

Attachment 23

Oral Symbol Digit Modalities Test

Name of test: Oral Symbol Digit Modalities Test (ages 8-85 years)

Estimated time burden: 2 ½ minutes

Estimated number of items: As many as possible in 2 minutes (up to 144)

Materials:

Laptop computer
Scoring Sheet (for examiner)

Description:

In this measure of processing speed, the participant will be given 120 seconds to orally match symbols with digits as quickly as possible. The key (specifying which symbols are assigned to which numbers) will be located at the top of a computer screen. The examiner will record the participant's responses directly on the computer screen or on a separate answer sheet. If the latter is used, the participant's responses will be entered into the computer by the examiner.

Administration Instructions:

Practice items:

The examiner hands the participant the practice form or points to the computer screen and says: **“Please look at the symbols at the top of the screen. Each symbol is paired with a number”** (the examiner points to the pairs and shows how they are arranged across the row).

The examiner continues: **“Now look here”** (the examiner points to the row of symbols without numbers). **“Here, there are symbols but no numbers. I would like you to tell me the number that goes with each symbol like this: You see this symbol (e.g., “O”), it is matched with the number 6 (the examiner points to the key), so you would say or tell me “6”; this next symbol (the examiner points to the “X”), is paired with an eight (point), so you would say or tell me “8”. Does this make sense? Now you try the rest**

Public reporting burden for this collection of information is estimated to average 2 1/2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: NIH, Project Clearance Branch, 6705 Rockledge Drive, MSC 7974, Bethesda, MD 20892-7974, ATTN: PRA (0925-xxxx*) EXP: (xx/xxxx). Do not return the completed form to this address.

of the row for practice. Remember to say each number out loud so that I can hear you."

The examiner should provide feedback after each response, indicating whether the response is correct with "That's right" or correcting the response when it is wrong.

After the participant has completed the practice row, say: "Good. Now that you know how to do this, I am going to ask you to do some more."

Test items:

The examiner should point to the computer screen or hand the participant the laminated response form and say: "When I tell you to start I want you to do the rest of these the same way. I want you to work as quickly as you can without skipping any of the boxes or making mistakes. When you are finished with the first row (the examiner points), move on to the next one (the examiner points). Continue until the screen goes blank. If you make a mistake, just tell me the correct answer and keep going. Ready?"

The examiner should start the on-screen timer as he/she says: "Begin".

The examiner should strike through the items on which the participant makes errors. The timer will go off after two minutes.

The examiner says to the participant: "We're now finished with that activity".

<p><u>Before going on to the next task, the examiner should score the participant's performance and enter the score into the computer. The score is obtained by subtracting the number of errors from the number of items completed in 2 minutes.</u></p>

Excerpt from screen (for participant):
