RE: Standards for Business Practices of Interstate Natural Gas Pipelines (Docket No. RM 96-1 et al)

Dear Ms. Bose:

The North American Energy Standards Board ("NAESB") herewith submits this report to the Federal Energy Regulatory Commission ("FERC" or "Commission") regarding NAESB's activities from October 2009 to January 2011 with respect to the adoption of Version 2.0 of the NAESB Wholesale Gas Quadrant ("WGQ") standards. The NAESB WGQ Version 2.0 standards were ratified by the WGQ membership and were published February 10, 2011, and are provided herein and include minor corrections applied on January 2 and February 3, 2011. An executive summary of the changes which resulted in Version 2.0 is included in the attached report, along with a list of the standards that were created or modified as part of Version 2.0.

Some of the standards development activity undertaken that produced Version 2.0 had considerable industry debate before an agreement was reached on the level of standardization needed and the actual text of the standards themselves. NAESB supports a wide range of perspectives through a public process permitting all segments of the marketplace to equally voice their positions. As part of that process, balanced voting allows a disparate group to move towards consensus.

All requests for new standards or modifications to existing standards and requests for interpretation are posted on the NAESB home page. All work papers and recommendations from subcommittees and task forces regarding the requests are also posted on the NAESB home page ([www.naesb.org](http://www.naesb.org)). The task forces and subcommittees are where requests are addressed and recommended standards are formulated. Participation and voting in NAESB at the subcommittee and task force level is open to any interested party regardless of membership. Should a participant be unable to attend a meeting where a request of interest is discussed, the party may prepare written comments, which will be posted as work papers for the subcommittee or task force.

The Executive Committee meetings where these standards were discussed and adopted took place from October 2009 to October 2010. The minutes of these meetings are provided as links, which include the voting records of the Executive Committee. The ratification ballots and member ratification voting record results are also included as links. All comments that were filed on the standards as part of the NAESB formal comment period are also included as links.

The cover letter, report and enclosures are being filed electronically as a single document in Microsoft® Word® 2003 and also in Adobe Acrobat® Portable Document Format (.pdf), with each enclosure bookmarked separately. The filing is also available on the NAESB web site ([www.naesb.org](http://www.naesb.org)). Please feel free to call me at (713) 356-0060 or refer to the NAESB website ([www.naesb.org](http://www.naesb.org)) should you have any questions or need additional information regarding the NAESB WGQ Version 2.0 standards.

**REPORT OF THE NORTH AMERICAN ENERGY STANDARDS BOARD**

The North American Energy Standards Board ("NAESB") is voluntarily submitting this report in accordance with the Commission's Order No. 587<sup>1</sup> in the above referenced docket. The report includes a summary of the changes that resulted in Version 2.0 of the Wholesale Gas Quadrant ("WGQ") standards, along with a list of the standards that were created or modified as part of Version 2.0 -- cross-referenced both by request number and by version. The standards can be downloaded from the NAESB home page ([www.naesb.org](http://www.naesb.org)).

In January 2002, the Gas Industry Standards Board ("GISB") became the WGQ of NAESB. GISB Version 1.5 standards were adopted by the WGQ of NAESB as NAESB WGQ standards. Version 1.6 standards were adopted by the WGQ and published July 31, 2002<sup>2</sup>. Version 1.7 Standards were adopted by the WGQ and published on December 31, 2003<sup>3</sup>. Version 1.8 standards were adopted by the WGQ and published on September 30, 2006<sup>4</sup>. Version 1.9 standards were adopted by the WGQ and published on September 30, 2009<sup>5</sup> and the Version 2.0 standards have been adopted by the WGQ and were published on November 30, 2010 and minor corrections were applied on January 2 and February 3, 2011.

