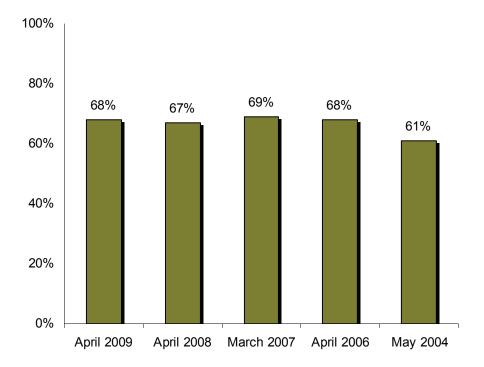

Figure 15: Confident in Ability to Shelter in Place

Figure 16 illustrates the percentage of residents who are confident they can shelter in place by county. Cleburne and Clay Counties have the highest percentage of residents confident they can shelter in place at 83% and 72% respectively.

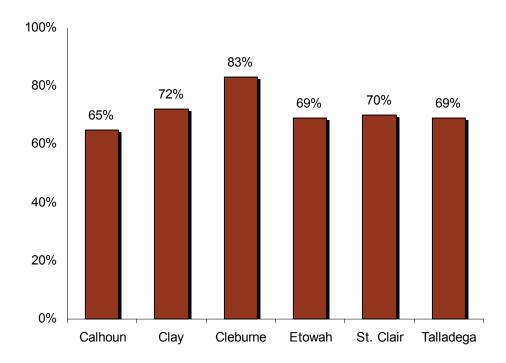

Figure 16: Confident in Ability to Shelter in Place by County

If you were instructed to shelter in place, what actions would you take? (Q4)

Figure 17 illustrates the most common actions respondents will take if they were instructed to shelter in place. Close doors and windows (33%) and Seal doors and windows (32%) are the top responses.

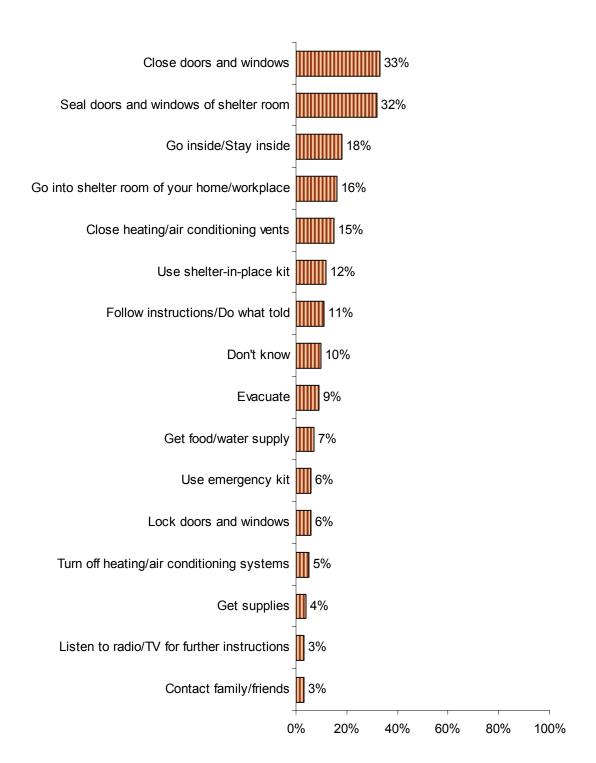

Figure 17: Actions Take when Instructed to Shelter in Place

Shelter-in-Place (SIP) Steps

The survey sought to identify and summarize which actions residents would take if instructed to shelter in place. Sheltering-in-place is composed of a series of actions taken to make a structure safe from chemical exposure. To determine the level of knowledge of residents regarding shelter-in-place, it is important to identify which combination of shelter-in-place actions are necessary in order to shelter in place safely.

- Step 1: Stay inside, or go inside if you are outside.
- Step 2: Close all windows, fireplace dampers, and doors outside and inside.
- Step 3: Turn off heating, cooling, and ventilation systems.
- Step 4: Stay in an interior room or room with no windows.
- Step 5: Turn radio to EAS stations for instructions.

Table 3 shows the percentage of survey respondents who indicate they would take shelter-in-place steps 1–5.

The percentage of survey respondents who indicated they would take each step is provided in the column labeled "Percentage of Total Sample." The second column of percentages labeled "Percentage of Respondents Taking Cumulative Steps" shows the percentage of survey respondents who indicated they would take that shelter-in-place step along with all previous steps. For example, 15% of survey respondents said they would take steps 1, 2, and 3.

Table 3: Shelter-in-Place Steps

Shelter-in-Place Steps	Percentage of Total Sample	Percentage of Respondents Taking Cumulative Steps
Step 1: Stay inside, or go inside if you are outside	53%	53%
Step 2: Close all windows, fireplace dampers and doors outside and inside	57%	38%
Step 3: Turn off heating, cooling and ventilation systems	18%	15%
Step 4: Stay in an interior room or room with no windows	26%	4%
Step 5: Turn radio to EAS stations for instructions	15%	1%

Figure 18 compares the percentage of residents who would take each of the shelter-inplace steps in April 2006 and April 2009. This graph clearly indicates that there has been a significant decrease in the number of residents taking Step 3 and Step 4.

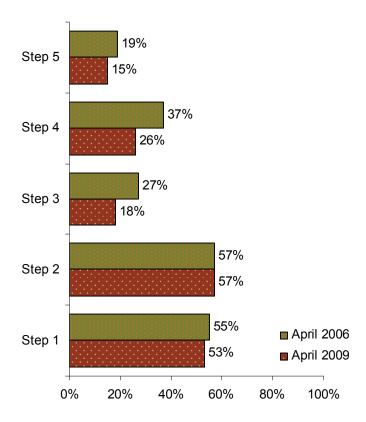

Figure 18: Percentage of Residents who would take each Shelter-in-Place step

How would you know it would be safe to stop sheltering in place? (Q5)

Figure 19 shows that while AM/FM remains the most common source through which residents will know to stop sheltering in place, it has decreased from 44% in 2004 to 26% in 2009. Also, responses for TARs and Weather radio have increased significantly this year compared to may 2004.

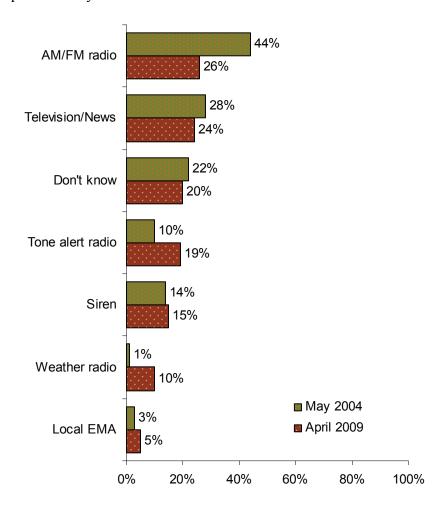

Figure 19: Notification to Stop Sheltering in Place

Evacuate

In the event of a chemical emergency at the depot, residents may be instructed to evacuate. During an evacuation, residents would be instructed to immediately leave their home or workplace toward the appropriate evacuation route or drive to the appropriate reception center.

If you were instructed to evacuate, what actions would you take? (Q6)

Figure 20 illustrates that three of the most common answers, evacuate in certain direction (31%), evacuate using a specific route (20%), and evacuate to a specific destination (19%), have all experienced increases compared to 2004. A more general response of "Leave home/Get out of town/Get in car" decreased 44 percentage points to 32% in the 2009 survey.

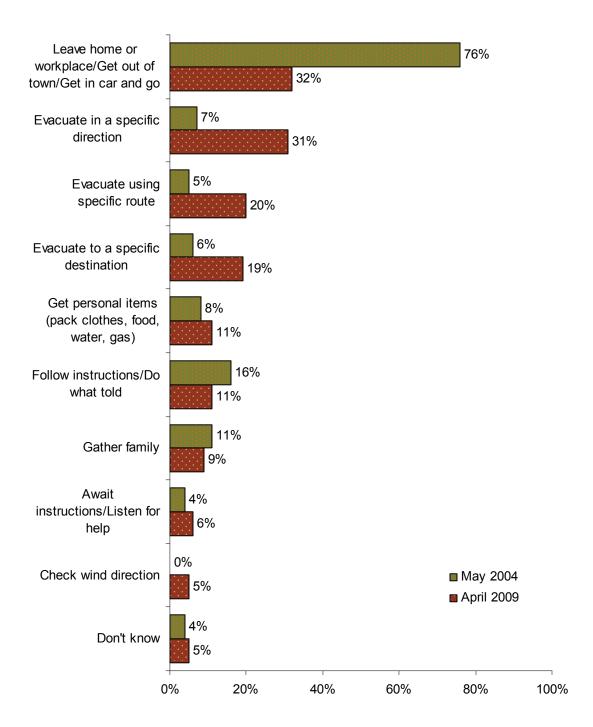

Figure 20: Actions Taken in an Evacuation

Trend Analysis

The percentage of residents who indicate that they do not have any pre-planned direction, route, or destination in the event of an evacuation is high. In the current survey, the estimated number is approximately 35%, which is consistent with previous years. However, it is encouraging to note that respondents are giving more specific answers on the recent surveys in terms of what actions they intend to take compared to the May 2004

data. The decreases in the general responses have been significantly high and it appears that the public do have knowledge of proper evacuation procedures in order to help expedite the process and increase their chance of safety. Only an estimated 1% of the residents are aware of all the steps needed to shelter in place appropriately. This figure is alarming and should be considered while preparing for future outreach effort.

School Preparedness

To assess parents' knowledge and compliance with school chemical emergency plans, they were asked questions regarding their familiarity with their children's school chemical emergency plan, the level of confidence they have in the school's ability to keep their children safe during a chemical emergency, and their likelihood of them trying to pick up their children from school in the event of a chemical emergency.

Do you have children in a local school in grades K-12? (Q15)

It was estimated that about 23% of residents have children who attend local schools in April 2009. It has been illustrated in Figure 21. This has been consistent with previous years.

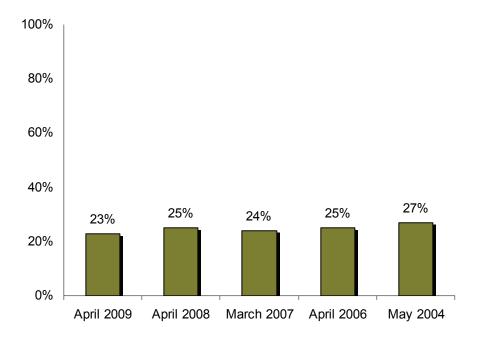

Figure 21: Respondents with Children in Local Schools (K-12)

Are you familiar with the emergency plan at your child(ren)'s school(s)? (Q17)

Figure 22 shows approximately 48% of parents are familiar with the emergency plan at their children's schools.

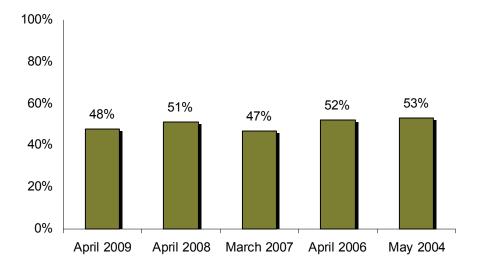

Figure 22: Parents Familiar with the Emergency Plan at their Child(ren)'s School

In Clay County, 73% of the parents indicate that they are familiar with the emergency plan at their children's school, whereas only 39% of the Talladega County parents say so. This has been depicted in Figure 23.

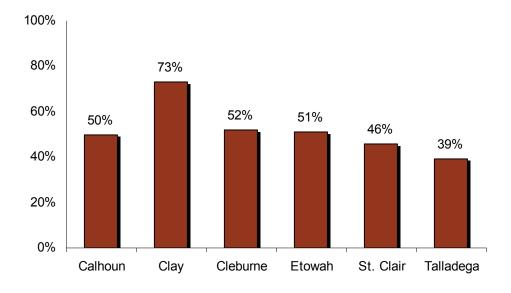

Figure 23: Parents Familiar with the Emergency Plan at their Child(ren)'s School by County

How confident are you that your child/children would be safe in the care of their school(s) in the event of a chemical emergency at the Anniston Army Depot? (Q18)

According to the April 2009 survey, 81% of parents said they are confident that their children would be safe in the care of their schools in the event of a chemical emergency at the depot. Figure 24 illustrates that this figure has increased significantly from 70% in 2004.

