

**Notice** - Public reporting burden for this collection of information is estimated to average 15 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing burden to: CDC/ATSDR Reports Clearance Officer; 1600 Clifton Road, MS D-24, Atlanta, GA 30333, ATTN: PRA (0920-0212).

**Assurances of Confidentiality** – All information which would permit identification of any individual, a practice, or an establishment will be held confidential, will be used only by NCHS staff, contractors, and agents only when required and with necessary controls, and will not be disclosed or released to other persons without the consent of the individual or the establishment in accordance with section 308(d) of the Public Health Service Act (42 USC 242m) and the Confidential Information Protection and Statistical Efficiency Act (PL-107-347).

SSS abstractors will abstract eight acute coronary syndrome records in each of 32 hospitals. A different SSS abstractor will reabstract the eight records. We expect that hospital staff will take an average of 15 minutes to pull and then refile the eight medical records (Attachment J). This equals 8 annualized hours over three years.

The questions for the acute coronary syndrome abstraction module include:

- Date and time of first hospital contact
- Troponin levels
- Ischemic pain upon admission
- Elective (planned) cardiac procedure admission
