ELECTRONIC REPORTING SPECIFICATIONS FOR FORM CMS-265-11  
TABLE 1 - RECORD SPECIFICATIONS

Table 1 specifies the standard record format to be used for electronic cost reporting. Each electronic cost report submission (file) has four types of records. The first group (type 1 records) contains information for identifying, processing, and resolving problems. The text used throughout the cost report for variable line labels (e.g., Worksheet A) and variable column headers (Worksheet B-1) is included in the (type 2 records). Refer to Table 5 for cost center coding. The data detailed in Table 3 are identified as (type 3 records). The encryption coding at the end of the file, records 1, 1.01, and 1.02, are (type 4 records).

The medium for transferring cost reports submitted electronically to contractors is a 3½" diskette, CD, or a flash drive. The disk must be in IBM format. The character set must be ASCII. You must seek approval from your contractor regarding alternate methods of submission to ensure that the method of transmission is acceptable.

The following are requirements for all records:

1. All alpha characters must be in upper case.
2. For micro systems, the end of record indicator must be a carriage return and line feed, in that sequence.
3. No record may exceed 60 characters.

Below is an example of a Type 1 record with a narrative description of its meaning.

Record #1: This is a cost report file submitted by Provider CCN 272599 for the period from January 1, 2011 (2011001) through December 31, 2011 (2011365). It is filed on Form CMS-265-11. It is prepared with vendor number A99's PC based system, version number 1. Position 38 changes with each new test case and/or approval and is an alpha character. Positions 39 and 40 remain constant for approvals issued after the first test case. This file is prepared by the ESRD facility on May 15, 2012 (2012136). The electronic cost report specification dated January 1, 2011 (2011001), is used to prepare this file.

The type 2 records contain text that appears on the printed cost report. Of these, there are three groups: (1) Worksheet A cost center names (labels); (2) column headings for step-down entries; and (3) other text appearing in various places throughout the cost report.

A Worksheet A cost center label must be furnished for every cost center with cost or charge data anywhere in the cost report. The line and sub-line numbers for each label must be the same as the line and sub-line numbers of the corresponding cost center on Worksheet A. The columns and sub-column numbers are always set to zero.

Column headings for the General Service cost centers on Worksheets B and B-1 are supplied once. They consist of one to three records. Each statistical basis shown on Worksheet B-1 is also to be reported. The statistical basis consists of one or two records (lines 4-5). Statistical basis code is supplied only to Worksheet B-1 columns and is recorded as line 6. The statistical code must agree with the statistical bases indicated on lines 4 and 5, i.e., code 1 = square footage, code 2 = dollar value, and code 3 = all others. Refer to Table 2 for the special worksheet identifier to be used with column headings and statistical basis and to Table 3 for line and column references.

RECORD NAME: Type 4 Records - File Encryption

This type 4 record consists of 3 records: 1, 1.01, and 1.02. These records are created at the point in which the ECR file has been completed and saved to disk and insures the integrity of the file.

TABLE 2 - WORKSHEET INDICATORS

This table contains the worksheet indicators that are used for electronic cost reporting. A worksheet indicator is provided for only those worksheets for which data are to be provided.

The worksheet indicator consists of seven digits in positions 2-8 of the record identifier. The first two digits of the worksheet indicator (positions 2 and 3 of the record identifier) always show the worksheet. The third digit of the worksheet indicator (position 4 of the record identifier) is always 0. For Worksheets A-1 and A-2, if there is a need for extra lines on multiple worksheets, the fifth and sixth digits of the worksheet indicator (positions 6 and 7 of the record identifier) identify the page number. The seventh digit of the worksheet indicator (position 8 of the record identifier) represents the worksheet or worksheet part.

FOOTNOTES:

(a) Multiple Worksheets for Reclassifications and Adjustments Before Stepdown

The fifth and sixth digits of the worksheet indicator (positions 6 and 7 of the record) are numeric from 01-99 to accommodate reports with more lines on Worksheets A-1. For reports that do not need additional worksheets, the default is 01. For reports that do need additional worksheets, the first page is numbered 01. The number for each additional page of the worksheet is incremented by 1.