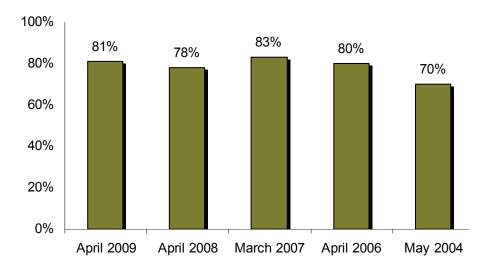

Figure 24: Parents' Confidence in Child(ren)'s Safety at School

Figure 25 shows the level of parents' confidence in their children's safety at school by county. All the counties have notably improved this percentage since the past surveys.

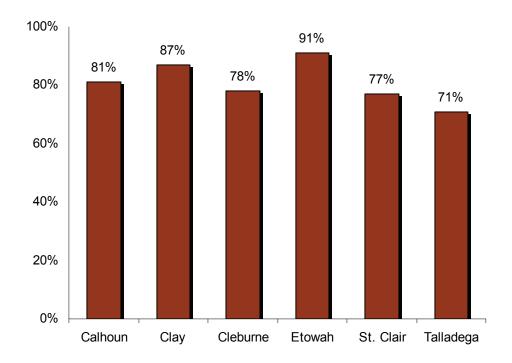

Figure 25: Parents' Confidence with Child(ren)'s Safety at School by County

In the event of a severe weather or tornado warning are you likely or unlikely to go to the school to get your child/children? (Q19)

Figure 26 illustrates parents' likelihood of picking up their children from school in the event of a severe weather or tornado warning. Nearly half of the parents surveyed are likely to pick up their kids in the case of severe weather.

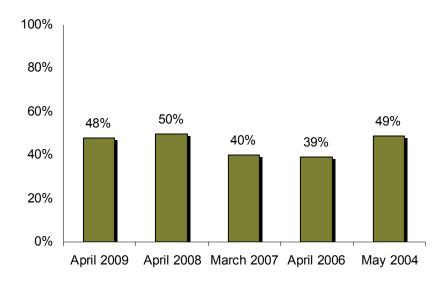

Figure 26: Parents' Likelihood of Getting their Children from School in Case of a Severe Weather or Tornado Warning

In the event of a chemical emergency at the Anniston Army Depot, are you likely or unlikely to go to the school to get your child/children? (Q20)

Figure 27 shows that 57% of parents are likely to pick up their kid, which has remained the same since May 2004.

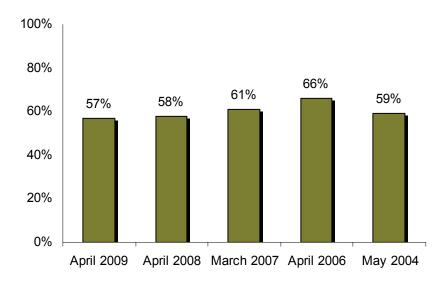

Figure 27: Parents' Likelihood of Getting their Children from School in Case of a Chemical Emergency

Figure 28 illustrates the proportion of parents' who will likely pick up their children from school in the event of a chemical emergency at the ANAD by county. Fewer parents in Calhoun County are likely to go to get their children from school compared to the other counties.

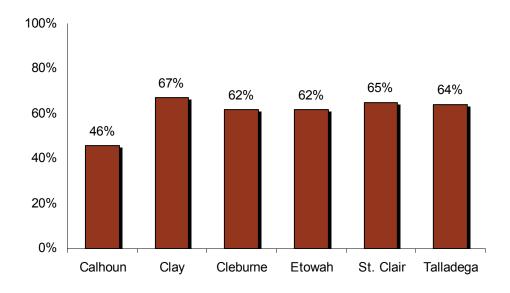

Figure 28: Parents' Likelihood to get their Child(ren) from School in Case of a Chemical Emergency at the ANAD by County

Would you pick up your child(ren) immediately or when notified that it is safe to do so? (Q20b)

Only parents who said they are somewhat likely or very likely to pick up their children from school were asked this question in all counties except Clay County. This question further clarifies when parents intend to pick up their children during an emergency.

As depicted in Figure 29, 65% of parents who are likely to pick up their kids from school in the event of a chemical emergency would do so immediately. This figure has increased by 14 percentage points since April 2006.

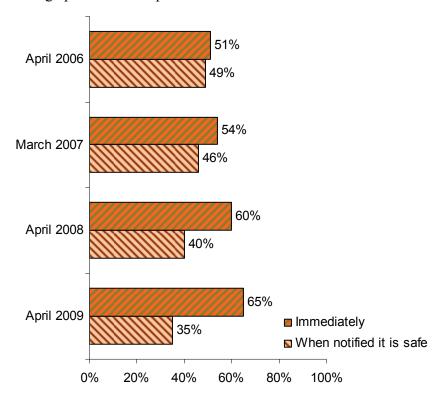

Figure 29: When are Parents Likely to get their Child(ren) from School in Case of a Chemical Emergency

Why are you likely/unlikely to get your child/children from school in the event of a chemical emergency? (Q21)

The 57% of parents who said they are likely to pick up their children from school during a chemical emergency were asked to clarify why they were likely to do so. See Figure 30 for results.

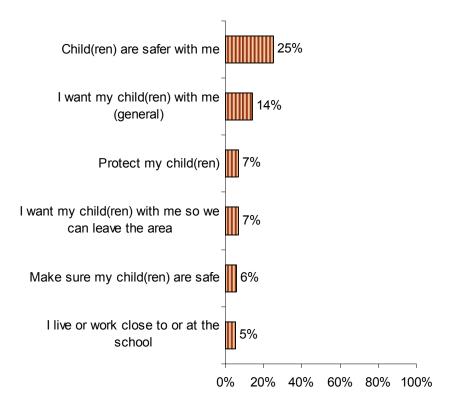

Figure 30: Reasons Parents are Likely to get their Child(ren) from School in Case of a Chemical Emergency

As with previous survey results, the most common response from parents is that "My children are safer with me." The proportion of parents who stated this reason has increased from 15% in 2004 to 25% in 2009, which is a significant change. Figure 31 compares the responses across the two years (May 2004 vs. April 2009).

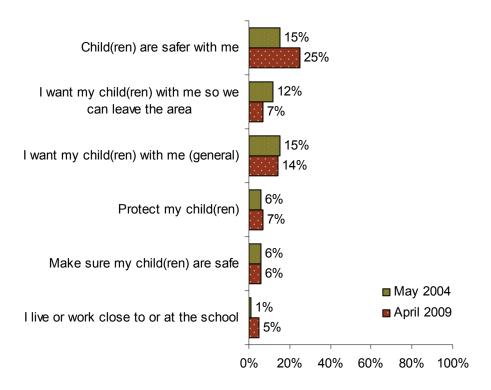

Figure 31: Reasons Parents are Unlikely to get their Child(ren) from School in Case of a Chemical Emergency

Trend Analysis

A common trend in survey results is that while the majority of parents are confident their children are safe at school, they indicate they are likely to pick up their children from school in the event of a chemical emergency. Although the percentage of parents who are confident that the school can take care of their children in a chemical emergency has increased significantly from 70% in May 2004 to 81% in April 2009, there are still parents who plan to pick up their children right away. There has also been a significant increase in the percentage of parents who are likely to pick up their kids immediately from school. More and more parents feel that their child will be safer with them.

CSEPP Information

An important item that the local communities may want to consider is the degree of public recall regarding CSEPP information sources. One way to estimate the extent to which this is the case is to ask the public directly what they recall regarding protective actions and where and when they heard or saw this message. This would provide an indirect but valuable source of feedback for the PIOs regarding the effectiveness of different types of messages and media outlets. Alabama public information officers have targeted their audience through channels such as an annual preparedness calendar, brochures, and a Web site containing specific preparedness information. The following questions were designed to identify sources that are reaching residents and media sources where EPZ residents are currently obtaining information in general.

Actual Sources

The following section includes a series of questions that identify where and when residents have received CSEPP information.

When was the last time you heard, saw, or read any information about how to prepare for a chemical emergency? (Q25)

Figure 32 shows that overall 92% of residents surveyed have received CSEPP emergency preparedness information. Further, 39% have received CSEPP information within the past year. The proportion of residents that have received CSEPP information has remained high over the course of the surveys, and has not significantly changed since 2004.

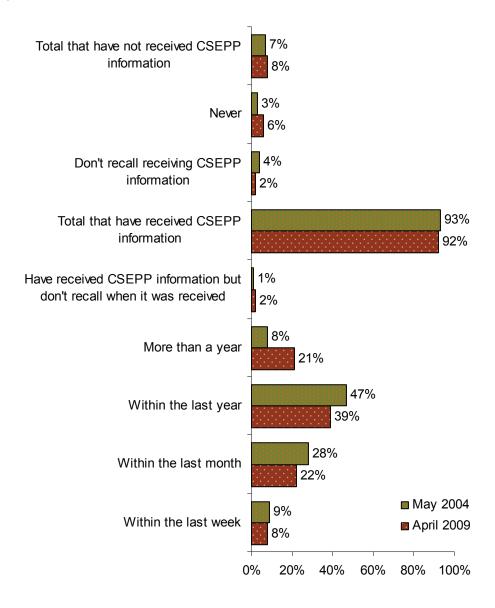

Figure 32: Received Emergency Preparedness Information

There is no statistical significant difference among the counties' residents that say they have received CSEPP information (89%–96%). This is graphically shown in Figure 33.

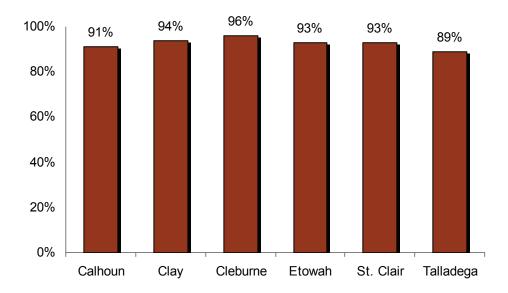

Figure 33: Received Emergency Preparedness Information by County

How have you received information about how to prepare for a chemical emergency? (Q26)

Figure 34 illustrates how residents have received CSEPP information. Only respondents who indicated they have received CSEPP information were asked this question. The majority of residents (64%) indicate that they have received CSEPP information in the mail. This has been the most common source of information since 2004. Other top sources are television (12%) and newspaper (10%).

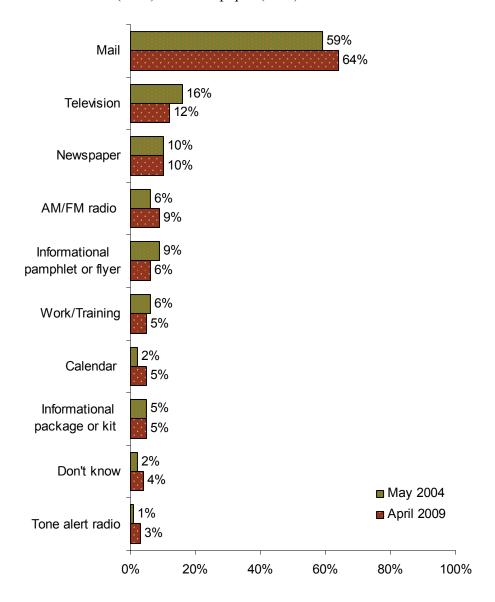

Figure 34: Sources by which Residents have Received Emergency Preparedness Information

What information do you recall from what you heard, saw, or read? (Q27)

Figure 35 illustrates the content that residents recall from CSEPP information that they have received. The April 2009 results have been compared with the May 2004 figures. Only residents that have received CSEPP information were asked this question.

Information on sheltering in place tops the list. Responses related to evacuation, such as evacuation route, evacuation plan, and evacuation directions, are among the top answers. Overall, there have been no significant changes in the response percentages for the different categories. More residents indicate that they do not remember what information was provided to them in April 2009 when compared to May 2004 numbers.

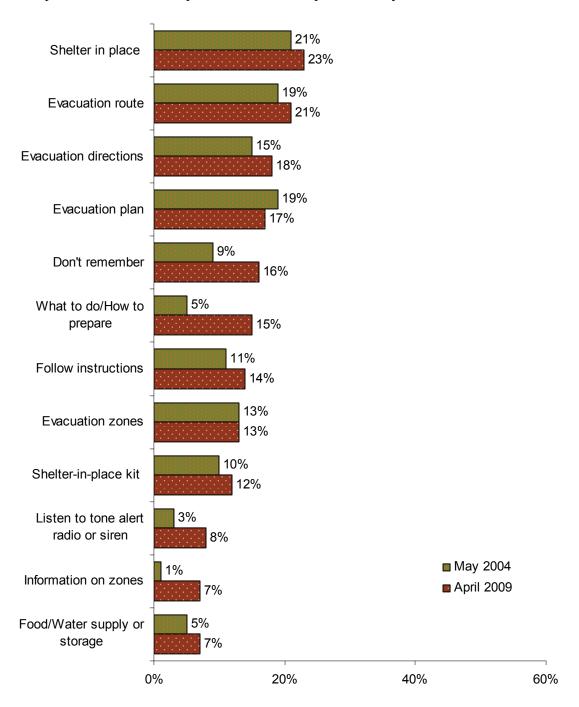

Figure 35: Information Residents Recall from What They Received on Emergency Preparedness

Media Outlets

Residents were asked to select from a list of activities those they spent time doing during a typical week. Further, they were also asked to specify the name of the radio stations and television channels they listened/watched the most to identify effective media outlets for future outreach.

