SCRAPIE PEMMP INSPECTION REPORT

Flock ID	Owner Name, Address, and Email Address	Flock Location if Different	
Premises ID			
Telephone			
Inspector		Inspector ID	County
Inspection Date	PEMPP Start Date	Latitude	Longitude

Type of PEMPP

- () Basic (no high risk animals retained) () Infected/Source-Retained QQ Ewes
 () Trace Flock-Retained Exposed QQ Ewes () Nor98-like Scrapie
 () Valine Assoc. Infected/Source-Retained AVQR Ewes () Other _____

Type of Operation (check all that apply and circle primary activity)

- _____ Breeder (seed stock)
 _____ Commercial (breeder)
 _____ Club Lamb
 _____ Feeder
 _____ Dairy
 _____ Other _____

Veterinary Practitioner Name

Species

Predominant Breed(s)

INVENTORY	SHEEP	GOATS
Adult males (≥ 12 mos)		
Adult females (≥ 12 mos)		
Males (<12 mos)		
Females (<12 mos)		
Wethers (<12 mos)		
Wethers (≥ 12 mos)		
TOTAL		

YES	NO	NA	INSPECTION CHECKLIST
If "No" for any item, explain in comments.			

1.				Sheep and/or goats inspected and found free of scrapie
2.				Clinical signs suggestive of scrapie observed by the producer or inspector (check all that apply): () No clinical signs of scrapie () Excitable, aggressive, or other abnormal behavior () Incoordination () Nibbling and licking movements () Weight loss () Convulsions () Intense itching/rubbing with wool loss () Skin abrasions, from rubbing () Involuntary muscle tremors () Other (describe): _____
3.				Animals exhibiting signs of scrapie or found dead at over 14 months were immediately reported to a State or APHIS representative.
4.				Written or computer records kept documenting the following:
4a.				Application of Official ID to all animals ≥ 12 months of age in the flock and animals that have left the premises except as permitted for animals in slaughter channels under 12 months of age. Type(s) of Official ID used: _____.
4b.				Acquisitions – official ID, date of purchase, name and address of the person from whom the animal was acquired and all identifying marks or tags on the animal.
4c.				Animals Removed – official ID, date of removal, and the name and address of the person to whom the animal was transferred.
4d.				Deaths – official ID, date of death, and cause of death if known. Record of submission for scrapie testing of obex and lymph node from animals that died at over 14 months of age.
5.				Exposed QR or RR ewes that were not removed or redesignated as part of the flock plan are retained until they die, are slaughtered, or are euthanized, and tissues are submitted from these sheep for official testing as directed by APHIS or the State.
6.				Number of restricted exposed QR or RR ewes (from #5) remaining in flock _____.
7.				Number of sire rams by genotype: RR _____ QR _____ QQ _____ Unknown _____.
8.				Discussed notification and tissue submission procedure for testing animals that die at over 14 months of age.
9.				Animals designated for testing are retained until they have a valid ("PrPsc not detected") live-animal test result, or until they die or are euthanized and have tissues submitted for official testing.
10.				Exposed ewes with QQ genotype retained in flock (if YES complete 11-21; if NO skip to 22).

******ALL FLOCKS RETAINING EXPOSED QQ or Other Genetically Susceptible Exposed SHEEP******

11. Additional Recordkeeping Requirements Met

	YES	NO	NA	
11a.				Sex.
11b.				Species and breed (or cross), and if unknown, face color (sheep) or type (goats, i.e. meat, dairy, or fiber).
11c.				Date of birth or estimated month and year of birth.
11d.				Sire's and dam's official and any secondary ID numbers, including registration number (if known).
11e.				Offspring's official and any secondary ID numbers, including registration number (if known).
12.				Documentation that all genetically susceptible exposed ewes that were not removed as part of the flock plan were bred only to RR rams while on the PEMMP.
13.				Documentation that all genetically susceptible exposed ewes that were not removed as part of the flock plan, and in the case of previously infected/source flocks any susceptible ewes that were added to flock while on the PEMMP and before all exposed ewes were removed, were retained until they died, were slaughtered, or were euthanized, and tissues submitted from the sheep for official testing.

******TRACE FLOCKS RETAINING EXPOSED QQ or Other Genetically Susceptible Exposed SHEEP******

	YES	NO	NA	
14.				Number of Exposed QQ sheep remaining in the flock _____
15.				Animals that were born after the high-risk animal lambing are sold only direct to slaughter unless they are negative on live-animal test at over 14 months of age or have been genotyped and are RR or QR at codon 171. (The offspring of an RR ram, when only RR rams are present on the premises, meet this requirement.)

******PREVIOUSLY INFECTED/SOURCE FLOCKS RETAINING EXPOSED QQ OR OTHER GENETICALLY SUSCEPTIBLE EXPOSED SHEEP******

	YES	NO	NA	
16.				Number of Exposed QQ sheep remaining in the flock _____
17.				Sexually intact female sheep that are of unknown, QQ or other susceptible genotypes and female goats are only removed from the premises by permit for slaughter, destruction, or research. (When only RR rams are present on the premises, offspring are considered R? sheep if they have not been genotyped.)
18.				No female goats have been added to the flock by purchase or natural addition until all genetically susceptible exposed ewes have been removed or this plan completed.
19.				After each lambing, placenta and bedding are disposed of by burial, incineration or composting in an area to which animals do not have access.
20.				Confined lambing facilities are cleaned at the conclusion of the lambing season in accordance with the guidelines published in the Scrapie Flock Certification Program standards.

21. Genetically susceptible ewes which are retained or are acquired

21a.				Are live-animal tested and found negative at over 14 months of age and prior to lambing. NOTE: Susceptible sheep added to the flock after completion of the flock cleanup plan are to be tested at owner expense.
21b.				Are maintained separate and apart from the rest of the flock.
21c.				Are identified with at least two forms of official ID including the APHIS provided EID.
21d.				Only double tested RR rams are kept in the separate area where genetically susceptible ewes are maintained. (Male animals born in the area where genetically susceptible ewes are maintained must be castrated or removed to another premises before they reach sexual maturity.)

22. Comments (if more space needed, use an attached sheet):

Flock Owner Signature	Date
Inspector Signature	Date