TABLE 3 - LIST OF DATA ELEMENTS WITH WORKSHEET, LINE, AND COLUMN  
DESIGNATIONS

This table identifies those data elements necessary to calculate an ESRD cost report. It also identifies some figures from a completed cost report. These calculated fields (e.g., Worksheet B, column 8) are needed to verify the mathematical accuracy of the raw data elements and to isolate differences between the file submitted by the ESRD facility and the report produced by the contractor. Where an adjustment is made, that record must be present in the electronic data file. For explanations of the adjustments required, refer to the cost report instructions.

Table 3 "Usage" column is used to specify the format of each data item as follows:

|           |   |
|-----------|---|
| 9         | Numeric, greater than or equal to zero.   |
| -9        | Numeric, may be either greater than, less than, or equal to zero.   |
| 9(x).9(y) | Numeric, greater than zero, with x or fewer significant digits to the left of the decimal point, a decimal point, and exactly y digits to the right of the decimal point. |
| X         | Character.  |

Consistency in line numbering (and column numbering for general service cost centers) for each cost center is essential. The sequence of some cost centers does change among worksheets.

Table 3 refers to the data elements needed from a standard cost report. When a standard line is subscripted, the subscripted lines must be numbered sequentially with the first sub-line number displayed as "01" or "1" (with a space preceding the 1) in field locations 14-15. It is unacceptable to format in a series of 10, 20, or skip sub-line numbers (i.e., 01, 03), except for skipping sub-line numbers for prior year cost center(s) deleted in the current period or initially created cost center(s) no longer in existence after cost finding. Exceptions are specified in this manual. For Other (specify) lines, i.e., Worksheet settlement series, all subscripted lines should be in sequence and consecutively numbered beginning with subscripted line number 01. Automated systems should reorder these numbers where providers skip or delete a line in the series.

Drop all records with zero values from the file. Any record absent from a file is treated as if it were zero.

All numeric values are presumed positive. Leading minus signs may only appear in data with values less than zero that are specified in Table 3 with a usage of "-9". Amounts that are within preprinted parentheses on the worksheets, indicating the reduction of another number, are reported as positive values.

TABLE 5 - COST CENTER CODING

INSTRUCTIONS FOR PROGRAMMERS

Cost center coding is required because there are thousands of unique cost center names in use by providers. Many of these names are peculiar to the reporting provider and give no hint as to the actual function being reported. Using codes to standardize meanings makes practical data analysis possible. The method to accomplish this must be rigidly controlled to assure accuracy.

For any added cost center names (the preprinted cost center labels must be pre-coded), preparers must be presented with the allowable choices for that line or range of lines from the lists of standard and nonstandard descriptions. They then select a description that best matches their added label. The code associated with the matching description, including increments due to choosing the same description more than once, will then be appended to the user's label by the software.

Additional guidelines are:

- Do not allow any pre-existing codes for the line to be carried over.
- Do not pre-code all "Other" lines.
- For cost centers, the order of choice must be standard first, then specific nonstandard, and finally the nonstandard "Other . . ."
- For the nonstandard "Other . . .", prompt the preparers with, "Is this the most appropriate choice?," and then offer the chance to answer yes or to select another description.
- Allow the preparers to invoke the cost center coding process again to make corrections.
- For the preparers' review, provide a separate printed list showing their added cost center names on the left with the chosen standard or nonstandard descriptions and codes on the right.
- On the screen next to the description, display the number of times the description can be selected on a given report, decreasing this number with each usage to show how many remain. The numbers are shown on the cost center tables.
- Do not change standard cost center lines, descriptions and codes. The acceptable formats for these items are listed on page 42-524 of the Standard Cost Center Descriptions and Codes. The proper line number is the first two digits of the cost center code.