I am going to read to you a list of activities. Please tell me if you do each activity during a typical week? (Q22)

Figure 36 depicts the percentages of residents who do a particular activity during a week. These questions were limited to residents in Clay, Cleburne, Etowah, St. Clair, and Talladega Counties. Respondents were given the option to select multiple categories; hence, the total will not sum up to 100%. Majority of the residents indicate that they watch some form of television, be it a local television station (92%) or a cable or satellite television station (92%). The second most common responses, at 90%, are read information received in the mail

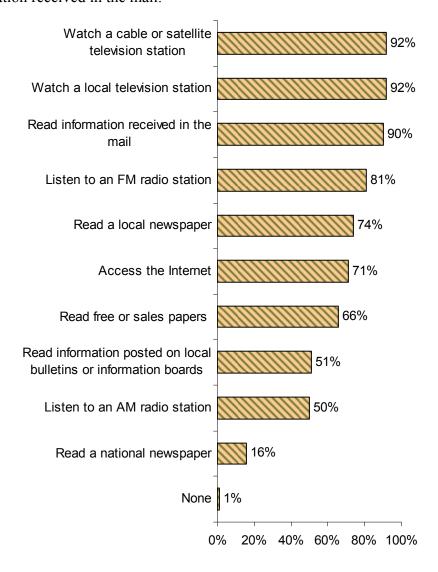

Figure 36: Time Spent Using Media Outlets during a Typical Week

Of the activities you just mentioned, which do you spend the most time doing? (Q23)

Respondents were asked to specify which activity they spend most of the time doing. This question was asked in all the counties except Calhoun County. Figure 37 indicates that the top responses are watching television, local (36%) and cable or satellite (26%).

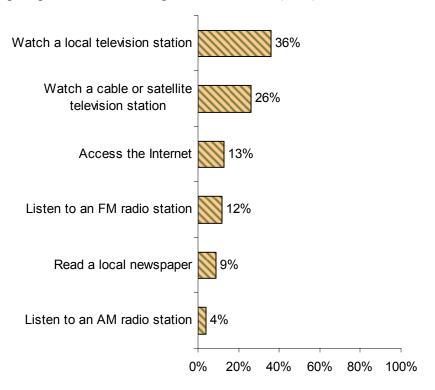

Figure 37: Time Spent (Most of the Time) Using Media Outlets during a Typical Week

Survey respondents were asked follow-up questions corresponding to their activity they spend time doing during a week. These questions have not been compared to the May 2004 survey.⁷

_

⁷ In May 2004 these questions were asked only from those respondents who indicated that they spend most of their time doing a particular activity. In April 2006, it is asked of all respondents who do that activity in a typical week, not necessarily most of the time.

What radio station do you listen to the most? (Q24)

Respondents who mentioned that they do listen to a radio station in Question 22 were asked this question. Figure 38 gives the most common radio stations respondents listen to.

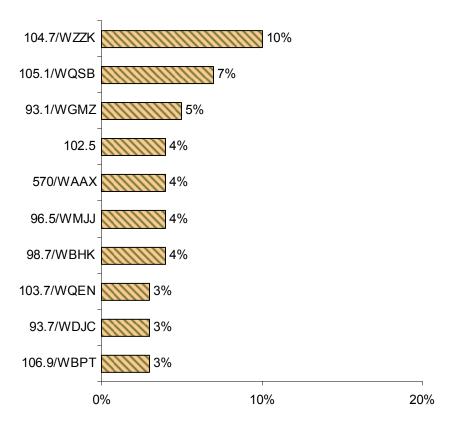

Figure 38: Respondents Who Listen to a Radio Station

What television station do you watch the most? (Q24b)

Respondents who indicated they watched local or cable television in Question 22 were asked this question. The most common television stations that residents watch are illustrated in Figure 39

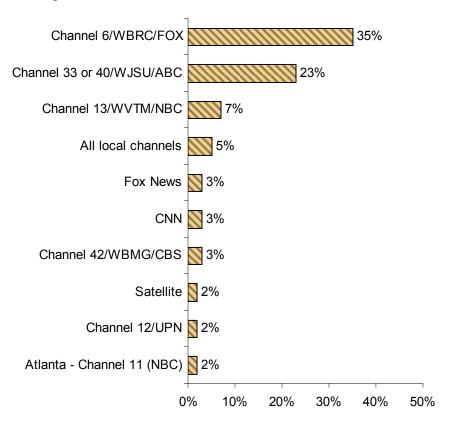

Figure 39: Television Stations Watched by Respondents

What newspaper do you read the most? (Q24c)

Respondents who indicated they read a local or national newspaper in Question 22 were asked this question. Figure 40shows the most commonly read newspapers among the EPZ residents.

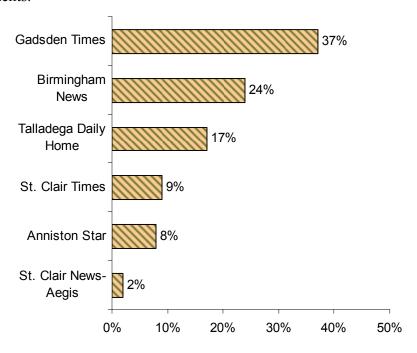

Figure 40: Newspapers Ready by Respondents

Significant Findings

As in past surveys, the analysis found many significant differences between the residents who say they have received chemical preparedness or CSEPP information and those who say they have not.

- Residents who received CSEPP information are more confident that they know how to shelter in place (70%) than residents who claimed that they did not receive CSEPP information (41%).
- Residents who have not received CSEPP information are more likely to go to the school to pick up their child(ren) in the event of a chemical emergency (89%) compared with those who have received CSEPP information (55%).
- Forty-seven percent of the residents who received CSEPP information do have an emergency plan as opposed to 14% of residents who did not receive CSEPP information
- Residents who received CSEPP information are more likely to have identified a shelter room to be used for sheltering-in-place (74%) compared to those who have not received CSEPP information (55%).
- Residents who received CSEPP information are more likely to have a family meeting place in the event of an emergency (44%) compared to those who have not received CSEPP information (24%).

- Residents who received CSEPP information are more likely to have a preparedness kit for use in the event of an emergency (48%) compared to those who have not received CSEPP information (24%).
- Residents who received CSEPP information are more likely to have a shelter-in-place kit for use in the event of an emergency (53%) compared to those who have not received CSEPP information (17%).
- Residents who have not received CSEPP information are more likely to not know what actions they would take in the event of a chemical emergency (30%) than people who have received CSEPP information (11%).

These results clearly indicate that residents who have received CSEPP information are better prepared for an emergency situation.

Trust and Control

Through research of case studies which span several decades, IEM has identified two principal strategies for helping residents living near a potentially hazardous facility prepare to properly protect them in case an emergency occurs at that facility:

- 1. Provide the public with a sense of control.
- 2. Enhance the public's trust in the management and personnel of the emergency preparedness program.

Two survey questions were used to evaluate the levels of trust and control present in residents living in the Alabama CSEPP EPZ. The next two subsections present the survey results for these questions.

Trust

While the content, structure, and delivery of the warning message is important, the degree of trust between officials and the public prior to an emergency may be a significant factor in shaping the social context within which a response takes place. The extent to which people trust the source of a message may influence how they respond. To assess the residents' level of trust in emergency personnel, they were asked the following question:

How confident are you that the public will be notified quickly in case of a chemical emergency at the Anniston Army Depot? (Q28)

As in previous surveys, most EPZ residents (84%) feel that the public will be notified quickly in case of a chemical emergency at the Anniston Army Depot. Figure 41 shows there has been a significant increase of 15 percentage points since May 2004.

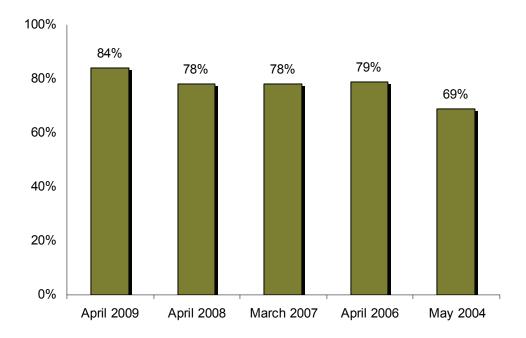

Figure 41: Confident in the Public being Notified Quickly of a Chemical Emergency

Fewer Calhoun County residents are confident that the public will be notified quickly in case of a chemical emergency at the Anniston Army Depot (76%), when compared with the residents of other counties. The percentages for the different counties are shown in Figure 42.

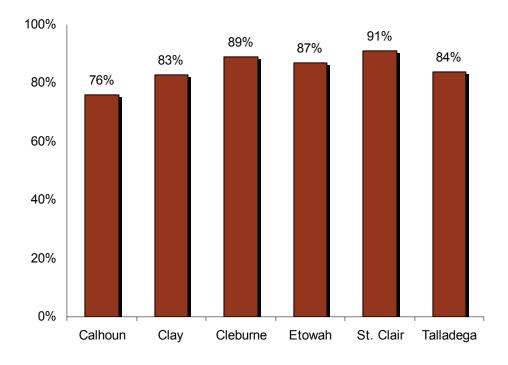

Figure 42: Confidence in the Public being Notified Quickly of a Chemical Emergency by County

Residents were asked to clarify why they were or were not confident that they would be notified quickly. Residents gave a variety of reasons for their level of confidence. A detailed list of the responses to this question is provided in Appendix A: Survey Text and Tabulations.

Figure 43 illustrates the most common explanations of residents are confident they will be notified quickly. The percentages shown in Figure 43 are out of the total sample of survey respondents. Note that the top responses are trust in the alert system and the Anniston Army Depot.

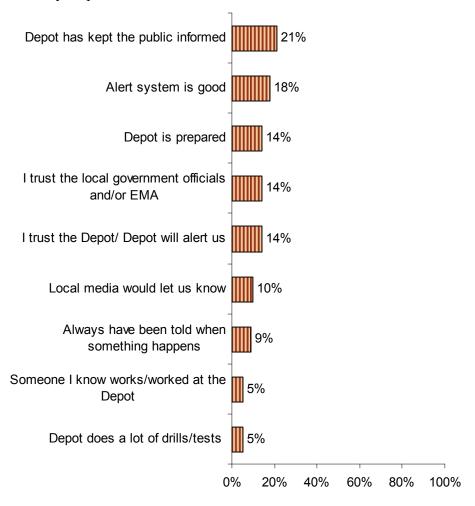

Figure 43: Reasons Residents are Confident that the Public will be Notified Quickly in Case of a Chemical Emergency

Figure 44 compares the responses to this question for the two years (April 2009 vs. May 2004). It is encouraging to note that the respondents are showing greater confidence in the depot personnel in the recent years compared to that in May 2004.

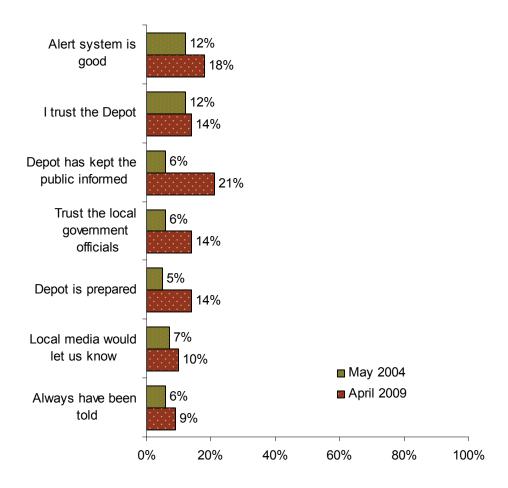

Figure 44: Reasons Residents are Confident that the Public will be Notified Quickly in Case of a Chemical Emergency

Control

In order to evaluate how residents perceive their roles in their own safety during a chemical emergency, residents were asked if they agree or disagree that they can protect themselves and their families in case of an emergency.

Please tell me if you agree or disagree with the following statement:

"I am able to protect myself and my family in the event of a chemical emergency." (Q30)

Residents who agree they can protect themselves and their family were labeled as having a high control level, and those who disagree were labeled as having a low control level. Figure 45 illustrates than more than three-fourths (76%) of all EPZ residents agree with the statement above and feel they can protect themselves and their families in the event of a chemical emergency. There is a significant increase of 11 percentage points compared to the surveys conducted in May 2004 (65%).

