Diabetes Prevention Recognition Program

The CDC Diabetes Prevention Recognition Program (DPRP) is a key component of the [National Diabetes Prevention Program](#). The purpose of the DPRP is to recognize organizations that have demonstrated their ability to effectively deliver a proven diabetes prevention lifestyle intervention. The recognition program helps to assure that decisions about individual participation, patient referral, and health insurance benefits are based on accurate, reliable, and trustworthy information.

The DPRP assures the quality of recognized programs and provides standardized reporting on their performance. The DPRP standards for diabetes prevention lifestyle interventions and requirements for recognition are based on the successful U.S. Diabetes Prevention Program research trial, led by the National Institutes of Health, the largest clinical trial of lifestyle intervention for prevention of type 2 diabetes ever conducted.
