The summary below describes the nature of the information collection requirement (ICR) and the expected burden for the ICR being submitted for clearance by OMB as required by the PRA.

Title: Inspection Brake System Safety Standards for Freight and Other Non-Passenger Trains and Equipment (Power Brakes and Drawbars).

OMB Control Number: 2130–0008.

Type of Request: Extension of a currently approved collection.

Affected Public: Businesses.

Abstract: Section 7 of the Rail Safety Enforcement and Review Act of 1992, Public Law 102–365, amended Section 202 of the Federal Railroad Safety Act of 1970 (45 U.S.C. 421, 431 *et seq.*), empowered the Secretary of Transportation to conduct a review of the Department's rules with respect to railroad power brakes and, where applicable, prescribe standards regarding dynamic brake equipment. In keeping with the Secretary's mandate and the authority delegated from him to the FRA Administrator, FRA issued revisions to the regulations governing freight power brakes and equipment in October 2008 by adding a new Subpart addressing electronically controlled pneumatic (ECP) brake systems. The revisions are designed to provide for and encourage the safe implementation and use of ECT brake system technologies. These revisions contain specific requirements relating to design, interoperability, training, inspection, testing, handling defective equipment and periodic maintenance related to ECP brake systems. The final rule also identifies provisions of the existing regulations and statutes where FRA is proposing to provide flexibility to facilitate the voluntary adoption of this advanced brake system technology. The collection of information is used by FRA to monitor and enforce current regulatory requirements related to power brakes on freight cars as well as the recently added requirements related to ECP brake systems. The collection of information is also used by locomotive engineers and road crews to verify that the terminal air brake test has been performed in a satisfactory manner.