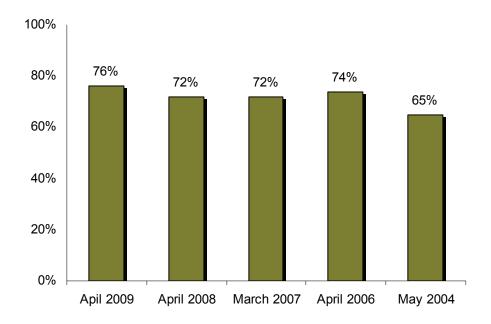

Figure 45: Confidence in Ability to Protect Self and Family during a Chemical Emergency

Figure 46displays the percentages at the county level.

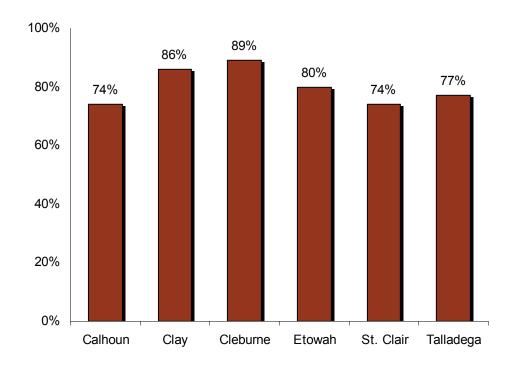

Figure 46: Confidence in Ability to Protect Self and Family during a Chemical Emergency

Trend Analysis

Overall, the level of trust seems to be slightly higher than the level of control for the respondents living in the area surrounding the Anniston Army Depot. Both the level of trust and level of control has increased significantly since the first survey conducted in May 2004.

Trust and Control Model

The Trust and Control Matrix in Table 4 forms the intersection of the responses to the two previously-mentioned survey items, which define four groups. These groups provide a framework for analyzing the responses to this survey.

Trust and Control groups generally have the following characteristics:

- Participants: Trust CSEPP/Army and feel that they have personal control in the event of a chemical emergency
- **Believers:** Trust CSEPP/Army but feel that they have little, if any, personal control in the event of chemical emergency
- Watchdogs: Do not trust CSEPP/Army but feel that they have some personal control in the event of a chemical emergency
- Cynics: Do not trust CSEPP/Army and feel that they have little, if any, personal control in the event of a chemical emergency

Trust and Control groups can be important in segmenting a community, in order to categorize the respondents based on their behavioral characteristics. These groups are, in essence, another demographic variable like age of respondent, gender of respondent, and so on. IEM's Trust and Control model does the following:

- Distinguishes between behavioral traits, as opposed to physical characteristics used by common demographics
- Gives insight into the motivations and beliefs of the community
- Can also be targeted through specific media channels like other demographic variables

Table 4: Trust and Control Matrix

	High Control Level	Low Control Level
High Trust Level	Participants, 68%	Believers, 16%
Low Trust Level	Watchdogs, 9%	Cynics, 8%

Figure 47 compares the percentage of respondents belonging to the four trust and control groups over the course of the surveys. The share of residents belonging to the Participants group has increased significantly from 51% in May 2004 to 68% in April 2009.

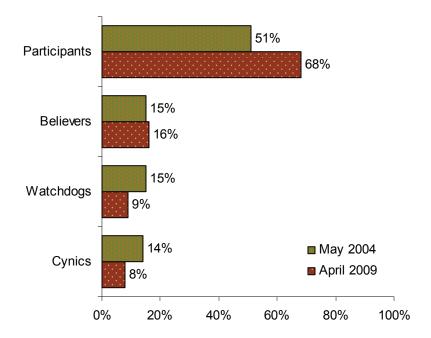

Figure 47: Trend in Trust and Control Groups

In survey analyses across CSEPP survey sites, Participants have generally been found to be the most prepared for a chemical emergency and have the highest knowledge of protective actions when compared to the other Trust and Control groups. The second largest percentage group is the Believers, making up 16% of the community. Believers feel like they would have a lower sense of personal control in a chemical emergency as compared to Participants. Their lower sense of personal control is associated with a lower level of preparedness and knowledge of protective actions.

The last two groups, Watchdogs and Cynics, account for a total of 17% of the Alabama EPZ community in April 2009. Watchdogs are generally ranked second after Participants with regard to preparedness and knowledge of protective actions across CSEPP sites. Even though many Watchdogs feel like they are prepared for a chemical emergency, they have a low level of trust in the local officials. Activists are likely to fit into this category. Cynics have low trust in local officials and would have low control in the event of a chemical emergency. They are generally ranked last in preparedness and knowledge of protective actions.

County-Specific Results

In addition to the core questions that are being used by all the CSEPP sites, each participating community adds site-specific questions. IEM worked with the WIPT and county emergency management PIOs to create and incorporate county-specific questions. Some of the counties opted to include county-specific questions in the survey questionnaire. It should be noted that for these questions the margin of error is different

from ± 3.4 percentage points. County-specific results are shown in the following sections of the report.

Calhoun County

Calhoun County added questions for its residents that were aimed at assessing the level of preparedness among the special needs populations. The county also asked the residents to specify the media source they would rely on in order to get information during the event of an emergency.

Do you know the evacuation route you should follow in the event of an evacuation? (11b)

As illustrated in Figure 48, an estimated 65% of the residents in Calhoun County are aware of the evacuation route to be taken in the event of evacuation. This figure has remained unchanged since May 2004.

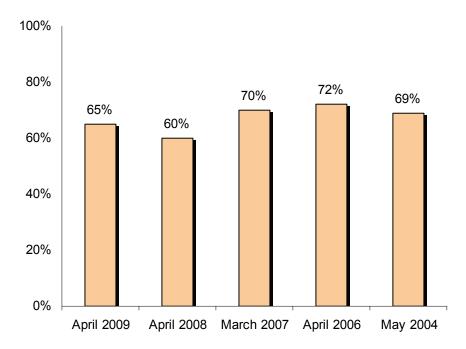

Figure 48: Knowledge of Evacuation Route for Calhoun County

Calhoun County residents were asked two questions regarding special needs populations.

Do you or any member of your household have any physical or mental condition that would prevent you or them from being able to shelter in place or evacuate? (35)

As can be seen in Figure 49, 20% of the households indicate that they have at least one member in the family who will not be able to shelter in place or evacuate during an emergency.

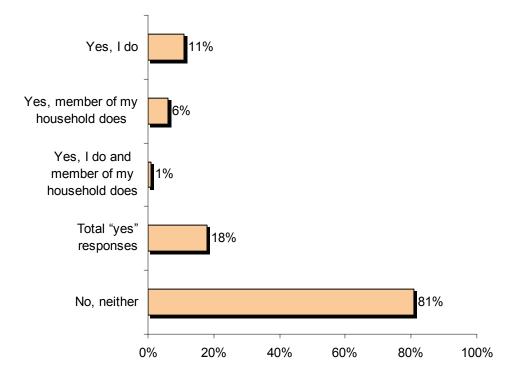

Figure 49: Calhoun County Households with Special Needs

Have preparations been made with family, friends, neighbors, or anyone else to help you/them in case the public is advised to shelter in place or evacuate?(36)

This question was only asked of respondents in Calhoun County who indicated in Question 35 that they or a member of their household have a physical or mental condition that would prevent them from being able to take a protective action. Figure 50 shows there have been little changes in this area in the past few years. In April 2009, 44% of residents with special needs in Calhoun County indicate they have made preparations for a chemical emergency.

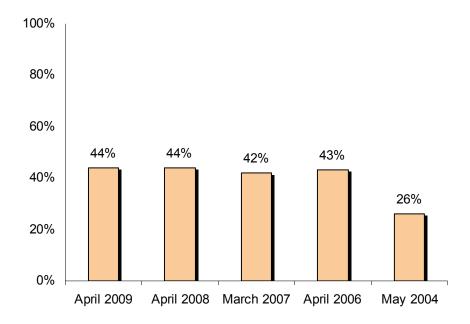

Figure 50: Calhoun County Special Needs Populations who have Made Preparations for a Chemical Emergency

Residents from Calhoun County were asked to specify the media source they would first turn to in order to get information and instructions during a severe weather or chemical emergency.

In the event of severe weather (such as a tornado) or a chemical emergency, would you first turn to the television (TV) or radio for information and instructions? (37)

As illustrated in Figure 51, the majority of Calhoun residents (63%) would watch TV for information and instructions during a severe weather or chemical emergency. In addition, 15% indicated they would listen to the radio and 17% said they would both watch TV and listen to the radio.

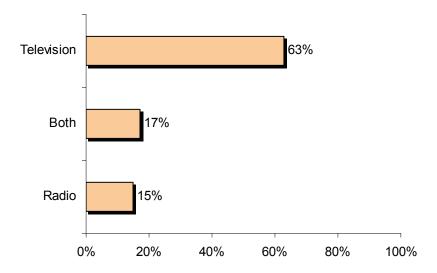

Figure 51: Media Sources for Emergency Instructions for Calhoun County

Further, residents were asked to specify the television channels and radio stations they are most likely to watch/listen to.

Which of the following television stations are you most likely to watch? (38)

As shown in Figure 52, slightly over two thirds of the Calhoun County residents who indicate they will watch television (54%) say they are most likely to watch TV Alabama Channel 33/40.

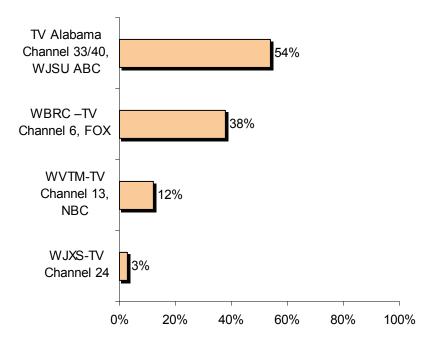

Figure 52: Television Channels Calhoun County Residents are Most Likely to Watch

Which of the following radio stations are you most likely to listen to? (38b)

As shown in Figure 53, the most popular radio station among Calhoun County residents is WVOK FM (33%) followed by the WHMA AM (11%) and WNSI AM 810 (11%).

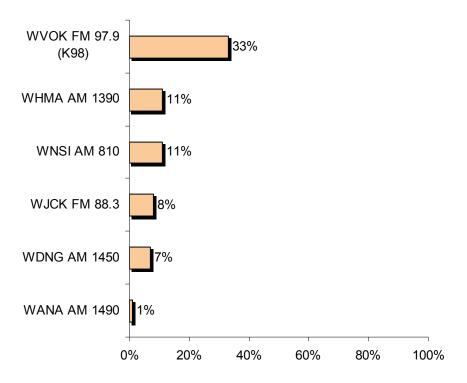

Figure 53: Radio Stations to which Calhoun County Residents are Most Likely to Listen

Summary of Calhoun County Results

- Almost all (95%) Calhoun County residents are aware of the chemical agents being destroyed at the Anniston Army Depot.
- Even though 67% of residents say that their local EMA has given them the information and materials they need to make a family emergency plan, only 43% say they have developed a family emergency plan.
- Overall, 65% of Calhoun County respondents are confident they can shelter in place.
- Nearly (81%) parents of school children in Calhoun County are confident their children will be safe in the care of the schools during a chemical emergency. However, only 50% of parents are familiar with the emergency plan at their children's schools.
- An estimated 91% of Calhoun County residents have received CSEPP information.
- The majority of Calhoun County residents (76%) trust the public will be notified quickly in case of a chemical emergency at the Anniston Army Depot.

Clay County

Clay County intended to find out if the residents living in their area were familiar with the evacuation route that they would follow in the event of evacuation.

Do you know the evacuation route you should follow in the event of an evacuation? (11b)

Figure 54 illustrates that 66% of the Clay County residents say they are aware of the evacuation route to be followed in case of a chemical emergency. This figure has remained relatively constant since 2004.

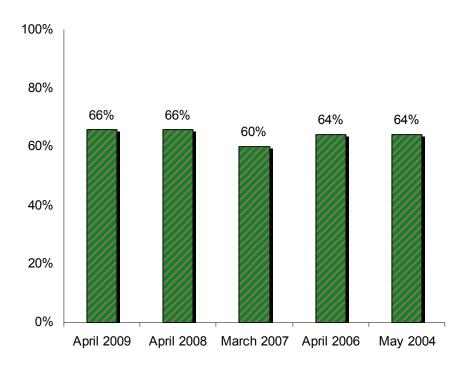

Figure 54: Knowledge of Evacuation Route for Clay County

Summary of Clay County Results

- Almost all (96%) Clay County residents are aware of the chemical agents being destroyed at the Anniston Army Depot.
- An expected 28% of respondents expect to receive further instructions through TAR, the highest proportion of any county.
- While the majority (75%) of the residents say that their local EMA has given them the information and materials they need to make a family emergency plan, less than half of the families surveyed (42%) have one.
- Overall, an estimated 72% of residents are confident they can shelter in place properly.
- An estimated 87% of parents of school children in Clay County are confident their children will be safe in the care of their schools during a chemical emergency, while a small majority (73%) is familiar with the emergency plan at their children's schools, which is up from 46% last year.