INSTRUCTIONS FOR PREPARERS

Coding of Cost Center Labels

Cost center coding standardized the meaning of cost center labels used by health care providers on the Medicare cost reporting forms. The use of this coding methodology allows providers to continue to use their labels for cost centers that have meaning within the individual institution.

The four digit codes that are required to be associated with each label provide standardized meaning for data analysis. Normally, it is necessary to code only added labels because the preprinted standard labels are automatically coded by CMS approved cost report software.

Additional cost center descriptions have been identified. These additional descriptions are hereafter referred to as the nonstandard labels. Included with the nonstandard descriptions is an "Other . . ." designation to provide for situations where no match in meaning can be found. Refer to Worksheet A, line 17, 25 or 26.

TABLE 5 - COST CENTER CODING

Both the standard and nonstandard cost center descriptions along with their cost center codes are shown on Table 5. The "use" column on that table indicates the number of times that a given code can be used on one cost report. You are required to compare your added label to the descriptions shown on the standard and nonstandard tables for purposes of selecting a code. Most CMS approved software provides an automated process to present you with the allowable choices for the line/column being coded and automatically associates the code for the selected matching description with your label.

#### Additional Guidelines

##### Categories

Make a selection from the proper category such as general service description for general service lines, nonreimbursable cost center descriptions for nonreimbursable cost center lines, etc.

##### Use of a Cost Center Coding Description More Than Once

Often a description from the "standard" or "nonstandard" tables applies to more than one of the labels being added or changed by the preparer. In the past, it was necessary to determine which code was to be used and then increment the code number upwards by one for each subsequent use. This was done to provide a unique code for each cost center label. Now, most approved software associate the proper code, including increments as required, once a matching description is selected. Remember to use your label. You are matching to CMS's description only for coding purposes.

##### Cost Center Coding and Line Restrictions

Use cost center codes only in designated lines in accordance with the classification of cost center(s), e.g., lines 22 through 26 may only contain cost center codes within the nonreimbursable services cost center category of both standard and nonstandard coding. Refer to Table 1 for Type 2 cost center descriptions.

ELECTRONIC REPORTING SPECIFICATIONS FOR FORM CMS-265-11  
TABLE 6 - EDITS

Medicare cost reports submitted electronically are subjected to various edits, which are divided into two categories: Level I and Level II edits. These include mathematical accuracy edits, certain minimum file requirements, and other data edits. Any vendor software that produces an electronic cost report file for Medicare ESRD must automate all of these edits. Failure to properly implement these edits may result in the suspension of a vendor's system certification until corrective action is taken. The vendor's software should provide meaningful error messages to notify the home health agency of the cause of every exception. The edit message generated by the vendor systems must contain the related 4 digit and 1 alpha character, where indicated, reject/edit code specified below. Any file containing a level I edit will be rejected by your contractor without exception.

Level I edits (1000 series reject codes) test that the file conforms to processing specifications, identifying error conditions that would result in a cost report rejection. These edits also test for the presence of some critical data elements specified in Table 3. Level II edits (2000 series edit codes) identify potential inconsistencies and/or missing data items that may have exceptions and should not automatically cause a cost report rejection. Resolve these items and submit appropriate worksheets and/or data supporting the exceptions with the cost report. Failure to submit the appropriate data with your cost report may result in payments being withheld pending resolution of the issue(s).

The vendor requirements (above) and the edits (below) reduce both intermediary processing time and unnecessary rejections. Vendors should develop their programs to prevent their client home health agencies from generating either a hard copy substitute cost report or electronic cost report file where level I edits exist. Ample warnings should be given to the provider where level II edit conditions are violated.

**NOTE:** Dates in brackets [ ] at the end of an edit indicate the effective date of that edit for cost reporting periods ending on or after that date. Dates followed by a "b" are for cost reporting periods beginning on or after the specified date. Dates followed by an "s" are for services rendered on or after the specified date unless otherwise noted. [10/31/2000]
