Wouldn't it be great....if everything could be tested **painlessly** and simply - through saliva?

Imagine the possibilities ... if saliva could be used instead of blood as a research and diagnostic specimen...

The Johns Hopkins University Center for Interdisciplinary Salivary Bioscience Research is

seeking men and non-pregnant women from ages 18 to 35 who are not currently taking prescription medications (other than birth control) for participation in a study that will help expand this cutting edge field.

Approved March 21, 2012

- Participation lasts 45 minutes and involves completing a short questionnaire and donating oral fluid, blood, and urine samples.
- Samples will be used to develop and validate assays for analytes of several different types in oral fluids.

Participants may receive \$50.00

To participate in this research study, please call 443-287-4581.

PI: Douglas Granger

Protocol No.: NA_00046518