There are six enclosures supporting the report. Provided in appendix A is a list of the links to the minutes from the Executive Committee ("EC") meetings during which recommendations were considered that resulted in Version 2.0 of the NAESB WGQ standards. The EC minutes include discussion of recommendations from task forces and subcommittees, which ultimately resulted in the standards for Version 2.0. The EC voting records are attached as part of the minutes. Also included in appendix A, is the list of links to all comments filed on the standards that were recommended for adoption to the EC. Provided in appendix B is the list of links to the NAESB membership ratification ballots, which include the EC adopted recommendations that are the basis for the Version 2.0 changes. Also provided in this appendix is the list of links to the ratification results. Appendix C provides the list of available transcripts. Appendix D provides an overview of the NAESB process by which the standards were adopted. Provided in appendix E is the 2009<sup>6</sup> and 2010<sup>7</sup> WGQ Annual Plans. Appendix F contains the minor corrections applied to Version 2.0

### VERSION 2.0 SUMMARY

Presented here is a summary of the activities<sup>8</sup> that led to the compilation of the NAESB WGQ Standards Version 2.0. All references in this summary pertain only to the WGQ. Supporting documents can be found in appendices A, B, C, D, E and F as enclosures to this report. All Version 2.0 standards that were added or modified are contained in a table following this summary. The table cross references the standards to the related requests for development and the actions that were taken.

Several of the development efforts in NAESB reflect the work of multiple quadrant or market interests. For example, the change of the term Power Plant Operator to Power Plant Gas Coordinator, as well as minor corrections to the joint effort related to the e-Tariff standards. These cross-quadrant collaborations are not only permitted in the NAESB process, but also encouraged when standards are applicable to multiple markets. With multiple quadrants joint development, the groups work together to ensure that the standards developed are consistent and there is the added benefit that the standards are vetted in a broader community.

Some of the standards development activity undertaken that produced Version 2.0 had considerable industry debate before an agreement was reached on the level of standardization needed and the actual text of the standards themselves. The NAESB process supports a wide range of perspectives, and through a public process permitting all segments of the marketplace to voice equally their issues, balanced voting allows a disparate group to move toward consensus. As such, NAESB was able to produce standards to support the customer security administration (CSA) process, Electronic Delivery Mechanism (EDM), Gas-Electric Interdependency, the FERC Strategic Plan and technical standards.

Much of the effort that comprised the changes for Version 2.0 was classified as maintenance. This work, exacting and detailed, is crucial to ensuring that the large body of standards applicable to the WGQ reflect current market practices. Often, maintenance does not have the panache or attraction of new development, but that does not detract from its importance. Without the maintenance of the standard transactions – the information requirements, coding, formatting, mapping and usage, the transactions would become out-dated – not reflective of new or modified services. From the explanations shown below for the types of maintenance undertaken, the introduction of a new or modified service, the addition of specificity, or more functionality translates into changes to data sets that describe a transaction.

The summary is organized into seven sections: Standards to support Gas Electric Interdependency, Capacity Release re-design due to elimination of EDI for Capacity Release Upload Transactions, standards to support CSA Process, standards to support EDM, standards drafted in response to FERC strategic plan, maintenance and minor corrections. Descriptions of each grouping are shown below:

<sup>7</sup> 2010 WGQ Annual Plan, available at [http://www.naesb.org/pdf4/wgq\\_2010\\_annual\\_plan.doc](http://www.naesb.org/pdf4/wgq_2010_annual_plan.doc) (December 9, 2010).

<sup>8</sup> The Version 2.0 publication of the WGQ Standards can be reviewed through the final actions and minor corrections applied to Version 1.9 in the schedule shown in the following link: [http://www.naesb.org/misc/wgq\\_publication\\_schedule\\_ver2\\_0.doc](http://www.naesb.org/misc/wgq_publication_schedule_ver2_0.doc)

### **Standards to Support Gas-Electric Interdependency**

The standards to support gas-electric interdependency originated from Request No. R08020 and provide for enhanced granularity for public utilities identifying critical operational flow orders. The final action modifies NAESB WGQ Standard Nos. 4.3.28, 4.3.29, 5.3.38 and modifies the data elements, technical implementation and code values for WGQ Standard No. 5.4.16. The final action also adds two new standards, NAESB WGQ Standard Nos. 5.3.70 and 5.3.71. The modifications resulted in an additional 15 notice types and modified the Technical Implementation of Business Processes and sample paper transaction. The changes were made to allow Transportation Service Providers the flexibility to communicate additional clarity beyond the currently defined notice types. The recommendation was adopted by the WGQ EC on February 4, 2010 and ratified by membership on June 23, 2010.