 Overall 94% of Clay County residents have received CSEPP information, higher than any other county.

Cleburne County

The questions added by Cleburne County were specifically aimed at assessing the level of confidence the public invested in its local emergency management agency and first responders.

Did Cleburne County Emergency Management Agency (EMA) provide you with a shelter-in-place kit? (11i)

Only respondents who say they have a shelter-in-place kit in Question 11h were asked this question. A total of 93% of the Cleburne County residents who are in possession of a shelter-in-place kit indicate that the Cleburne County EMA has provided them with the kit, which has increased by 7 percentage points since April 2006.

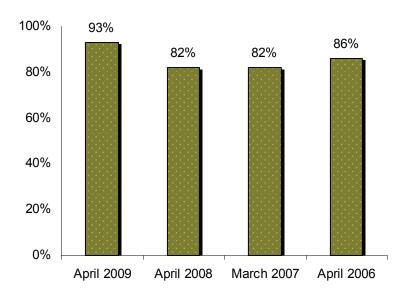

Figure 55: Distribution of Shelter-in-Place Kits by Cleburne County EMA

Cleburne County residents were asked questions regarding their general level of confidence in certain government agencies.

What is your level of confidence in the following... (Q12)

- a) Anniston Army Depot Personnel?8
- b) Cleburne County Commission?
- c) Cleburne County School Personnel?9
- d) Cleburne County Sheriff's Department?
- e) Your County's Fire Department?

⁸ This question was added in the 2007 survey for Cleburne County.

⁹ This question was added in the March 2007 survey for Cleburne County.

- f) Cleburne County Emergency Medical/Ambulatory Service?
- g) Cleburne County Emergency Management Agency (EMA)?

Cleburne County residents' level of confidence in the various government agencies is illustrated below in Figure 56. Some parts of the question were not asked in all years. Data is provided for the first year when the question was asked and is compared with the current survey numbers. A positive trend has been observed for all the agencies except the school system.

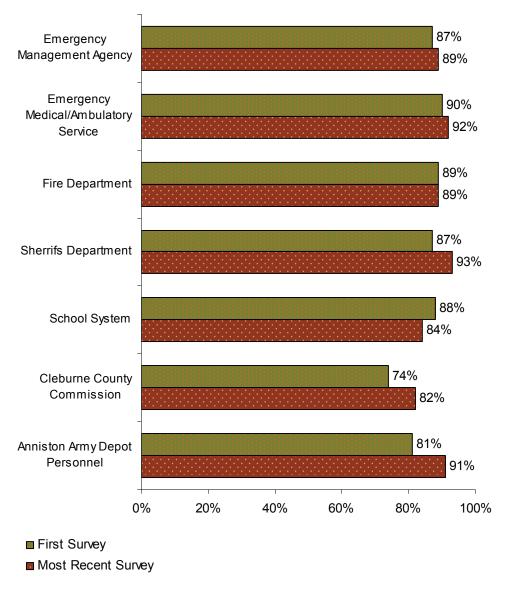

Figure 56: Confidence in Cleburne County Government Agencies

Only Cleburne County residents in zone A-12 were asked the following questions:

What is your level of confidence in the following... (Q13)

- a) Your City's Elected Officials (Mayor and City Council Members)?¹⁰
- b) Your City Police Department?¹¹
- c) Your City Fire Department? 12
- d) Your City Parks and Recreation Department?¹³

Figure 57 illustrates the responses to Question 13.

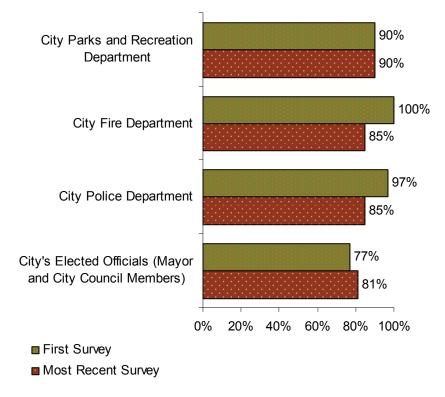

Figure 57: Confidence in Cleburne County Zone A-12 City Officials

Summary of Cleburne County Results

- Ninety-two percent of Cleburne County residents are aware of the chemical agents being destroyed at the Anniston Army Depot.
- Overall, 85% of Cleburne County respondents say that their local EMA has given them the information and materials they need to make a family emergency plan, more than any other county; 63% have created an emergency plan.

¹⁰ This question was added in 2007 for the zone A-12 residents in Cleburne County.

¹¹ This question was added in 2007 for the zone A-12 residents in Cleburne County.

¹² This question was added in 2007 for the zone A-12 residents in Cleburne County.

¹³ This question was added in 2007 for the zone A-12 residents in Cleburne County.

- The majority (83%) percent of Cleburne County residents say they are confident in their ability to shelter in place.
- Two-thirds (52%) of parents of school children in Cleburne County are familiar with the emergency plan at their children's schools, the highest proportion of all counties. More than three-quarters (78%) are confident that their children would be safe in the care of their school during a chemical emergency.
- Overall 96% of residents have received CSEPP information.

Etowah County

Etowah County was interested in finding out the proportion of the population that belonged to any organization or group that would help people with special needs. Further, they also asked the respondents who did not belong to any of the groups if they were interested in becoming a part of one. This would help the local emergency management agency to get a count of individuals who could possibly volunteer to assist people in the event of an emergency.

Are you a member of an organization or group in Etowah County that provides assistance to people with special needs in the event of any type of emergency (severe weather, fire, chemical emergency)? (Q31)

As illustrated in Figure 58, 10% of the Etowah County residents are a member of an organization or group that provides assistance to people with special needs in the event of any type of emergency.

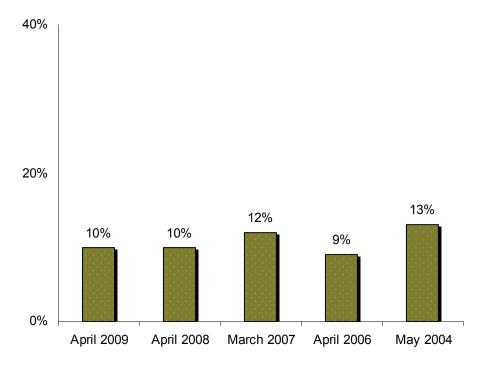

Figure 58: Membership in a Special Needs Support Group

Please tell me if you are a member of one or more of the following groups. (Q32)

Etowah County residents who are member of a support group were asked to specify the type of group in which they were affiliated. Figure 59 illustrates the type of support group in which residents participate and is compared with May 2004 numbers.

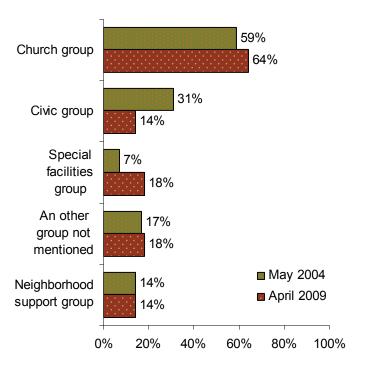

Figure 59: Types of Special Needs Support Group Membership

All Etowah County residents were asked the following question:

In the unlikely event a chemical emergency at the Anniston Army Depot, there is a possibility that the emergency may affect Etowah County residents. Would you consider being part of a community based support team or group to assist people with special needs to shelter in place or evacuate during a chemical emergency? (Q33)

Figure 60 shows that 42% of Etowah County residents would consider being part of a community-based support team or group to assist people with special needs to shelter in place or evacuate during a chemical emergency.

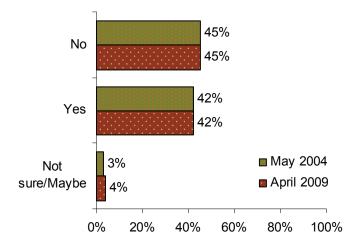

Figure 60: Consideration in Joining a Community-Based Support Group for People with Special Needs

Please tell me if you would consider becoming an active participant of one or more of the following support groups (some are established groups and others have not been established yet). (Q34)

Responses from residents who indicated they were already members of one or more of these groups were combined with responses from Q34 and are illustrated in Figure 61.

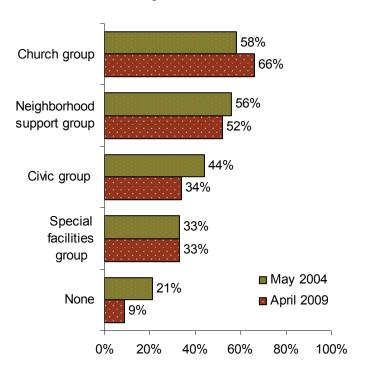

Figure 61: Type of Support Group Residents would Consider Joining

Summary of Etowah County Results

- As in previous years, the vast majority (90%) of Etowah County residents are aware of the chemical agents being destroyed at the Anniston Army Depot.
- Although 69% residents say that their local EMA has given them the information and materials they need to make a family emergency plan, only 48% residents say they have a family emergency plan.
- An estimated 69% say they are confident they would be able to shelter in place in the event of an emergency.
- Just over one-half of parents of school-age children in Etowah County (51%) are familiar with the emergency plan at their children's schools. Overall, 91% parents are confident their children would be safe in the care of their school during a chemical emergency.
- Almost all (93%) residents of Etowah County say they have received CSEPP information.

St. Clair County

Summary of St. Clair County Results

- An estimated 90% of St. Clair residents are aware of the chemical agents being destroyed at the Anniston Army Depot.
- Only 37% of residents have a family emergency plan even though 68% say that their local EMA has given them the information and materials they need to make a family emergency plan.
- Almost half (46%) of parents with children in a local school are familiar with the school's emergency plan. However, a majority (77%) of parents surveyed have confidence that their children are safe at school.
- An estimated 70% of the respondents are confident in their ability to shelter-in-place.
- Overall, 93% of St. Clair County residents have received CSEPP information.
- An estimated 82% of residents have access to the Internet.

Talladega County

Talladega County added two questions specifically for its residents. The questions were designed to see if respondents were aware of the city that had been designated for them in the event of evacuation and if they were familiar with the quickest route to get to that city.

In the event of an evacuation, do you know the city that has been designated as the final destination for people leaving your area? (11c)

Figure 62 shows that approximately one-third (44%) of Talladega County residents know the designated city they should go to during an evacuation. This figure is relatively unchanged since 2004.

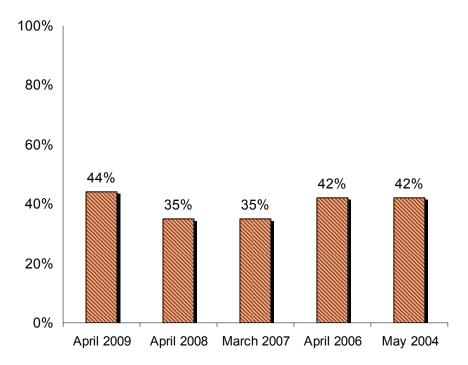

Figure 62: Knowledge of Designated Destination in the Event of Evacuation

Do you know the quickest route to that city? (Q11d)

Figure 63 illustrates that the vast majority (96%) of respondents who indicated that they know the designated city in the previous question know the quickest route to that city.

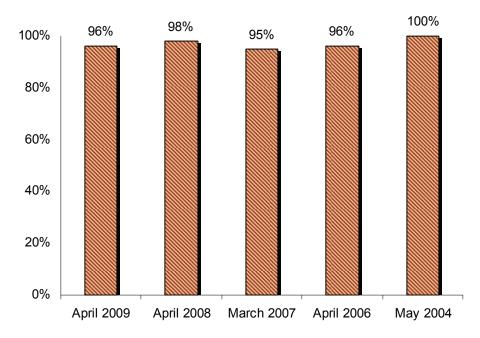

Figure 63: Quickest Route to the Designated Evacuation Destination

Summary of Talladega County Results

- The vast majority (90%) Talladega residents are aware of the chemical agents being destroyed at the Anniston Army Depot.
- While three-fifths (60%) of residents say that their local EMA has given them the information and materials they need to make a family emergency plan, less than one-half (47%) have created such a plan.
- While 71% of parents are confident that their children will be safe in the care of their school during a chemical emergency, only less than half (39%) of parents know the school's emergency plan.
- An estimated 89% of residents say that they have received CSEPP information.
- Of respondents in Talladega County, 16% of residents are not confident that the public would be notified quickly of a chemical emergency.
- Overall 69% of residents say they have Internet access.

