## What is Epi Info?

For over 25 years, Epi Info™ software has been a CDC trailblazer for innovation and application of Information Technology to public health practice. It has encouraged collaboration between local, national, and international partners, including state and territorial epidemiologists; national centers, institutes, and government offices; and foreign ministries of health and United Nations World Health Organization constituents. Epi Info™ is used around the globe for the rapid assessment of disease outbreaks, the development of continuous surveillance systems, and a wide range of community health initiatives.

Epi Info™ is a free application that allows public health and medical professionals to rapidly develop a questionnaire, customize data entry, analyze data, and create data, graphs, tables, and charts for customized reports. As part of the CDC's supported data tools, Epi Info™ 7 provides interactive Analysis, Visualization, and Reporting (AVR) with many PHIN compliant surveillance systems.

## How Can Epi Info be Used?

Epi Info™ v7 allows users to:

- Rapidly create data collection instruments and data analysis, visualization, and reporting
- Educate public health professionals learning epidemiology
- Easily collaborate between local, national, and international partners

In addition, Epi Info™ v7 is:

- Available worldwide
- Translatable (version 3.5.3 was translated by the user community into multiple languages)
- Public Health Information Network (PHIN) and other data source compliant

## The Need for Epi Info

The Epi Info™ team has received many requests for support and training from public health professionals across the country and around the world. Economic realities have required many states and countries to rethink how much they pay for software licenses, technical support, and computer hardware. Their reflections appear to have brought them back to the tried and proven Epi Info™ for their collection, analysis, and presentation of epidemiologic data.