### **Standards created for Capacity Release re-design due to elimination of EDI for Capacity Release Upload Transactions**

WGQ 2010 Annual Plan Item 3, related to the standards created for Capacity Release re-design due to the elimination of EDI for Capacity Release Upload, was approved by the WGQ EC on August 19, 2010 and ratified by membership on September 27, 2010. The standards add three additional Capacity Release related standards – WGQ Standard Nos. 5.3.70, 5.3.71 and 5.3.72. They also add four new Capacity Release related standards data sets, NAESB WGQ Standard No. 5.4.24 – Offer, WGQ Standard No. 5.4.25 – Bid, WGQ Standard No. 5.4.26 – Award Download, and WGQ Standard No. 5.4.27 – Withdrawal Download. They delete 14 Capacity Release related standards data sets, WGQ Standards No.s 5.4.1, 5.4.2, 5.4.3, 5.4.4, 5.4.5, 5.4.6, 5.4.7, 5.4.8, 5.4.9, 5.4.10, 5.4.11, 5.4.12, 5.4.18, and 5.4.19. Through this significant effort, the electronic transactions in support of the capacity release program are streamlined.

### **Standards to support Electronic Delivery Mechanism (EDM)**

The standards to support EDM originated from 2010 WGQ Annual Plan Item 5, and Request Nos. R09025 and R10001. 2010 WGQ Annual Plan Item 5 modifies the Quadrant Electronic Delivery Mechanism (QEDM) Manual, in particular it modifies the technical characteristics set forth in Appendices B, C and D. Request No. R09025 modifies WGQ Standard Nos. 4.3.101 and 4.3.102. Request No. R10001 updates the NAESB WGQ QEDM Manual to add the ability to provide Informational Postings report downloads in a comma-separated-value (CSV) file format. The recommendations were adopted by the WGQ EC on August 19, 2010 and ratified by membership on September 27, 2010. These changes were undertaken to ensure NAESB's technical standards remain current.

### **Standards to support Customer Security Administration (CSA) Process**

The customer security administration process standard originated from Request No. R08008 and WGQ 2010 Annual Plan Item 4 and added NAESB WGQ Standard No. 4.3.100, which reflects the ability of Service Requesters to obtain security information for that party's users that have access to the Transportation Service Provider's system. The standard was approved by the WGQ EC on August 19, 2010 and ratified by membership on September 27, 2010.

### **Standards drafted in response to FERC strategic plan**

The standards modifications originating from Request No. R09014 and WGQ 2010 Annual Plan Item 6 are related to the 2010 FERC strategic plan. The modification to WGQ Standard No. 4.3.23 adds “Regulatory (when applicable) and subcategories “Waste Heat” as well as identifying when the new “Regulatory” category is applicable. The standards were approved by the WGQ EC on October 5, 2010 and ratified by membership on November 5, 2010.

## Maintenance

Work continues on requests to create new, modify existing, or delete existing business practices, information requirements, code value assignments, technical implementation and mapping or interpretations. Such work is classified and assigned by business function to more efficiently process the requests through the various subcommittees and task forces.

Modifications of the standards were undertaken to more accurately reflect the workings of the market and specific efforts are noted below:

- R99033/R96018/R04038 – The standards delete NAESB WGQ Standard Nos. 5.3.17 and 5.4.13. They also modify NAESB WGQ Additional Standards Manual to modify the following items
  - Modify the Executive Summary, Business Processes and Practices Sections A and C of the manual to reflect the addition of the following standards and data sets.
  - Add EC Approved NAESB WGQ Standards No. – 0.3.18, 0.3.19, 0.3.20 and 0.3.21 (from R99033) and Proposed NAESB WGQ Standard 0.3.22 (from R96018) in Section C - Topic Specific Standards Section of the Business Process and Practices.
  - Add NAESB WGQ Standard No. 0.4.2 – Operational Capacity – Technical Implementation of Business Process, Sample Paper, Data Dictionary and Code Values Dictionary.
  - Add NAESB WGQ Standard No. 0.4.3 – Unsubscribed Capacity – Technical Implementation of Business Process, Sample Paper, Data Dictionary and Code Values Dictionary.
- Modify NAESB WGQ Capacity Release Manual:
  - Modify the Executive Summary and the Business Processes and Practices Sections of the manual to reflect the deletion of NAESB WGQ Standard No. 5.4.13.
  - Modify NAESB WGQ Standard No. 5.4.14 – Upload of Request for Download of Posted Data Sets – Technical Implementation of Business Process and Code Values Dictionary.
  - Modify NAESB WGQ Standard No. 5.4.15 – Response to Upload of Request for Download of Posted Data Sets - Technical Implementation of Business Process and Code Values Dictionary.
- Modify the following NAESB WGQ Manuals to update the HTTP transaction set Code Values Table to delete the one and add the two new proposed and data sets discussed above:
  - Additional Standards Manual
  - Nominations Related Standards Manual
  - Flowing Gas Related Standards Manual
  - Invoicing Related Standards Manual
  - Capacity Release Related Standards Manual

The standards were approved by the WGQ EC on August 19, 2010 and ratified by membership on September 27, 2010.