Demographics

This section provides a summary of each of the demographic questions in the survey. Notable results (i.e., differences that are larger than the margin of error) are included for certain demographic groups. Appendix B: Anniston Emergency Planning Zone Cross Tabulations provides a detailed breakdown of the survey questions by all of the common

demographic groups. The Alabama CSEPP community should scrutinize the demographic breakdowns prior to developing their public outreach strategy.

What is your approximate age? (Q40)

Figure 64 compares the age distributions of the EPZ who took part in the April 2009 and May 2004 surveys.

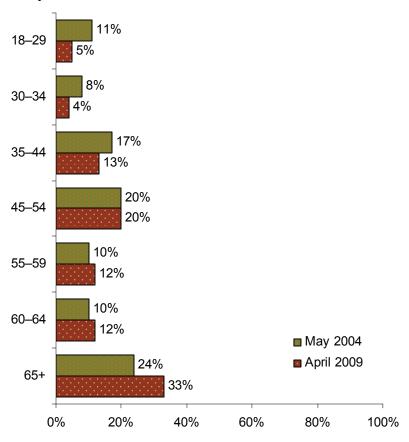

Figure 64: Approximate Age

Young Adults

- Fewer residents 18-29 years say that they have a pre-planned evacuation route for an emergency.
- Respondents in this age group are more likely to not know from where to get information on how to protect themselves and their families in the event of a chemical emergency.
- 18-29 year olds have the lowest percentage of residents with a shelter-in-place kit when compared with all other age groups together.

Gender (Q41)

As shown in Figure 65, 65% percent of survey respondents were female while 35% were male.

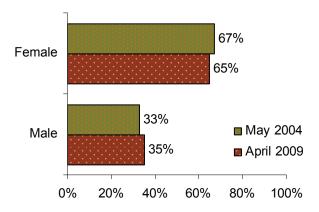

Figure 65: Gender of Respondents

What is your ethnic background? (Q42)

The majority of Calhoun and Etowah EPZ residents surveyed are Caucasian, as shown in Figure 66.

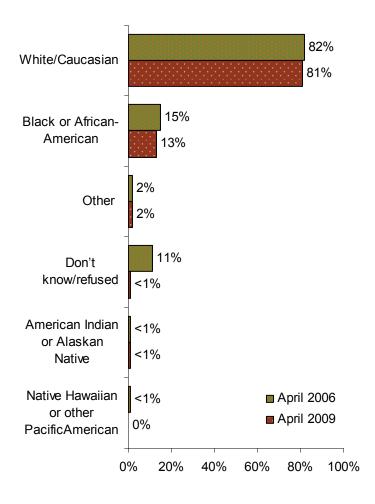

Figure 66: Ethnic Background

How long have you lived in the vicinity of the Anniston Army Depot? (Q43)

As with previous surveys, the majority of residents (64%) have lived in the area for more than 20 years, as shown in Figure 67.

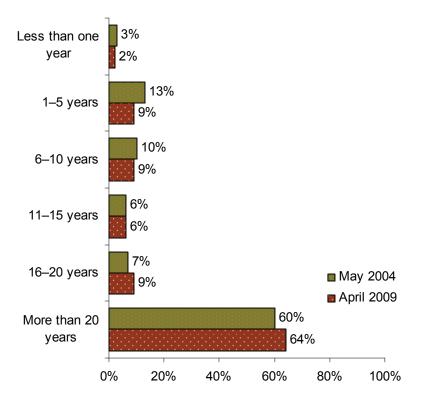

Figure 67: Time Living in Area

- Residents who have lived in the vicinity of the Anniston Army Depot for less than 1 year are less likely to use a shelter-in-place kit when instructed to shelter-in-place.
- Residents who have lived in the vicinity of the Anniston Army Depot for less than 1 year are less likely to complete all of the actions required to complete SIP Step 2 when instructed to shelter-in-place.
- Residents who have lived in the vicinity of the Anniston Army Depot for less than 1 year are less likely to have a preplanned evacuation route, destination, or direction (30%) than 6-10 year residents (40%) and 16-20 yr residents (46%).
- Residents who have lived in the vicinity of the Anniston Army Depot for 1-5 years are less likely to have preplanned evacuation route, destination, or direction (36%) than 16-20 yr residents (46%).
- Residents who have lived in the vicinity of the ANAD for less than 1 year are less likely to say the local EMA has given the information and materials needed to make a family emergency plan (15%) when compared with all other residents (52%-75%).

- Residents who have lived in the vicinity of the ANAD for less than 1 year are less likely to have received CSEPP information (55%) when compared with other residents (88%-97%).
- Residents who have lived in the vicinity of the ANAD for less than 1 year are less likely to have received CSEPP information through the mail (15%) when compared with other residents (50%-69%).
- Residents who have lived in the vicinity of the ANAD for 1-5 years are less likely to have recall information about the evacuation route (9%) when compared with residents who have lived in the area longer than 5 years (19%-28%).

Do you have access to the Internet? (Q44)

As illustrated in Figure 68, 70% of respondent have Internet access.

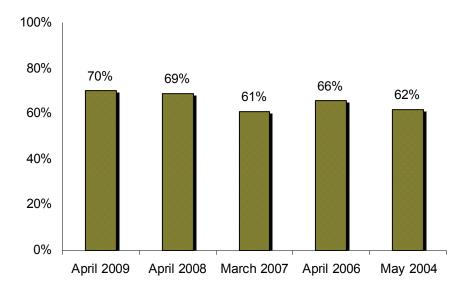

Figure 68: Internet Access

- More residents with Internet access have an emergency plan (50%) than residents without access to the Internet (34%).
- More residents who have Internet access say that they have received information and materials (72%) needed to make a family emergency plan than those who have no Internet access (62%).
- More people with Internet access trust that they will be notified quickly in case of a chemical emergency at the Anniston Army Depot (80%) when compared to respondents who do not have access to the Internet (73%).
- Internet users are more likely to be participants (65%) than non-users (56%).

Are you, or any member of your household, a member of the local emergency management or first responder community? (Q45)

In the April 2009 survey, 6% of respondents are, or have a household member who is, a member of local emergency management or first responder community.

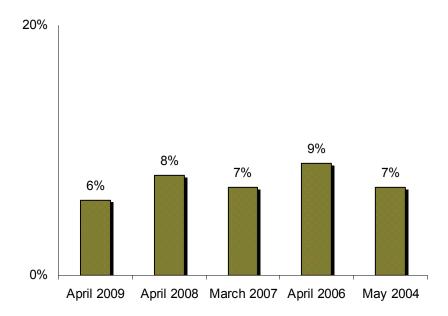

Figure 69: Household Member is Local EMA or First Responder

Are you, or any member of your household, employed by the Anniston Army Depot? (Q46) As illustrated in Figure 70, 6% of households surveyed include an Anniston Army Depot employee.

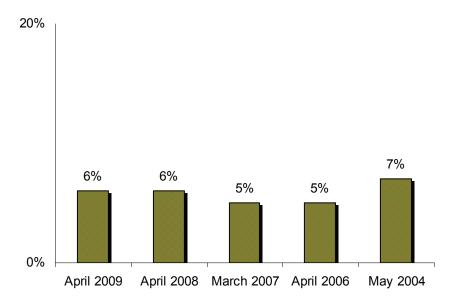

Figure 70: Household Member is Employed by Arsenal

What city, town, or community do you live in? (Q46) ¹⁴

Figure 71 shows the most common cities in which respondents reside.

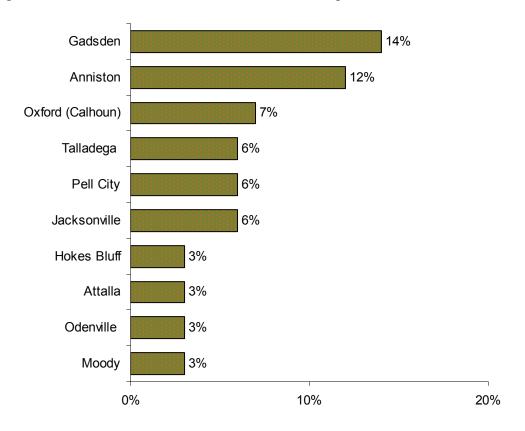

Figure 71: Residents' City

¹⁴ One respondent did not answer this question.

CONCLUSIONS AND RECOMMENDATIONS

ANNISTON OUTREACH ACHIEVEMENTS IN LAST 5 YEARS

Trends in the survey data highlight the progress made through public outreach over the course of several years. In order to observe trends and note areas of improvement, as well as areas that still need improvement, results from the first survey (May 2004) are compared to the most recent survey results (April 2009) and have been documented in this report. The Anniston CSEPP public outreach program has matured over time and has yielded significant improvements in several areas of public preparedness. Most notably:

- 84% percent of residents are confident they would be notified quickly in the event of a chemical emergency. This number has increased 15 percentage points since the first survey (69% in May 2004).
- The percentage of residents who agree they would be able to protect themselves and their family in the event of a chemical emergency has increased 11 percentage points over the course of the survey (from 65% in May 2004 to 76% in April 2009).
- 68% percent of the residents say they are confident they know how to shelter in place in the event of a chemical emergency. This is an increase of 7 percentage points from 61% in May 2004.
- 81% percent of parents are confident that their children will be safe in the care of the school in the event of a chemical emergency. This has increased significantly from 70% in May 2004; an increase of 11 percentage points.
- Either through the media or secondary messages in outreach, evacuation awareness has improved dramatically over the last 5 years. There is a 44 percentage point improvement in the number of respondents who indicate they have a specific preplanned direction, route, or destination for an evacuation.

RECOMMENDATIONS FOR FUTURE PUBLIC OUTREACH

The purpose of the Anniston survey is to measure the effectiveness of existing public outreach efforts and provide information that will enable the community to focus on target areas and/or audiences for future outreach. The recommendations below were developed after careful analysis of the data and are intended to both augment existing outreach tactics and further illustrate the need for outreach in specific areas. Survey results have indicated that the Anniston CSEPP community has reached a plateau in improvement in some areas of outreach. Consider the following two examples:

- Family Emergency Planning is one area that has remained static since May 2004. In May 2004, 42% of residents indicated to having had a family emergency plan for a chemical emergency, which went up by just 2 percentage points in April 2009.
- In May 2004, 59% of parents reported they were likely to get their children from schools during a chemical emergency. Five years later, the number is 57%. Since May 2004, the community has seen no significant improvement in the number of parents likely to get their children from schools during a chemical emergency.

It would be useful for the Anniston CSEPP community to develop performance measures that establish target levels of public knowledge for these areas of CSEPP preparedness. Establishing performance measures will enable survey groups to identify gaps in public knowledge or response and will allow outreach dollars to be allocated according to objective standards that would target the most pressing needs of the community. Without a performance measure by which to judge these numbers, it is not possible to determine which plateau is a positive result (maximized outreach) and which one is a negative result (current outreach has outlived effectiveness and merits reconsideration).

The percentage of residents who expect to be alerted of a chemical emergency via tone alert radios (TARs) increased from 17% to 25% and by weather radios from 1% to 11% points since May 2004. Similarly, when respondents were asked from where they would seek protective instructions; responses for TARs increased from 10% to 21%, and for weather radios from 1% to 9%. The greatest increase occurred mostly since the last survey conducted in April 2008. This probably can be attributed to the transition from TARs to emergency alert radios (EARs) that enabled residents to receive free weather radios to replace previously distributed TARs. The multi-faceted publicity and promotion of the CSEPP county-wide TARs to EARs media campaign appears to have had a positive effect on people's recollection of the radios' purpose. For the first time, TARs replaced television as the second choice for receiving an alert. Siren/loudspeaker remains the number one response for a chemical emergency alert. It is recommended that the WIPT continue to use the outreach materials that have been used to educate residents about sources of alert and emergency instructions.

According to the survey results and subsequent analysis, we recommend focusing future outreach education in the following priority areas:

- 1. Emergency Planning
- 2. Shelter-in-Place
- 3. School CSEPP Education
- 4. Target Young Adults
- 5. Review Preparedness Information for New Residents

Family Emergency Plans

There has been no significant improvement in the percentage of respondents who are prepared with a family emergency plan for a chemical emergency. Based on available national figures for measuring preparedness level, it appears that the percentage of residents with a family emergency plan is relatively higher at CSEPP sites. The national average for people with a family emergency plan, for any kind of emergency, is around 20%. Consistent with national figures, the Nuclear Regulatory Commission Survey estimates that nearly 20% of the residents near nuclear facilities are prepared with a family emergency plan for a radiological emergency.

