Attachment 3d Clinic Survey

Public reporting burden of this collection of information is estimated to average 40 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: CDC, Project Clearance Officer, 1600 Clifton Road, MS D-24, Atlanta, GA 30333, ATTN: OMB PRA (0920-XXXX). Do not send the completed form to this address.

General programming notes (additional programming notes are located throughout the questionnaire):

- 1) Every question should require a response to move forward in the application unless otherwise noted.
- 2) Use the following values: .D = 8, .R = 7, NA = 6.
- 3) Add a questionnaire type variable (one for the standard version and one for the short version).
- 4) For all “other-specify” variables in “check all that apply” questions, use the “other” variable name (which should end in “O”) and add an “S” on the end. If the variable name becomes too long, then drop the letter immediately preceding the consecutive letter at the end of the **main part** of the variable name. For example, if the “other” variable is named “**KINDG_9O**”(where *KIND* is the stem variable name and *G* denotes the lettered response option) the “specify” variable should be named “**KING_9OS**”
- 5) Programming notes are not included in the application; they are merely there to help with coding.
- 6) Interviewer instructions and inconsistency checks are notes for the interviewers, but may also include coding instructions.
- 7) Code book should have a brief description of the variable. This includes all calculated variables.
- 8) Calculate version number using variable name VERSION.
- 9) Calculate data collection cycle using variable name CYCYR. CYCYR = 2011.
- 10) For all date variables also create an automatic variable that is a copy of the date variable. For example, if the variable for date was called DATE, then the automatic variable would look like: a. variable name: TXFORM, b. type of date: String Expression, c. numeric calculation/string expression: DATE
- 11) Label module sections in the code book. Use the Table of Contents for guidance.
- 12) Calculate the time to conduct an interview from D1 to C13a or C13b.
- 13) Do not include the Response Cards and calendars in the program.
- 14) Distinguish between English and Spanish versions of the questionnaires (note this is different than the language variable used in the short questionnaire).