- R09006 – The standards modify the definition for the data element Service Requestor Contract Number in NAESB WGQ Standard No. 3.4.1 and modify the Service Requestor Level Charge / Allowance Invoice for NAESB WGQ Standard No. 3.4.4. The standards were approved by the WGQ EC on August 19, 2010 and ratified by membership on September 27, 2010

These changes were applied in order to provide the ability to clearly identify information at a contract level.

- R09021/R09022 – The standards modify the Transportation / Sales Invoice for NAESB WGQ Standard No. 3.4.1 as follows:

- Change the usage of the data element 'Charge Type' from MA to SO
- Add the sender's option data element 'Miscellaneous Notes'
- Modify the definition of the data element 'Notes Codes'
- Modify the technical implementation to accommodate the above changes
- Modify the Service Requester Level/Charge Allowance Invoice – NAESB WGQ Standard No. 3.4.4 as follows:
  - Add the sender's option data element 'Miscellaneous Notes'
  - Modify the technical implementation to accommodate the above changes

The standards were approved by the WGQ EC on August 19, 2010 and ratified by membership on September 27, 2010. These standards will be used to communicate additional information concerning a particular Invoice Line Number charge. They also clarify the Data Dictionary and the Technical Implementation Guide.

- R09011 – The standards modify NAESB WGQ definition 0.2.1 – Power Plant Operator to Power Plant Gas Coordinator, NAESB WGQ definition 0.2.2. – Power Plant Operator's Facility to Power Plant Gas Coordinator Facility and NAESB WGQ definition 0.2.3 – Balancing Authority. The standards also add NAESB WGQ definition 0.2.z1 – Reliability Coordinator. They also modify NAESB WGQ Standard Nos. 0.3.11, 0.3.12, 0.3.13, 0.3.14 and 0.3.15 to conform with the above definition changes. The standards were accepted by the WGQ EC on June 4, 2010 and ratified by membership on July 15, 2010. The purpose of this change is to provide enough distinction between the NAESB and NERC terms to avoid confusion between a NAESB Power Plant Operator and the NERC Generator Operator.
- R09001 – The standards modify NAESB WGQ Standard No. 5.4.22 – Transactional Reporting – Interruptible Transportation as follows:
  - Modify the condition for data elements Location Data and Special Terms & Miscellaneous Notes,
  - Add data elements Location Indicator Data and Negotiated Rate Indicator and corresponding code values, and
  - Modify the Technical Implementation of Business Practices.

The standards were approved by the WGQ EC on February 4, 2010 and ratified by membership on June 23, 2010. The changes were applied to allow for more correct transactional reports on interruptible contracts.

### **Minor Corrections**

According to the Bylaws of NAESB, Minor clarifications and corrections to existing standards include: (a) clarifications or corrections made by a regulatory agency to standards that are of a jurisdictional nature, or by the American National Standards Institute or its successor; (b) clarifications or corrections to the format, appearance, or descriptions of standards in standards documentation; (c) clarifications or corrections to add code values to tables; and (d) clarifications and corrections that do not materially change a standard. There are 37 minor corrections included in this report, eight of which are modifications to existing codes values and 29 are minor corrections.

## LIST OF NEW STANDARDS, STANDARDS MODIFICATIONS AND INTERPRETATIONS FOR VERSION 2.0

### Request Cross Reference:

The request cross reference lists each standard either modified or created in Version 2.0, its description, the request that instigated the change, and a brief description of the change itself. If the change was originated through a minor correction, the date of the minor correction is given. The table is sorted by standard numbering shown below. If a standards manual is noted, it is for the set of standards that directly follow and is indicated by the series of standards within the manual.