Although it is encouraging to note that the percentage of residents with an emergency plan at the CSEPP sites is higher, outreach must continue to target the rest of the population to help them prepare for an emergency situation. Overall, the figures appear to be unchanged; however, significant improvements have been tracked for Cleburne County. The percentage of residents in Cleburne County who indicated they have a family emergency plan rose from 49% in 2007 to 60% in 2008 and further to 63% in 2009. Since the percentages for other counties do not show improvement, it may be useful to modify the survey questions to collect more detailed information that identifies what may be considered as "critical steps". Respondents acknowledge that they have the information needed to develop emergency plans. The challenge is getting them to draft the plan. Since Cleburne County has been successful in increasing the number of people who have emergency plans, other counties could emulate Cleburne's efforts in this area. Other outreach could include:

- Integrate developing an emergency plan into National Preparedness Month (September) activities and events.
- Send Twitter¹⁵ messages weekly with tips on what to include in an emergency plan and the importance of having a plan
- Develop a drawing in which participants must submit an emergency plan for a chance to win a prize, such as tickets for a major event, gift certificates, hotel stay, etc.
- Tie presenting a completed plan into CSEPP promotional giveaways, e.g., "Receive a backpack full of emergency preparedness essentials when you bring a copy of your emergency plan to the local fire station."

¹⁵ Twitter is becoming the fastest growing social networking tool available. The concept of Twitter relies on messaging services, whether it uses a cell phone, instant messenger, such as Yahoo Messenger or MSN Messenger, or through specific websites.

Shelter-in-Place

Risk and crisis communication require different approaches, and every attempt should be made to repeat necessary protective actions for those who either have not received CSEPP outreach or who have chosen to ignore preparedness messages. Taking the most basic recommended shelter steps is likely to provide much more protection than an unpredictable response or taking no action at all. There are a number of key messages to focus on when it comes to sheltering-in-place. However, the single most important shortfall in sheltering-in-place preparedness, based on the survey results, is that respondents do not indicate they would turn off heating and air conditioning systems. While 57% report they would seal the doors and windows of their shelter room if instructed to shelter in place, only 18% mentioned turning off heating and air conditioning. A series of advertisements dealing solely with this issue is recommended. They can be placed in the larger context of a sheltering-in-place as the campaign theme, but should be clearly and unequivocally geared toward conveying this single message. Consider the following example:

Sheltering-in-place with your air conditioner running is like inviting bad air into your home. When told to shelter in place during a CSEPP emergency, make sure you turn off fans, heaters, and air conditioners after you close your doors and windows. This way, when you seal your shelter room, you are blocking dangerous air from outside your house into the room that is keeping you safe.

This example introduces a benefit and a consequence of taking a correct action, and also includes other key steps to sheltering-in-place—but not as part of a step-by-step process. There is a temptation to load outreach with four or five messages to convey the most information possible. However, with the response of turning off heating and air conditioning systems lagging behind other steps in shelter-in-place, it will be more valuable to focus on this one step. Analogies can reinforce the logic behind a recommended action, and it can often serve as a reminder when mere fact does not make enough of an impression.

School CSEPP Education

This has consistently been a challenging area across CSEPP sites. It is hard for parents to believe it is better for the child to remain at school instead of being picked up even though most are confident their children will be safe. Eighty-one percent (81%) of parents are confident that their children will be safe in the care of the school in the event of a chemical emergency. This has increased significantly from 70% in May 2004. However 57% of the parents say they are likely to get their children from school during a chemical emergency. Forty-five percent (45%) of the parents are very likely and 12% are somewhat likely to get them. This number remains unchanged since the first survey in May 2004.

The survey results indicate that very few parents are aware of the school plans. In May 2004, an estimated 53% of the parents indicated that they were aware of the school plan; this has declined to 48% in April 2009. More parents in Clay County seem to be aware of

the school plans; however, they are the ones who are more likely to pick up their children from school

It is recommended that a to-do list be incorporated for each month in the CSEPP calendar. This would give residents a task to complete each month. For example, on January's to-do list, there could be a check list that would be designed to help residents in reading the emergency plans of their children's schools, as well as reading the calendar in its entirety.

There could be a prize or promotion associated with completing certain tasks—specifically for school tie-ins. Anniston PIOs could garner promotional give-away items from local businesses to give to schools for contests to be held once per semester or once per year to promote children filling out to-do lists with their families from the calendar. Schools can also offer their own prizes, such as bonus points, free-dress days, or pizza parties.

Target Young Adults

Survey results indicate that the age group 18-29 seems to be lagging behind other age groups in most survey areas; they are the highest percentage of residents who do not know how they would get information regarding how to protect themselves and their families in the event of a chemical emergency. Fewer residents in this age group have a shelter-in-place kit and an emergency plan in case of a chemical emergency at the Anniston Army Depot compared to other age groups. For specific results, see the Demographics section of this report. Anniston PIOs should consider explicitly targeting this population to assist them in developing an emergency plan.

New and social media such as Twitter, telephone texting, and emergency information on a 'Facebook' page may be effective ways of getting information to this population. Twitter, especially, is effective for alert and notification messages during an emergency. This age group is technology savvy and readily embraces these communications channels.

Review Preparedness Information for New Residents

Survey results indicate that residents who have moved into the vicinity of the Anniston Army Depot in the last year are lacking many of the key knowledge points toward preparedness for a possible chemical emergency. See the Demographics section for specific examples.

As recommended in 2004, the WIPT should review current outreach that is targeted for new residents. This outreach should not only focus on preparing new residents for a chemical emergency, but also should be designed to build trust in the local EMA and the CSEPP organization. New resident information should include fact sheets and checklists regarding the warning systems, evacuation, sheltering-in-place, and family emergency plans. The WIPT should consider coordinating with the Anniston Chemical Demilitarization Community Outreach Office on these efforts.

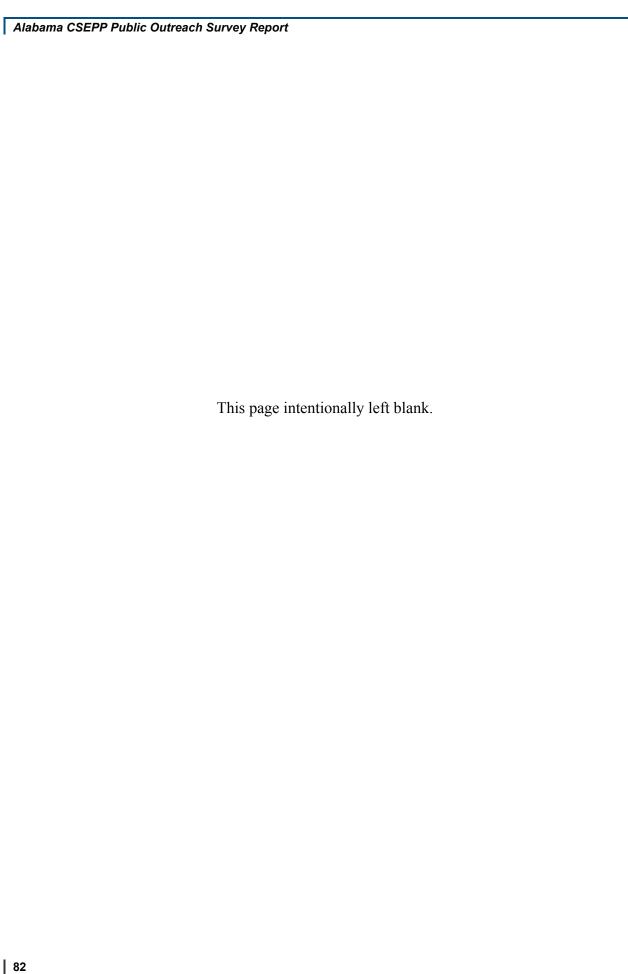

POINTS OF CONTACT

The primary IEM point of contact for this project is Sangeeta Singh. She may be reached at:

APPENDIX A: SURVEY TEXT AND TABULATIONS

In this section, responses from the April 2008 survey have been tabulated for each question and compared with the data from 2004, 2006, and 2007 surveys for the applicable questions. The responses have been calculated as a percentage of the total number of respondents; however, there are some questions which were asked only from respondents in a specific county or zone. This has been indicated in the title of the tables. Here, the reported percentages are out of the sample of residents answering the question. The number of residents answering a particular question is represented by the letter 'n' in the tables. The results in the tables have been sorted by the response percentages in the April 2008 survey. For some of these questions, two tabulation tables are included—one that shows the proportion of only those residents who answered the question and a second that shows the results as a proportion of the total sample.

General Introduction...

Hello, this is (FIRST AND LAST NAME) of CR Dynamics, working with the Department of Homeland Security on behalf of your local county emergency management agency. We are not selling anything. We are conducting a survey among people living near the Anniston Army Depot regarding preparedness. Do you have a few minutes to answer a few questions?

IF YES: Are you 18 years of age or older?

IF NO: Is there someone else I can talk to who is 18 years of age or older?

IF UNAVAILABLE, SCHEDULE CALLBACK AND TERMINATE

S1: Do you live in (NAME OF COUNTY PROVIDED BY FIPS CODE) County?

S2: IF NO: What county do you live in?

Note: Percentages may not equal 100%. This may be due to rounding and/or some questions accepted multiple responses.

1. Are you aware of the chemical agents that are being destroyed at the Anniston Army Depot?

Table 3: Responses to Question 1¹⁶

Response	April 2009	April 2008	March 2007	April 2006
Yes	92%	89%	92%	94%
No	8%	11%	8%	6%

"Other" comments offered in addition to the yes/no response to Question 1:

¹⁶ In addition to answering yes or no to this question, any other comments the respondent offered were collected. 2% of respondents offered an additional comment.

Alabama CSEPP Survey Tabulations

- Don't know nothing about it
- I understand that chemicals are almost completely destroyed
- I worry about it
- Know they are destroying some, but don't know what they are
- New to the area
- Not aware of exactly what.
- No info on the subject
- Not as much as I should be
- Not aware of what agents
- Not entirely
- Not exactly heard but not sure
- Not sure what kind

- Only what I read in the paper
- Pay no attention
- Read something about it
- See it in the paper and heard about it
- She heard that today
- Thought they were almost through
- We have an flyer and emergency plans in place
- Wondering when it's going be done

2. How would you know if there were a chemical emergency at the Anniston Army Depot?

Table 4: Summarized Open-Ended Responses to Question 2¹⁷

Response	April 2009	April 2008	March 2007	April 2006
Siren/Loudspeaker	51%	54%	62%	66%
Tone alert radio	25%	16%	19%	14%
Television	17%	20%	22%	22%

Towel under the door		<1%	<1%	<1%
Dependent on some one else				<1%
I would be too late/Wait to get sick or die			<1%	

"Other" responses to Question 4:

- Do the best I could
- Stay in touch
- Because I live in trailer don't think it will help to many holes
- Call for assistance
- Do what mom says to do knows more about it
- Hard to get through double pane windows

- Have info
- Have not been instructed
- House could not stand the fumes
- I can't walk. I'm paralyzed
- I do not remember receiving info on shelter in place
- I have a suit to put on that my daughter bought but needs help
- I live in a trailer

Alabama CSEPP Survey Tabulations

- I would ignore instructions
- I'm not prepared
- If it happens, hopefully it would be in the summer
- It not possible
- Legal
- Not able to cover the windows but cant due to health & age
- On oxygen with limited ability would call husband

- Once it releases plastic stuff doesn't do any good
- Please discontinue survey calls
- Someone will come me
- Try to save our lives
- Was told would get a kit
- Weren't given a kit believe not in the area
- Would have to stay at work. I work at a hospital

5. How would you know it would be safe to stop sheltering in place?

Table 7: Summarized Open-Ended Responses to Question 5²⁰

Response	April 2009	April 2008	March 2007	April 2006
AM/FM radio	26%	27%	38%	36%
Television/News	24%	25%	28%	28%

Anniston Army Depot/Military			<1%	<1%
Loudspeaker				<1%
Nothing				<1%

"Other" responses to Question 5:

- Check to see if I smelled anything
- Could not shelter in place
- Do not know if it would be safe
- Don't remember
- Don't remember
- Emergency kit
- Give it 4-5-6 hours later
- Got a glass door and screen to look out

- Have a list and go away from it
- Hopefully the station would tell
- I have a book that I would refer to that was mailed
- I received some training for chemical emergencies
- I would have to figure it out
- I would let 3 days pass
- Just risk it
- Less wind

Alabama CSEPP Survey Tabulations

- No safe place
- No way of knowing
- Nothing I can do
- Recently located to the area.
- Stay in
- Stay put
- Take the chance

- That's a good question
- When smelling a fume
- Which chemical
- Will have gas and there is nothing to do about it
- Worked out there

