Volunteers Wanted for a Research Study

“Tools for screening of pulmonary function in children 1-8 years of age”

Doctors at the University of Miami are doing a research study to find out if young children can do simple breathing tests. The tests will help doctors learn about how children's lungs work.

Your child may qualify for the study if he/she:

- Is between 12 months and 8 years of age
- Was *not* born prematurely (before 34 weeks)
- Does *not* have asthma

During the study, parents will fill out a questionnaire. Doctors will measure the lung function of the child by asking him/her to breathe into a mouth piece or a small mask.
No blood draws involved.

Families will receive up to \$25 per child*, as well as transportation vouchers, for each study appointment

**To learn more, call the Division of Pediatric Pulmonary:
(305)243-6162**

This research study is directed by Dr Erick Forno at the
Division of Pediatric Pulmonary (1580 NW 10th Ave., 1st floor),
and/or at UM Kendall Medical Center (8932 SW 97th Ave).

**Study consists of 3 clinic visits, and total time spent will be about 3 hours*