The standards follow a numbering convention which is x.y.z:

x	0	-	Additional Standards
	1	-	Nominations Related Standards
	2	-	Flowing Gas Related Standards

### Version Cross Reference:

The Version Cross Reference lists each NAESB standard number followed by four columns. The column entitled “Adopted” identifies for which version the standard was adopted. The column entitled “revised” identifies versions where the standard was revised. The column entitled “interpreted version” identifies versions where the standard was interpreted. The last column “interpretation Number” identifies the interpretations number for the version specified in the previous column. The language of the standards themselves can be accessed from the NAESB home page ([www.naesb.org](http://www.naesb.org)). With the Version Cross Reference, a determination can be made of all standards that were created, changed or interpreted for a given version.

For standards that were created in Version 2.0, the “Adopted” column will contain the value “2.0.” For standards that were modified in Version 2.0, the “revised” column will contain the value “2.0.” A standard may have multiple revisions specified. For standards that were interpreted in Version 2.0, the “Interpreted Version” column will include the value “2.0” and the “Interpretation Number” column will contain the related interpretation number. A standard may have multiple interpretations specified. The Version Cross Reference also contains models, which are not standards. Models can be determined by the second of the three numbers, which make up a standard number. Models are numbered “x.5.z”, following the above numbering convention.

The versions noted in the version cross reference are:

## **The NAESB Standards Development Process**

NAESB is focused on proposing, considering, and adopting voluntary standards and model business practices that will have a significant and lasting impact on all aspects of the natural gas and electricity marketplaces. As a result of the standards NAESB adopts, it is expected that the industry will operate more efficiently and effectively, benefiting both the industry and its customers. At the same time, it must be acknowledged that NAESB standards may constitute a change in the way parties do business, with an accompanying effect on the use and allocation of resources.

NAESB's policy is to move at a deliberate pace, consistent with its annual plan(s), thus permitting those affected by its standards, especially those standards adopted as regulations by the Federal Energy Regulatory Commission (FERC) or other regulatory bodies, to assimilate them as part of their business practices. To this end, NAESB will carefully consider whether proposed standards are both timely and necessary. In particular, it will try to avoid adopting and implementing new standards, however beneficial, before the industry is able to reasonably make use of them.

The standards development process is governed by the annual plan, and items can be included in the plan or modified only with Board approval. The plan typically reflects requests from NAESB members, government agencies, and other interested parties. In approving the annual plan, the Board considers the availability of resources, including the NAESB budget and staff and the availability of industry volunteers. New requests received throughout the year are either considered part of the existing annual plan or as new items that require Board approval.

The standards development process begins with an annual plan item or a triaged and approved request. Triage is a process used by each quadrant of the Executive Committee (EC) to determine whether a request is within scope, which quadrant(s) it applies to, which subcommittee(s) it should be referred to, and what priority it should be assigned. Triage is carried out by EC members appointed by the EC chair. Triage recommendations are submitted to the en banc EC and require EC approval, and may also require Board approval if there are scope questions or if a modification of the annual plan is required.