6. If you were instructed to evacuate, what actions would you take?

Table 8: Summarized Open-Ended Responses to Question 6²¹

Response	April 2009	April 2008	March 2007	April 2006
Leave home or workplace/Get out of town/Get in car and go	32%	29%	24%	24%
Evacuate in a specific direction	31%	34%	46%	38%

Go to work (Depot, hospital, fire department, police)	<1%	1%	1%	1%
Shelter in place	<1%	1%	<1%	
Turn on TV, radio, or tone alert radio (general)	<1%	1%	<1%	1%
Depends	<1%	<1%		
Lock/Secure house	<1%	<1%	<1%	1%
Pray	<1%	<1%	<1%	<1%
Close windows and vents in car				
Consult map				
Panic			<1%	

"Other" responses to Question 6:

- Call 911
- Dial 911 for assistance
- Do whatever common sense would tell me to do

- Do whatever that needs to be done
- Filled out paper work never received anything
- Go where everyone else is going

- Has a detector and is handicapped & would first informed
- I would pray and await help
- I wouldn't sit here and think about it
- If I had a bus load of people what would I do
- If I had to go to Florida, I would
- Keep windows up on car and leave immediately
- Listen for siren
- My husband knows

- No car. Wait for someone to pick/ stay in place
- Opposite of Anniston but may avoid I-20
- People would be jamming the roadways
- Raise windows
- Son (engineer) would know
- Use care on interstate to Birmingham or alt to Chattanooga, TN
- Would follow family plan for evacuation

7. In the event of an evacuation, do you have a pre-planned direction, route, or destination?

Table 9: Summarized Open-Ended Responses to Question 7²²

Response	April 2009	April 2008	March 2007	April 2006
Yes, direction	43%	42%	48%	44%
Yes, destination	39%	34%	48%	39%
Yes, route	36%	33%	45%	43%
Total "yes" responses ²³	59%	58%	63%	66%

Other	4%	1%	2%	4%
Depends on the wind direction	5%	4%	4%	5%
As instructed	1%	2%		
No transportation/Will not evacuate	<1%	1%	<1%	<1%
Depends on where I am/my family is located	<1%	<1%		
Far away	<1%		<1%	<1%

[&]quot;Other" responses to Question 7:

A-94

²² Multiple responses were accepted for this question.

Total "yes" responses included any of direction, route, or destination. Due to the acceptance of multiple responses, the Total "yes" responses may not equal the sum of direction, route, and destination.

- Brother will tell me
- Can't not drive in congested highway
- Depending on the roads, people might be at a standstill
- Depends
- Depends for how widespread the danger is
- Depends how big the problem and the direction of contamination
- Depends on how they tell to
- Depends on when and where
- Depends on which way told to go
- Did have an information chart such as a map
- Do not know (2)
- Do what mom says
- Don't know in what direction to go
- Don't know-- stuff sent to us
- Family members would know
- Get in car and leave

- Has map with destination
- Have brochures in drawer that are handy
- Head south
- Huntsville
- I don't have it memorized
- I don't look at their maps either
- I have one but do not know at the time
- I know where to go
- I was told someone would meet us at the county line
- It's in information package (2)
- Map (2)
- Meet in a certain area and go
- My husband has cancer so I really don't know
- Not right off
- They send one but I don't know where it's at (2)
- Yes, follow my son. He would come to get me

8. If a chemical accident occurred at the Anniston Army Depot, where would you get instructions on how to protect yourself and your family when you hear the warning signals?

Table 10: Summarized Open-Ended Responses to Question 8²⁴

Response	April 2009	April 2008	March 2007	April 2006
Television/News	33%	33%	34%	36%
AM/FM radio	27%	31%	44%	38%

Would not hear siren/warnings			<1%	<1%
Would not know				<1%
Would not wait for instructions				

"Other" responses to Question 8:

- Based on type of alert. Tells instructions
- Cover windows and doors or leave
- Cover windows in home.

- Depending on where I am at the time
- Did not receive information
- Follow the traffic the way everyone else is moving Fort McClellan

Alabama CSEPP Survey Tabulations

- From the city
- Have to get the rescue people to get me
- I don't think its anything they can
- Info from city of Gadsden
- Information to do if stay at home
- Instruction drop off
- It should be more detailed maps or instructions
- Likes to help everyone--probably the last one out
- Look out as best as can
- Read the instructions
- Scanner

- Shelter in place (3)
- Simply go west
- Stay inside and follow instructions
- Suspect they give instructions
- Tape up windows
- The detector
- Try and contact
- Use information provided
- Wait for order
- We were supposed to get a radio but haven't gotten it yet
- Word of mouth
- Would only stay if unable to move

9. Do you or your family have an emergency plan?

Table 11: Responses to Question 9

Response	April 2009	April 2008	March 2007	April 2006
Yes	44%	45%	46%	48%
No	56%	55%	54%	52%

10. Has your local emergency management agency given you the information and materials you would need to make a family emergency plan?

Table 12: Responses to Question 10

They do a good job/they care		<1%		
Depot is not prepared				
I live close to the depot				1%
I trust local government officials/Local government officials will alert us				<1%
Local government officials would try to cover up a chemical release				<1%
Not much that can be done				
Not sure Depot will inform us quickly				

"Other" responses to Question 29 for Confident Responses:

- Always in town
- Because I asked for an answer
- Because of the frequent bad weather
- Because the depot is so close
- Because were calling
- Because will hear and see it
- Citizens to deal with and want everybody to be safe
- Community people need to take note
- Doesn't live too far from the depot
- Don't exactly know who would be assisting me
- Don't watch much news or radio
- Everybody no another
- fear of chemicals and their travel distance
- Have not got any information
- I don't really see that happening
- I have a very big family
- Just because of the situation
- Know where you are
- Less FEMA gets involved the better the public will be better
- My daughter works at the pharmacy at the hospital

- My son works at Bynum
- Never happened before
- Never happened so she's no quite sure
- Never know which way the wind is blowing
- Not always watching television
- Panic button
- Radio and EMA
- some people may not have access
- Sometimes I don't get the info because I be sleep
- Son and family
- Son-in-law would let me know
- Taken a lot of actions and precaution
- Their restrictions and requirements
- They are the people in power.
- Very strict
- Want to save there butts a swell and their jobs
- Watch groups
- Will be glad when they finish
- Will not know until I can see what is happening
- Work at the school system

Table 57: Summarized Open-Ended Responses to Question 29: Why Residents are "Not Confident" They Will Be Notified Quickly⁷¹

Response for Not Confident Notified Quickly	April 2009 (n=1008)	April 2008 (n=997)	March 2007 (n=989)	April 2006 (n=982)
Not enough time to alert everyone/Not everyone will be informed	3%	5%	6%	17%
I don't trust the local government officials or government in general	3%	4%	5%	14%
Community/Public is not very well informed	2%	3%	5%	18%
I do not trust the Depot	2%	3%	6%	16%
Alert system does not work, is inadequate, or difficult to understand	2%	2%	3%	12%
Depot would try to cover up a chemical release	2%	2%	4%	16%
Local government officials would try to cover up a chemical release	2%	2%	3%	9%
Public or community is not very well informed	2%			
Don't know	1%	3%	3%	7%
Cannot hear/understand the sirens	1%	2%	2%	6%
Local government officials are not prepared	1%	2%	3%	9%
Other	1%	2%	2%	11%
There have been incidents before and we were not told	1%	2%	2%	10%
Depot is not prepared	1%	1%	2%	12%
Haven't heard/received enough information	1%			
Delay in receiving information/Delay in reporting accidents	<1%	1%	1%	5%
Don't know about what to do and how things work (general)	<1%	1%	1%	4%

 71 Multiple responses were accepted for this question.

Response for Not Confident Notified Quickly	April 2009 (n=1008)	April 2008 (n=997)	March 2007 (n=989)	April 2006 (n=982)
They will cover it up (unspecified)	<1%	<1%	1%	1%
Depot or government officials would not want to cause panic or have a false alarm	<1%		<1%	1%
I don't trust them (unspecified)	<1%		<1%	2%
I live far from the Depot	<1%		<1%	
Just feel that way/Not comfortable	<1%		<1%	1%
Depot would try to contain the accident before alerting the public		<1%	<1%	1%
I work/worked at the Depot		<1%	<1%	
Someone I know works/worked at the Depot		<1%	<1%	1%
Depends on the severity of the event				
Past experience			<1%	1%
Public is not prepared			<1%	

"Other" responses for Question 29 for Not Confident Responses:

- Anniston army depot
- Anything can go wrong (2)
- I would try clear it up before telling public
- It might come up on TV otherwise I would not know about it
- It would be killing people, killing people trying to get out
- Live by self

- News knew before employees about incident at depot
- No one would let me know
- Not paying any attention to it
- The shelter in place doesn't last more than 4 hours
- Will call the depot
- Would have to take own initiative

30. Please tell me if you agree or disagree with the following statement:

"I am able to protect myself and my family in the event of a chemical emergency."

Table 58: Responses to Question 30

Response	April 2009	April 2008	March 2007	April 2006
Agree strongly	39%	39%	36%	40%
Agree somewhat	37%	33%	36%	34%
Total "agree" responses	76%	72%	72%	74%
Disagree somewhat	14%	14%	15%	14%
Disagree strongly	10%	14%	14%	12%
Total "disagree" responses	24%	28%	29%	26%

31. Are you a member of an organization or group in Etowah County that provides assistance to people with special needs in the event of any type of emergency (severe weather, fire, chemical emergency)?

 ⁹³ The raw data was weighted to reflect the true County population proportions in all of the proportions in this

⁹³ The raw data was weighted to reflect the true County population proportions in all of the proportions in this report. For instance, there were 50 completed surveys in Clay County which were weighted back to represent approximately 0.2% of the total sample to be consistent with the actual population proportion.

Thanks for your time--we really appreciate it. May I give a phone number to call in case you have more questions about the Depot or the Chemical Stockpile Emergency Preparedness Program?

IF YES: PROVIDE PHONE NUMBER BY COUNTY. ONLY GIVE THE PHONE NUMBER THAT CORRESPONDS WITH THAT COUNTY.

- Calhoun County Emergency Management Agency 256-435-0540
- Clay County Emergency Management Agency 256-396-5886
- Cleburne County Emergency Management Agency 256-463-7130
- Etowah County Emergency Management Agency 256-549-4575
- St. Clair County Emergency Management Agency 205-884-6800
- Talladega County Emergency Management Agency 256-761-2125

ONLY GIVE INTERNET ADDRESS IF THEY HAVE ACCESS TO THE INTERNET IN QUESTION 44:

If you are interested in information on the Internet, please go to www.areyoureadygoema.com.

Thanks again!

APPENDIX B: ANNISTON EMERGENCY PLANNING ZONE CROSS TABULATIONS

This appendix contains cross tabulations from the April 2009 survey of the Chemical Stockpile Emergency Preparedness Program (CSEPP) site in Anniston, Alabama. Responses have been combined to produce categories that contain at least 30 residents for statistical purposes. Only those categories with 30 or more residents are shown in these tables. Consequently, questions where all categories had less than 30 residents are not included in this document.

In this document, respondents that named a specific emergency zone refer to only those respondents who named an alphanumeric zone. For some of the questions, multiple responses were accepted. Also, the ethnic group referred to as "other" includes Hispanics, Asian-Americans, Native Americans, and residents who belong to multiple ethnicity groups.

1. Are you aware of the chemical agents that are being destroyed at the Anniston Army Depot?

The survey sought to identify and summarize which actions residents would take if instructed to shelter in place. Sheltering-in-place is composed of a series of actions taken to make a structure safe from chemical exposure. To determine the level of knowledge of residents regarding shelter-in-place, it is important to identify which combination of shelter-in-place actions are necessary in order to shelter in place safely.

- Step 1: Stay inside, or go inside if you are outside.
- Step 2: Close all windows, fireplace dampers and doors outside and inside.
- Step 3: Turn off heating, cooling and ventilation systems.
- Step 4: Stay in an interior room or room with no windows.
- Step 5: Turn radio to EAS stations for instructions.

Table 5 shows the percentage of survey respondents who indicated they would take each of the shelter-in-place steps. They are listed in columns Step 1–Step 5. The following columns headed by Cumulative Step 2–Cumulative Step 5 (Cumulative percentages) show the percentage who indicated they would take that shelter-in-place step along with all previous steps.

32. Please tell me if you are a member of one or more of the following groups.

A cross tabulation table for Question 32 is not included in this document due to the small sample size (less than 30 respondents) of each response category for this question.

33. In the unlikely event of a chemical emergency at the Anniston Army Depot, there is a possibility that the emergency may affect Etowah County Residents. Would you consider being part of a community based support team or group to assist People with Special Needs to shelter in place or evacuate during a chemical emergency?