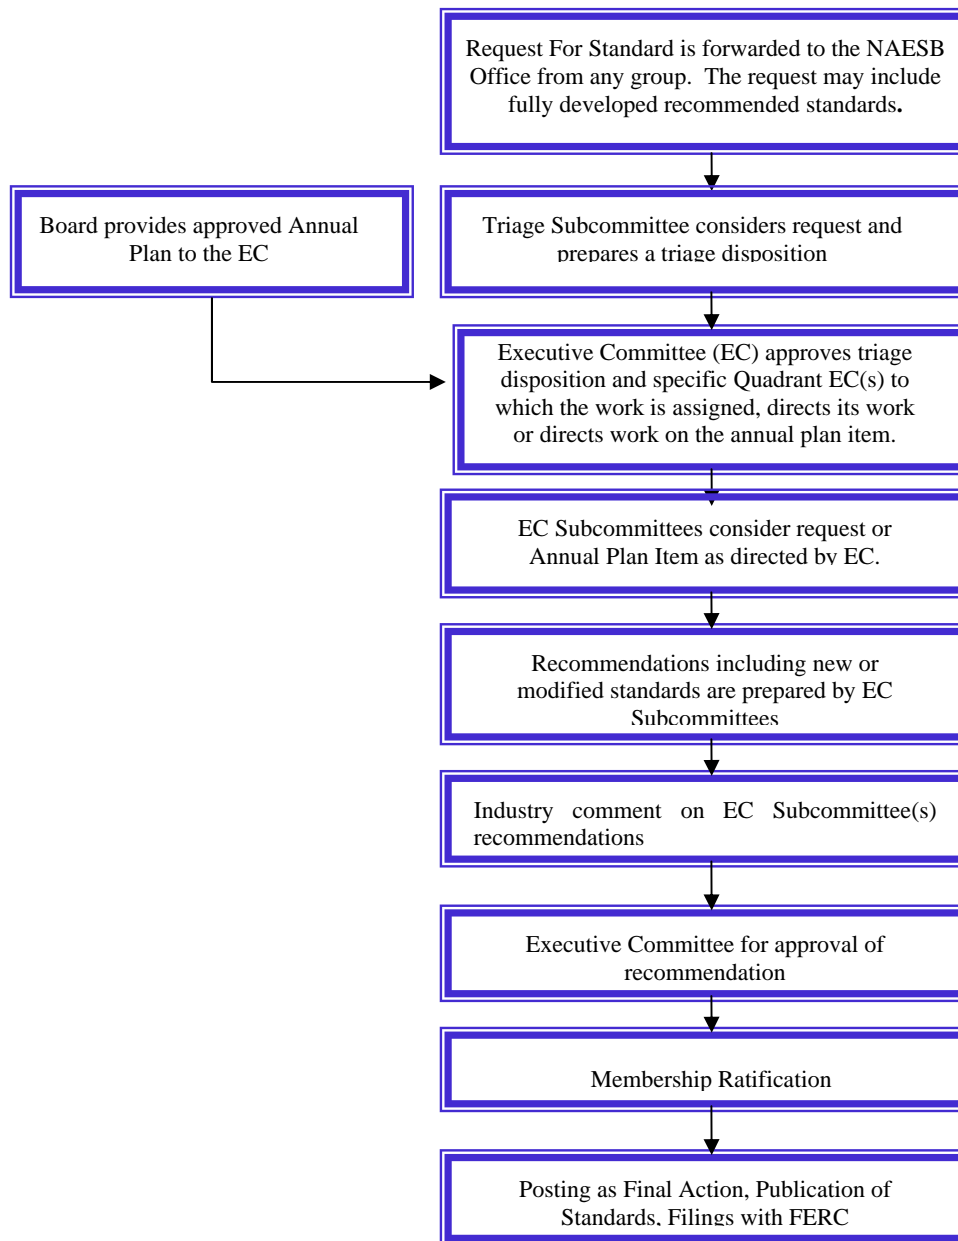

Once the triage process is completed, the subcommittees—more than one are normally involved in standards recommendations—review the request, compare it to existing standards, and prepare recommendations that may take the form of new or modified standards or interpretations. Participation in EC subcommittees is open to any interested party regardless of membership status. All subcommittee participants may vote; voting is balanced by segment and quadrant. All votes are public.

When the recommendation is complete, it is made available for a thirty-day industry comment period. The recommendation and comments are then forwarded to the EC, which considers the recommendation, makes any changes it deems necessary, and takes a vote. A recommendation must receive an affirmative vote of at least 67 percent from each applicable quadrant EC and 40 percent from each of the segments of the applicable quadrant(s).

After passage by the EC, the recommendation must be ratified by the NAESB members. An affirmative vote of 67 percent of the members of the applicable quadrant(s) is required for ratification. After ratification, standards and modifications are considered final actions and will be published in the next version of NAESB standards.

All NAESB quadrants follow the same development process described herein. The process has been followed by the WGQ since 1994 and has been used to develop more than five hundred standards that have been incorporated by reference into federal regulations.

North American Energy Standards Board  
Standards Development Process Flow Chart

### Flexibility

NAESB recognizes that flexibility is necessary as standards are developed to address regional concerns or to incorporate variances to accommodate operational or structural differences. Several WEQ standards incorporate regional or operational differences for both Version 0 and Version 1. There is a high threshold for incorporating such variances in a standard; the subcommittee(s) in drafting the standard, the EC in approving the subcommittee recommendation, and the membership in approving the standard must all agree that such variance is necessary. Nonetheless, NAESB procedures are well suited to take into account operational and regional differences.

### Transparency

All NAESB meetings are open for attendance and participation by any interested party, with the exception of executive sessions of the Board or Managing Committee for purposes of discussing personnel, compensation or legal issues. Meeting announcements and agendas are posted in advance to permit the widest possible participation. Conference-calling capability is available for all meetings and web casting is available for most. Those intending to attend a meeting in person or by telephone are asked to notify NAESB by a specific date to permit adequate meeting planning.

Transcripts are made of all Board of Directors and EC meetings, and may also be made of other meetings that are expected to be controversial. Transcripts are maintained in the NAESB office and are provided to regulatory agencies for their internal use. All other interested parties can purchase transcripts from the relevant transcription service.

### Coordination with NERC

For business practice standards development for the WEQ, if it is determined by NERC and NAESB Executive Management that joint development is needed by NERC and NAESB, the NERC-NAESB Coordination Joint Development Process is implemented.<sup>1</sup> This process requires that the appropriate NAESB Subcommittee and NERC Standards drafting team work together to develop reliability standards and business practices.

The Joint Interface Committee of NAESB, NERC and the ISO-RTO Council (“JIC”) was dissolved as part of the agreement to create the Independent Grid Operator segment of the WEQ. The joint development process between NAESB and NERC is being used to ensure appropriate coordination. The ISOs and RTOs have strong decision-making roles in both NERC and NAESB, and thus with the use of the joint development process, the JIC was no longer necessary.

### Accessibility of Standards and Work Products

The NAESB standards and protected work products are accessible to members at no cost as a benefit of their membership. Non-members can purchase the standards as a full version, or they can purchase individual final actions. Non-members can also access the standards at no cost by requesting an evaluation copy. NAESB standards and protected work products are copyrighted. Non-members can download a NAESB materials order form from the NAESB web site for ordering standards or for instructions on accessing standards for evaluation.

## **Procedures for Minor Corrections as excerpted from the NAESB Operating Procedures**

### D. Minor Clarifications and Corrections to Standards

Minor clarifications and corrections to existing standards include: (a) clarifications or corrections made by a regulatory agency to standards that are of a jurisdictional nature, or by the American National Standards Institute or its successor; (b) clarifications or corrections to the format, appearance, or descriptions of standards in standards documentation; (c) clarifications or corrections to add code values to tables; and (d) clarifications and corrections that do not materially change a standard.

Any request for a minor clarification or correction to an existing standard should be submitted in writing to the executive director. This request shall include a description of the minor clarification or correction and the reason the clarification or correction should be implemented.

#### 1. Processing of Requests

The executive director shall promptly notify the EC and any appropriate subcommittee(s) of the receipt of the request. The members of the applicable quadrant's EC shall promptly determine whether the request meets the definition of a minor clarification or correction. Through the decision of the vice chair of the applicable quadrant, this determination may be delegated to one of the quadrant's subcommittees, with the concurrence of the subcommittee chair, in which case the subcommittee shall make a prompt decision.

If the request is determined to meet the definition of minor clarification or correction, the applicable quadrant's EC, with input from any subcommittee(s) to which the request has been forwarded, shall act on the request within one month of its receipt. A meeting to discuss the request is not required; the decision may be made by notational vote. A simple majority of the votes received shall determine the outcome. The members of the applicable quadrant's EC shall be given at least three working days to consider and vote on the request.

#### 2. Public Notice

The results of the vote on the request for a minor clarification or correction shall be posted on the NAESB website and the members of the applicable quadrant shall be notified of the request by e-mail. If the request has been approved by the applicable quadrant's EC, the notification shall include a brief description of the request, the contact name and number of the requester so that further information can be obtained, and the proposed effective date of the clarification or correction. The proposed effective date of the minor clarification or correction shall normally be one month from the date of the public notice.

Any interested party shall have an opportunity to comment on the request, and the comments shall be posted on the NAESB website. The comment period is two weeks.

### 3. Final Disposition of Approved Requests

If no comments are received on an approved request, the standard shall be clarified or corrected as specified in the approved request on the effective date proposed. If comments are received, they shall be forwarded to the members of the applicable quadrant's EC for consideration. Each comment requires a public written response from the applicable quadrant's EC. The applicable quadrant's EC shall determine whether changes are necessary as a result of the comments.

Members of the applicable quadrant's EC shall be given three working days to consider the comments and determine the outcome, which shall be decided by a simple majority of the votes received. A meeting to discuss the request is not required; the decision may be made by notational vote. The standard shall be clarified or corrected in accordance with the outcome of the vote, effective with the completion of voting, and notice thereof shall be posted on the NAESB website.
